

RADSAFE® Sterile Tattoo Ink - Black

RADSAFE® Inks were designed to identify fields as part of a radiation therapy protocol.

Presented in a monodose crimp of 0.5 ml, with a frangible opening, these inks are sterilized by gamma irradiation at a dose greater than 25 kGy.

These inks do not turn blue and fade with time.

Batch number engraved on each single dose guarantee traceability.

Available in quantities of 100 or 50.

Product Benefits

- Does not contain impurities
- Composition is known (ingredients must be known, even for artistic tattooing)
- Biocompatible
- Certified CE class IIb
- Sterile single use
- Markings are NOT permanent and DO NOT turn blue
