Places of Worship solution

## Adjust Lighting for Worship and Gatherings

### Background

Weekly and holiday services, choir practice, community meetings – places of worship serve their congregations in a variety of ways. The lighting should easily provide the right level and atmosphere for any purpose.

### Challenge

Services, meetings, and special occasions can be enhanced by creating unique lighting scenes for different activities. This requires control for multiple zones of light, so the space can be flexible while still reducing lighting energy costs. Ornate sanctuary design and architectural complexity can make installation difficult – wireless helps solve installation issues.

### Opportunity

Utilize versatile, energy-saving light control strategies to provide simple scene selection, enhance the quality of light, and reduce costs to create the right environment for any activity or occasion. Touchless controls help reduce risk, provide remote control from podiums, and enable automated occupancy or timeclock-based control.

## The Solution

Vive by Lutron is a simple, flexible, scalable lighting control solution, for new and existing buildings, built on a proven wireless platform. [lutron.com/vive](https://lutron.com/vive)

## Why Vive — Work Smarter, Not Harder

### Save time.

Quick installation time – 70% faster than wired control solutions – means shorter timelines and lower costs. Controls install quickly, and you can typically complete a job in one day or overnight with no rewiring necessary.

### Meet code. Meet your needs.

Vive has simple, code-compliant solutions for your worship space. Put the right controls in each area, and connect them all with just one system.

### Proven technology – it just works.

Millions of wireless systems have been installed in churches, synagogues, mosques, and other worship spaces around the world, backed by industry-leading quality.

### Solve problems. Adjust effortlessly.

Simple software, available on your phone, allows you to re-program or adjust settings from anywhere. And Vive evolves with you, allowing you to make changes in your wireless setup without rewiring and helping you adjust to new standards.

### Easy to grow. Simple to manage.

With Vive, you can start with one area, like the sanctuary, and add additional spaces in the building over time without any rewiring required. With the Vive app, easily make changes to lighting, see alerts on low battery warnings, and modify settings without calls to the manufacturer.
