

The deugro Customer Service Portfolio

deugro visiotrack

deugro visiotrack

For successful supply chain management, having all milestone information available is of utmost importance. Our deugro visiotrack tool provides you with exactly that: A complete overview of all data at all times to ensure quality, process efficiency and ongoing communication between all parties involved.

Because deugro understands the significance of having all project information available for successful supply chain management, our experts have developed deugro visiotrack.

This high-quality digital platform continuously provides you with a complete overview of all data—to ensure quality, process efficiency and effective communication between all parties involved.

This Web-based supply chain management system has been created by software architects on the basis of the profound knowledge and experience of deugro experts from various industries. The system offers instant and secure 24/7 global access to all information related to items and shipments, controllable via customizable dashboards.

The easy-to-read dashboards present an overview of deugro visiotrack at a glance. At the same time, the dashboards provide more in-depth information as required by simply selecting the desired

variable. These insights enable transparency throughout your entire supply chain.

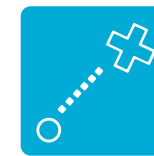

deugro visiotrack offers full budget control and facilitates both predictive analytics and solid financial forecasting. Identifying potential cost and time savings optimizes your supply chain, and possible challenges can be addressed before they ever occur.

KPI reports and their details can be extracted and displayed in the Excel or Word format for additional use.

The interactive nature of deugro visiotrack allows all users to view their individually authorized dataset. This warrants a seamless integration, with or without EDI, into your existing system landscape, with a fully enriched insight into procurement, logistics and transportation. Interfaces can be developed to connect other service sites such as marshalling yards and consolidation/packing centers. deugro visiotrack supports both standard barcodes and QR codes,

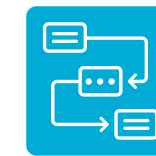

Improved efficiency

Tracking function

Increased consolidation

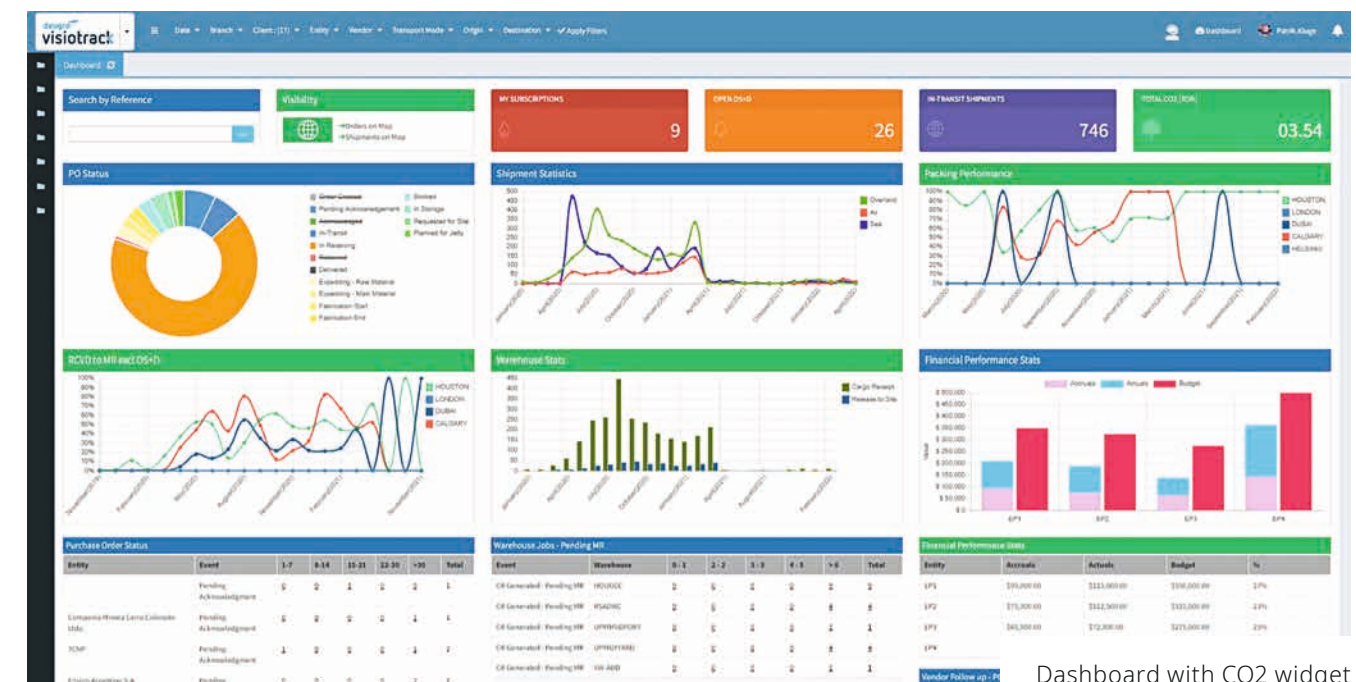

Process optimization

Protected user login

Enhanced visibility

Dashboard with CO2 widget

which are printed on documents created by the system, such as booking confirmations, delivery slips, package labels, item tags and packing lists.

Through deugro visiotrack, deugro's overseas offices are able to manage the entire sourcing process of supplies on a global scale.

Carbon emissions

As part of deugro's commitment to providing innovative logistics solutions to support global CO₂ reduction, and in line with deugro's social responsibility for a net-zero future, deugro visiotrack shows the overall CO₂ impact of a trade lane based on a transparent and compliant calculation methodology.

This enables users to record, report and potentially identify CO₂ reduction targets and to optimize routings. In this way, alternative solutions for carbon reduction can already be calculated during the transport planning phase based on the identification of intelligent routes and modes of transportation, the optimal utilization of transportation mode capacities, and the forward-looking design of transport schedules.

Main Features

Dashboards

Performance and data analysis
Complete overview through customizable dashboards, role-specific information and selectable graphical representation

Cost analysis and reporting
Spend overview broken down per transportation mode / entity / charge code, spend forecast based on historic data, tracking spend for logistics services versus the predefined annual budget

Tracking and reporting
Shipment status through elastic search and premapped milestone plan, with achieved milestones outlined

EDI

Latest API technology, milestones, project-specific integration with defined carrier subset, freight invoicing and payment, and warehousing

Order Management

Automation and visibility for all orders, expediting, fully customizable standard event subset, and third-party engagement with e-mail tokens

Material Management

In/Outbound part planning, comparison to baseline and evaluation of performance

Storage Management

Hub barcoding and RFID integration
Easy handling through compatibility with any RF scanner with Internet access, local printing of barcode labels and documents possible

Yard and port management
Configurable and dynamic processes and workflows, yard and vessel planning

Application

Instant 24/7 global access to information and tracking related to items and shipments, iOS- and Android-based

CO2 Emissions / Carbon Footprint

Display of emissions of freight transports worldwide based on transparent and compliant calculation methodology tool

The key benefits of our IT solution

- Global 24/7 access for our clients and all deugro offices worldwide via the Internet
- Receiving/downloading of pre-alerts and photo reports
- Reduced shipping and overhead cost
- Reduced errors by avoiding manual duplication of data
- Ability to interact between clients, suppliers, subcontractors and deugro
- Supply chain transparency from source to consumption
- Container and item level tracking
- Predictive analytics covering material shipments spent and CO₂ emissions

» deugro visiotrack bridges the gap between broad accessibility for various contributors and maintaining a secured and controlled environment for your sensitive data. «

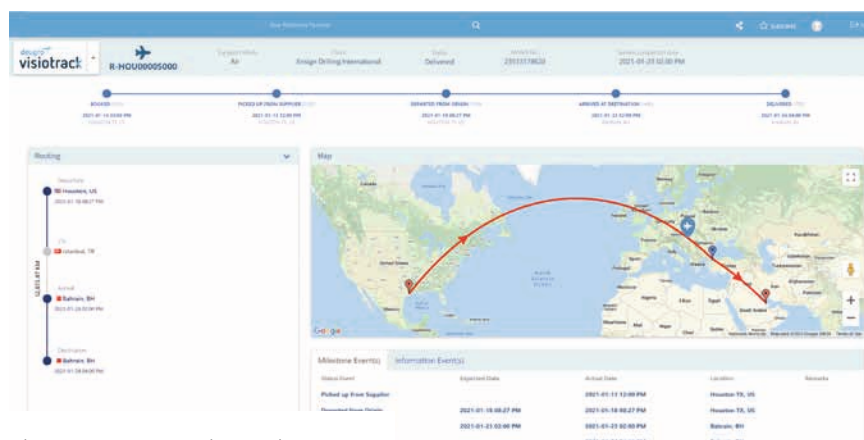

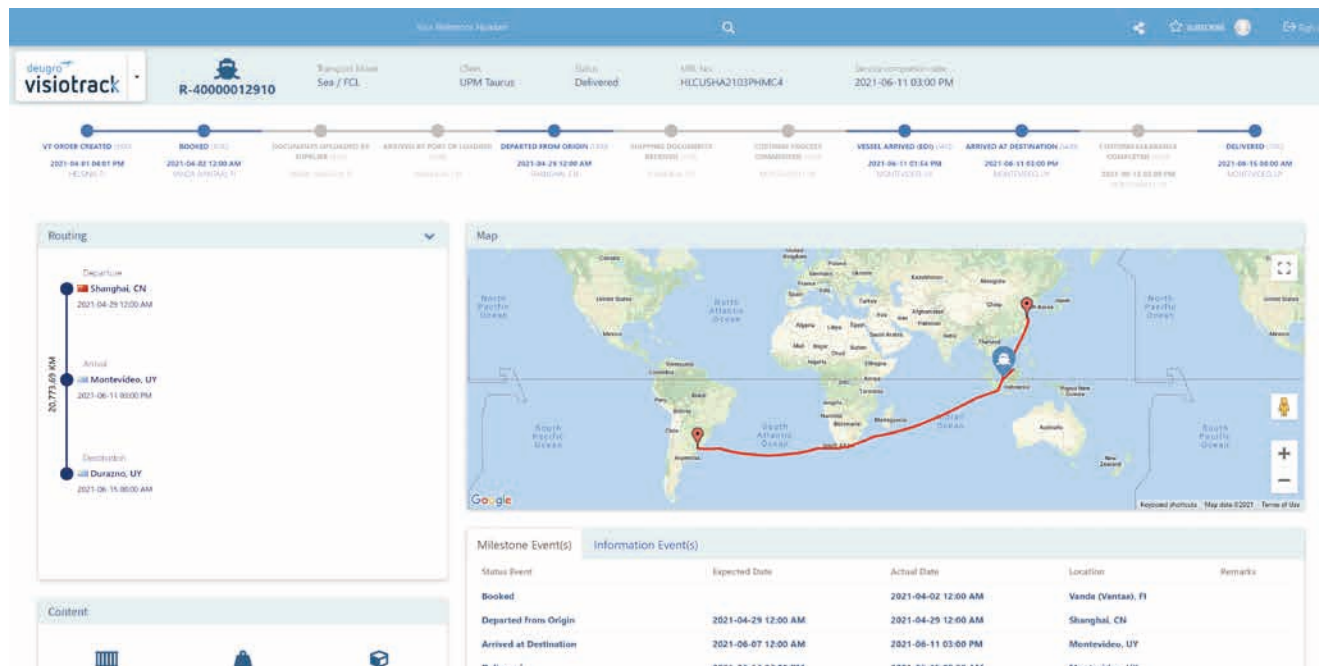

Why do you need deugro visiotrack?

The state-of-the-art IT system deugro visiotrack offers real-time logistics for the supply chain contract and is a valuable tool for budget control and financial forecasting.

This Web based management system provides clients with instant 24/7 global access to all information and documentation related to their items and shipments.

By using deugro visiotrack, you benefit from:

- Process optimization
- Improved efficiency
- Enhanced visibility
- Increased consolidation
- Risk reduction
- Cost savings

Shipment status through elastic search and pre-mapped milestone plan

deugro tracking

The track and trace feature in deugro visiotrack provides an overview of milestones as well as data on distance traveled.

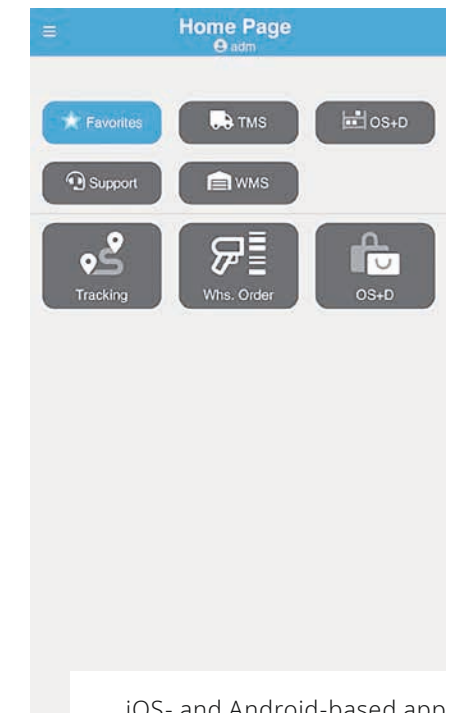

The tracking allows users to obtain real-time shipment information without logging in.

The built-in functionality enables users to interact and communicate with clients directly using the embedded “Share” button, which sends the tracking link by e-mail, chat function or individually preferred messaging systems.

To further the universal nature of deugro visiotrack, information can be shared using common office software standards.

The deugro visiotrack app—available for all iOS- and Android-based mobile phones—expands the versatility of deugro visiotrack with true mobile access to information and functionality, such as the scanning of barcodes or QR code labels and the uploading of pictures and documents, all to support the mobile workplace.

iOS- and Android-based app for instant 24/7 global access

Worldwide support team

We believe it is important to be close to our customers and offer customized services.

For this reason, we established a global customer solutions team that focuses solely on creating client solutions and on providing support of deugro visiotrack.

Present in each region of the world, we offer you quick response times and tailor-made configurations.

“In an ever-changing environment of sourcing, transportation and logistics, it is imperative to have real-time information and accurate predictability to satisfy

your customers’ demands. deugro visiotrack bridges the gap between broad accessibility for various contributors and maintaining a secured and controlled environment for your sensitive data,” says Mario Hess, Global Head of Customer Solutions – deugro visiotrack, deugro.
