ABOUT US

Our DNA

WHO ARE WE

Atelier 7 Architects LLC. is a unique architectural practice which specializes in using shipping containers, modular systems, and prefabricated building systems for bespoke retail, office, and residential projects. Established in 2016, our goal is to become “Disrupters” of the built environment; to deliver a solution that contributes to the fulfillment of real human needs while complementing the natural environment.

Design Principles

The name “Atelier” is coined from the French word for ‘workshop’ or ‘studio’ approach to our work, as we strive to embody the ideals of a collaborative workspace. The number “7” represents the ideals we carry forth on the projects we execute.

01.

Having the curiosity to explore the unique and full potential of every opportunity

02.

Include our clients and industry experts as welcomed collaborators

03.

Desire to research, explore, design and deliver the best

04.

Seek a creative harmony between the object and the environment

05.

As creative thinkers, seek alternative and atypical project solutions

06.

Make great design accessible

07.

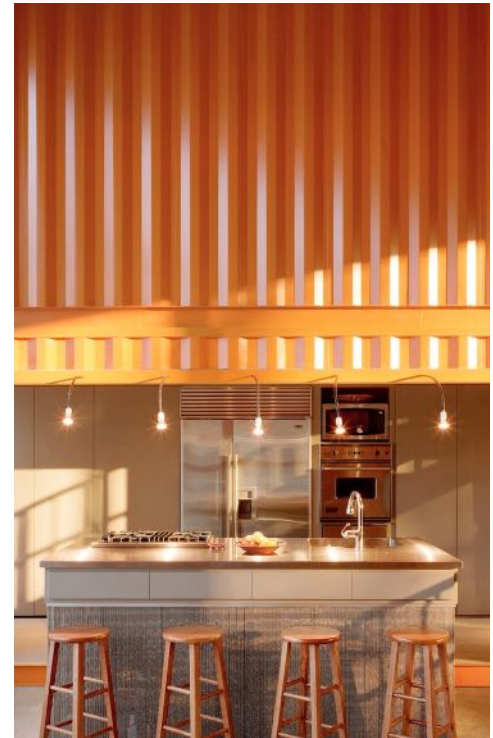

Conviction to bring the best solutions to life

Our practice is a democratic workshop where everyone's opinion matters. Ideas are allowed to be free-flowing and decisions made together.

Innovation is essential to our design process and we undertake extensive R+D in technology, market trends and fabrication processes.

We employ **Building Information Modeling** (BIM) from the outset on all projects. Our digital design and development prowess is rooted in each partner.

ABOUT US

Our Philosophy

We explore the unique potential of every design brief to find the best solution for each individual project. We are guided by our mission to create innovative places, spaces and buildings that exceed our client's expectations.

Sustainability

With sustainable practices as a mainstay of our daily work, Atelier 7 provides renewed life to retired sea shipping containers, reducing waste by up-cycling the steel structures and embodying them with new life and a new purpose. Our work on a 'Kintsugi' philosophy, by highlighting or emphasizing the imperfections of the past through the mending and additive use of other materials to celebrate the whole.

In combination with our minimalist designs and use of recycled products, we make our contribution towards protecting the environment. Atelier 7 also uses a wide variety of recycled and eco-friendly materials to personalize the interior and exterior of our work, in addition to integrating systems that reduce energy consumption. We want to do our part for society by building sustainable spaces.

We provide vision and strategy planning, full design services, assistance with fabricator selection and coordination, contractor selection, and construction oversight.

Shipping Container Living

Atelier 7 utilizes factories around the United States and Canada. Our five years of experience building relationships within this industry makes a difference.

OUR TEAM

Anthony Pope

Co-Founder, Principal, Designer, Influencer

Tony is founder and design principal for Atelier 7 Architects, a firm nationally recognized for its innovative use of shipping containers to create places that are personal, beautiful, comfortable, and conceptual; a designer of iconic spaces that express the sense of place, through the use of color, materials, and expressive forms with unsurpassed attention to detail. His investigations into modular and prefabricated structures led to the award winning iVillage @ MLK, the first shipping container park in the City of Atlanta and State of Georgia.

Tony has been one of Atlanta's distinct **emerging voices** in architecture and his work has led to numerous awards including recognition from the Associated General Contractors, Design Build Institute, Metal Building Association, NOMA, Georgia Minority Business Association and was a 2018 finalist for the Enterprise Rose Fellowship. Tony is a current board member with the MicroLife Institute.

Tony grew up in Washington, DC and received a Master of Architecture degree from the University of Nebraska-Lincoln, a Bachelor of Architecture degree from Virginia Tech and currently pursuing a Master of Real Estate Development from Georgia Tech.

We seek to design beautiful buildings that break traditions, embrace consequences, expand opportunities and embed qualities that go beyond its original purpose.

Anthony Pope, Atelier7 Principal

Need help building with shipping containers?

Designing and developing a custom sea container house might be challenging. Schedule a pre-design consultation call. We'll only need 30 mins of your free time.
