Connected Manufacturers use Cloud to Tie Data Together

Fully connected enterprise delivers data points throughout the enterprise

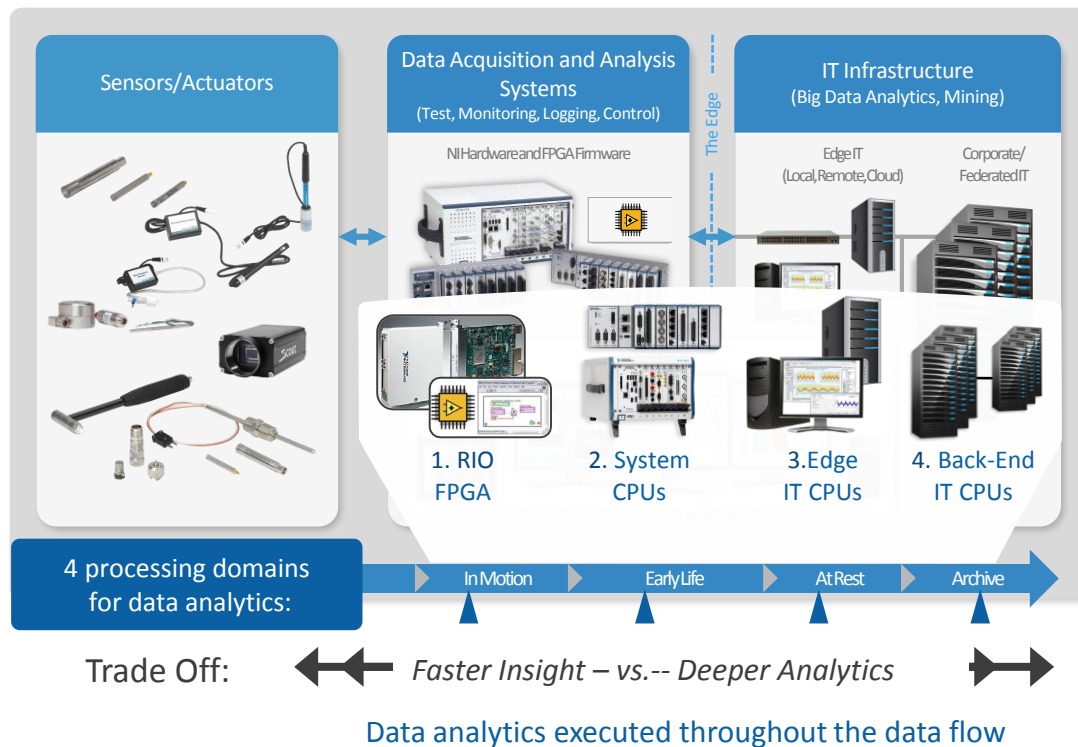

Manufacturing is the #1 IoT Opportunity

- \$1.2-\$3.7 trillion of economic impact
- IIoT isn't "technology looking for a problem" – this is a solution to existing needs

NI's End-To-End Solution Architecture for IIoT

NI's End-to-End Solution Architecture for IIoT

Shorter time for developing while product complexity increase

Time for testing

Product complexity

“Digital twins are becoming a business imperative, covering the entire lifecycle of an asset or process and forming the foundation for connected products and services. Companies that fail to respond will be left behind.”

Thomas Kaiser, SAP Senior Vice President of IoT

“For every physical asset in the world, we have a virtual copy running in the cloud that gets richer with every second of operational data

Ganesh Bell, chief digital officer and general manager of
Software & Analytics at GE Power & Water

**Digital twin Explosion:
billions of twins in next five years**

Digital twin: what ?

A digital twin is a real-time digital replica of a physical device.

A digital twin is a real-time digital replica of a physical device.

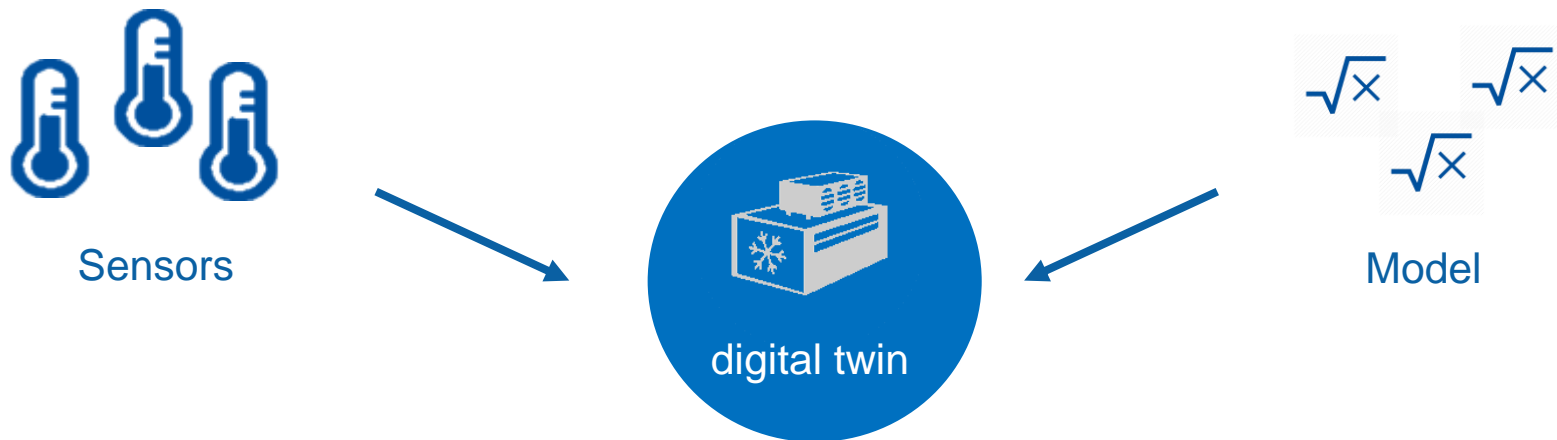

chiller

chiller
digital twin

It's more than a model

A digital twin is a real-time digital replica of a physical device.

A simple digital replica ?

History
Log the device history

Future
Forecast device future

A bridge between **the physical** and digital **world**

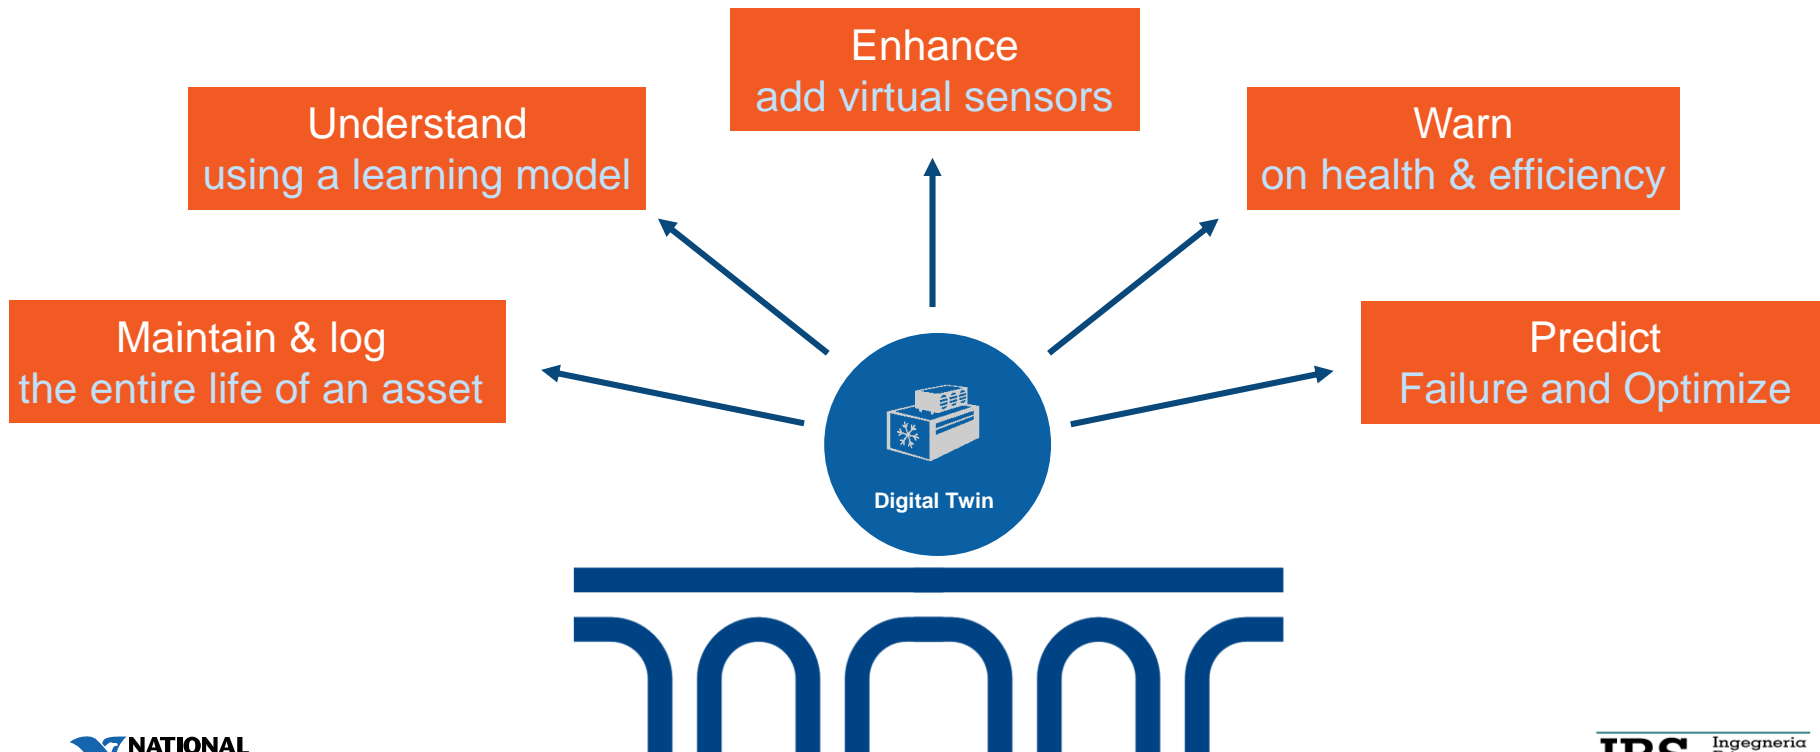

A bridge between the physical and **digital world**

A bridge between the physical and digital world

A bridge between the physical and digital world with Value and ROI embedded

Embedded Digital Twin

A Digital Twin is a **real-time** digital replica of a physical device

It is a bridge **between the physical and digital world.**

It is **more than just** a digital replica

Example of embedded digital twin for product testing

Shorter testing time

Better accuracy and quality

Physical end-of-line-testing

The chiller cannot be fully tested in production end of line

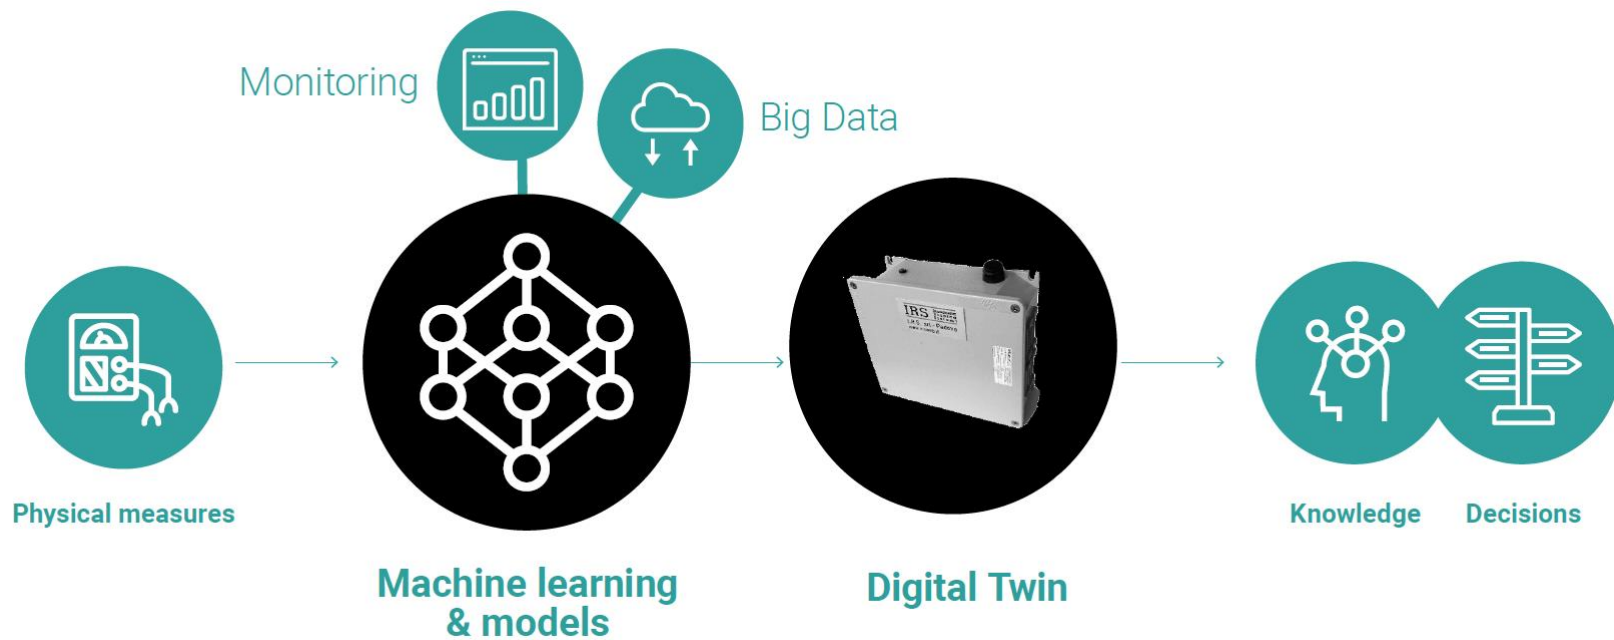

Digital Twin
Virtual end-of-line-testing

Thanks to the digital twin, virtual conditions are verified

Testing in unfeasible conditions

A platform ready for change

Productive Software

Our extensive portfolio of software, from LabVIEW to TestStand, helps you translate your programming ideas into reality, reduce project development times, improve system performance, and deliver business insights based on collected data.

Flexible, Modular Hardware

NI modular hardware, which ranges from high-performance RF instrumentation to low-cost measurement devices, has flexible I/O that helps you to reconfigure hardware in software and avoid buying new equipment every time application needs change.

Seamless Integration

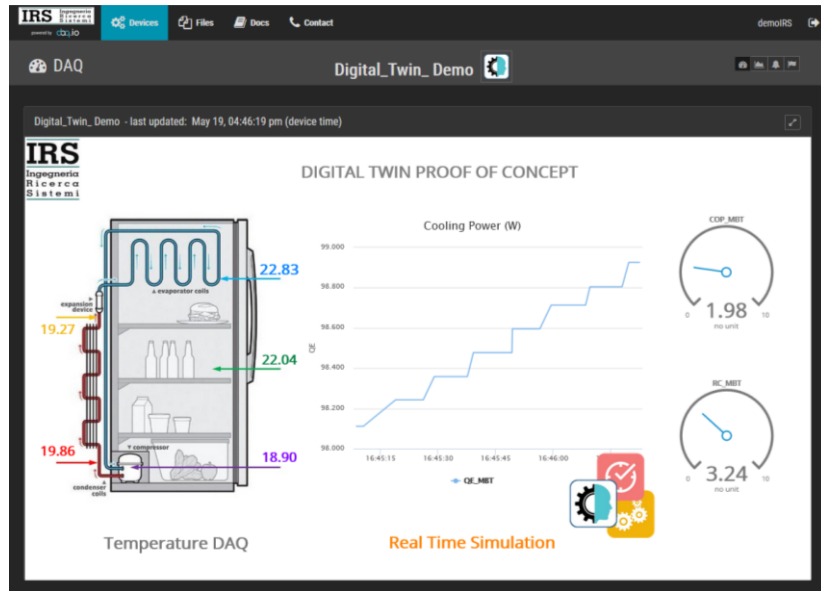

With seamless integration of flexible hardware and productive software from one vendor, you can design measurement and control systems more rapidly. NI software and I/O hardware work together so you can stop sweating the details and focus on designing better systems faster.

Openness and Interoperability

The openness and flexibility of the NI platform allows you to choose to use NI software and hardware or third-party tools in multiple different combinations. You can accelerate your system design to reduce complexity, innovate faster, and continually integrate new technologies based on the tools that you prefer.

From monitoring to embedded digital twin

1. Lifelong Device history
2. Real time model computed virtual sensor
3. Real Time predictive alert

Real time online
measurement platform

Machine learning models

TwinMind®

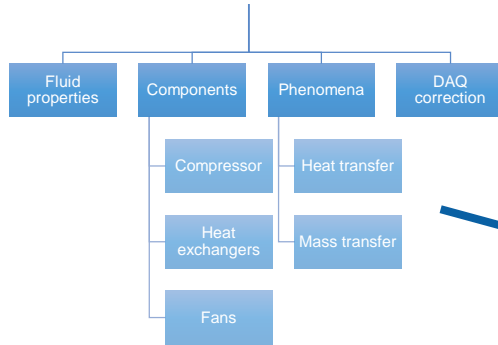

CompactRIO
Single-Board inside

A twin using model technology 4.0

Model technology 4.0

Physical Model

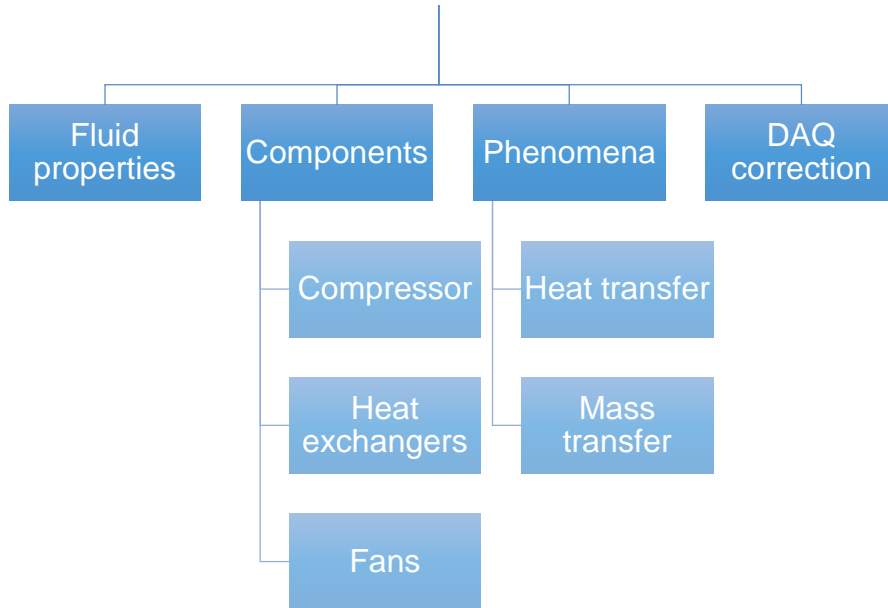

Machine learning

Physical Model

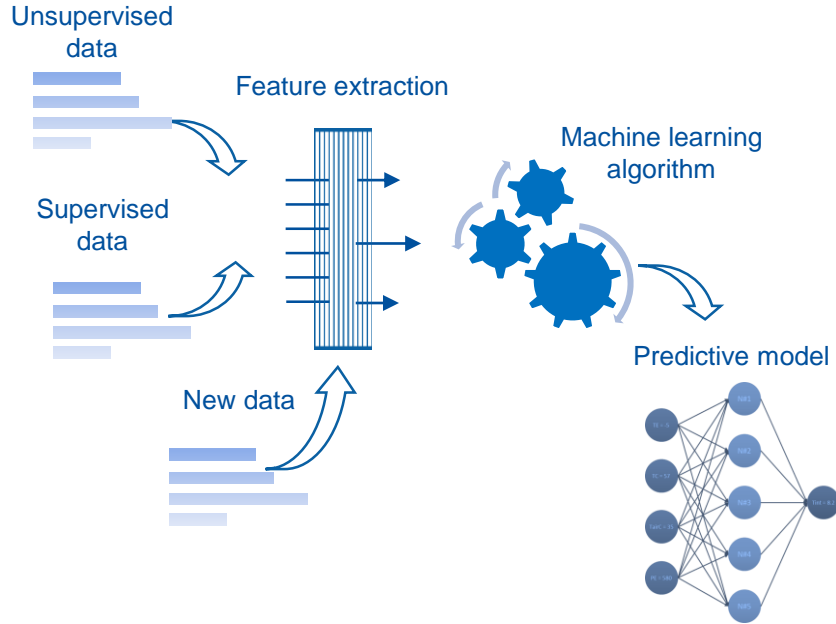

Physical Model

The phenomenological model,
based on equations,

can identify the causes of
a possible malfunction

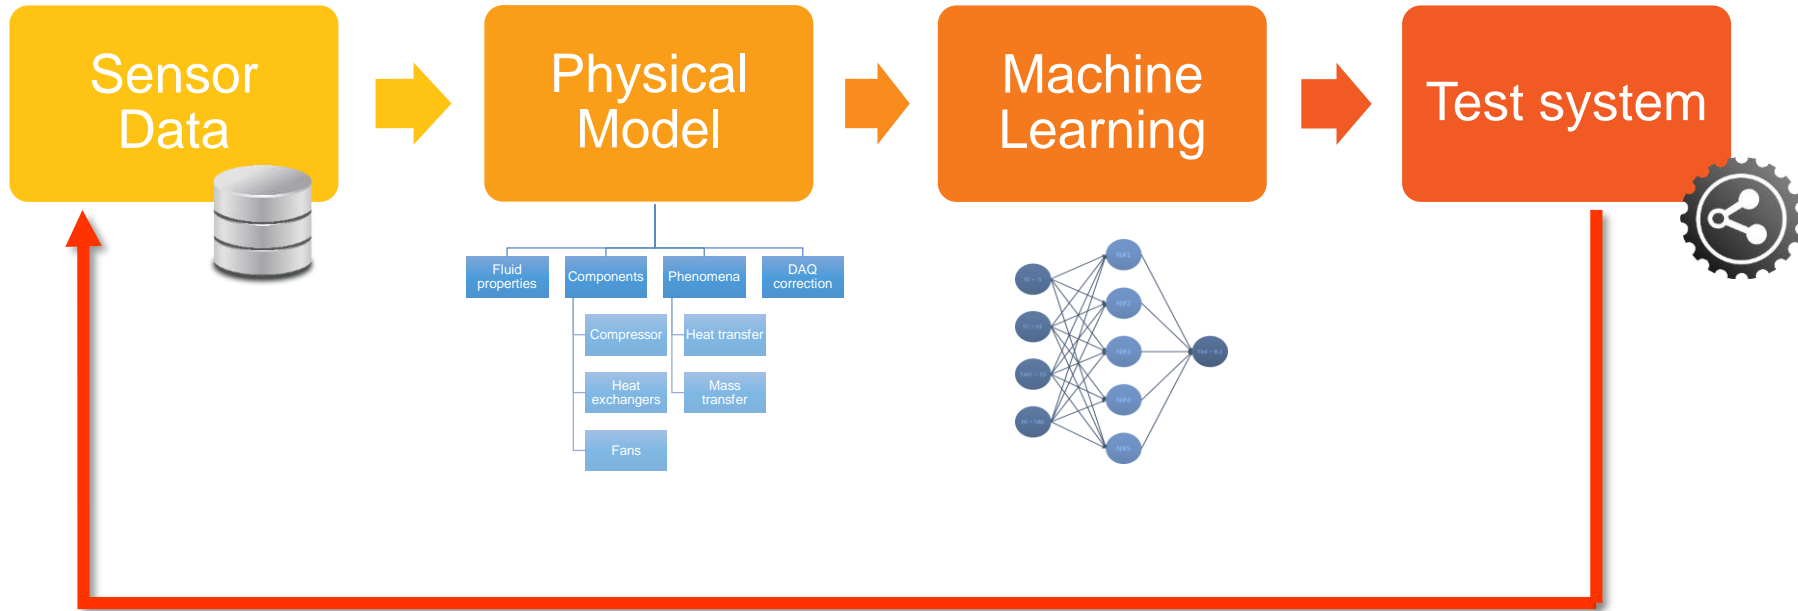

Machine learning

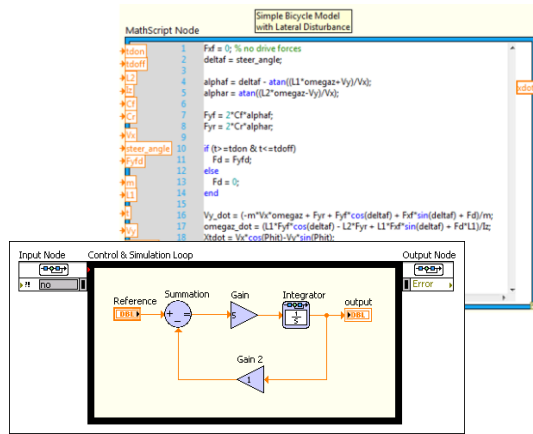

The machine learning approach needs no detailed knowledge about machine operation.

It needs a learning phase to be able to predict the system performance.

Diagnostic detail and easy implementation

Merging model technology using NI platform

LabVIEW Machine Learning Toolkit

Test systems for fridge testing on 100 % production

- NI CompactRIO testing 4 appliance simultaneously
- Sensor optimization
- Digital twin for shortening testing time

Conclusions

Lower complexity, reduce development time, and add machine learning to your IIoT device using NI platform and digital twin technology

Thank you for your attention.
