

The ONE STOP solution for all your blockchain needs

What drives us ?

To be a leader in modern distributed database applications (DAPPS) for government, corporate, and defence sectors using blockchain technology. Our framework ensures maximum data and user protection through military grade encryption.

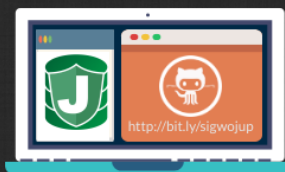

Why our blockchain ?

- Data is always **encrypted**
- Automatic data **replication** across nodes.
- Data is **immutable**, nodes are easily replaced.
- **Accountability** for information uploaded
- **Own your data and privacy**
- Say hello to your owned social sphere!

Our blockchain-ware

- The **Jupiter** software is the core.
- **Jupiter** powers the public blockchain, allowing anyone to participate.
- **Jupiter** can also be deployed in a private network for approved users only.

Our framework

- **Gravity** enables amazing **DAPPS** to be built on the Jupiter blockchain.
- **DAPPS** can be custom built to your specs, from basic data entry, encrypted group messenger to large scale logistics tracking or healthcare data systems.

Metis

Secure, always encrypted, group messenger

Metis was developed in response to the lack of a simplistic group messaging service which supports end to end encryption. It also demonstrates the versatility of the Gravity framework for developing on the blockchain. Metis is aimed at anyone who wants to regain their privacy while communicating! With built-in payments, Uniswap markets, and future enhancements, Metis is a win!

Metis features:

- double 'always on' end to end military grade encryption
- user accounts are secured with 2 private credentials with optional 2FA
- built-in Uniswap markets, payments, and crypto wallet for easy transfers
- credentials are exclusively in the user's control if there was no third party involved in account's creation.
- easy to use alias system; add your contacts to the group using their aliases.
- access Metis app via a web browser or mobile app (in development)
- Metis is available on the open access Jupiter blockchain at metis.gojupiter.tech
