

Gbp/Usd for January week starting Monday the 9th of January

Weekly is bullish on gu, we have got a weekly ifc down the bottom which is a nice target but not sure if we'll go down there yet

Daily is bearish and looking to see if we get up to the aily ifc or 50% or the imbalance to go lower but it might not stick

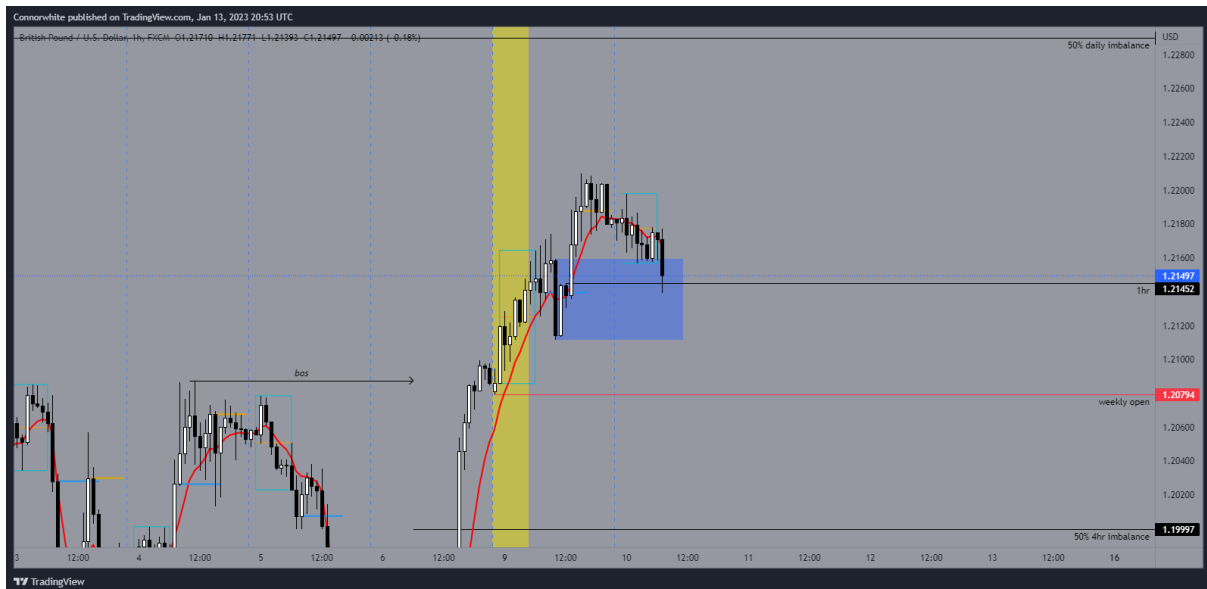

4hr is bullish, looking to see if we do pop down and re accumulate to go higher

No trade on Monday

Tuesday –

Price is bullish on 1hr in this range, ideally because of how bullish the 4hr is id rather a deeper retracement and we break 1hr low but the 1hr may stick

15min bearish but got massive trendline liquidity above to take so may be worth the punt on this

You may have been looking for re-accumulation out of here

Double 1min bos below lows, can target 15min extreme which is a 1min ifc

Tp hit 3%

15min bos now looking for re accumulation

1min bos targeting highs for 3%

Just shy of tp so may of cashed or got b/e

Wednesday –

Price is bullish on 1hr, price action is jank and lots of liquidity to upside to take

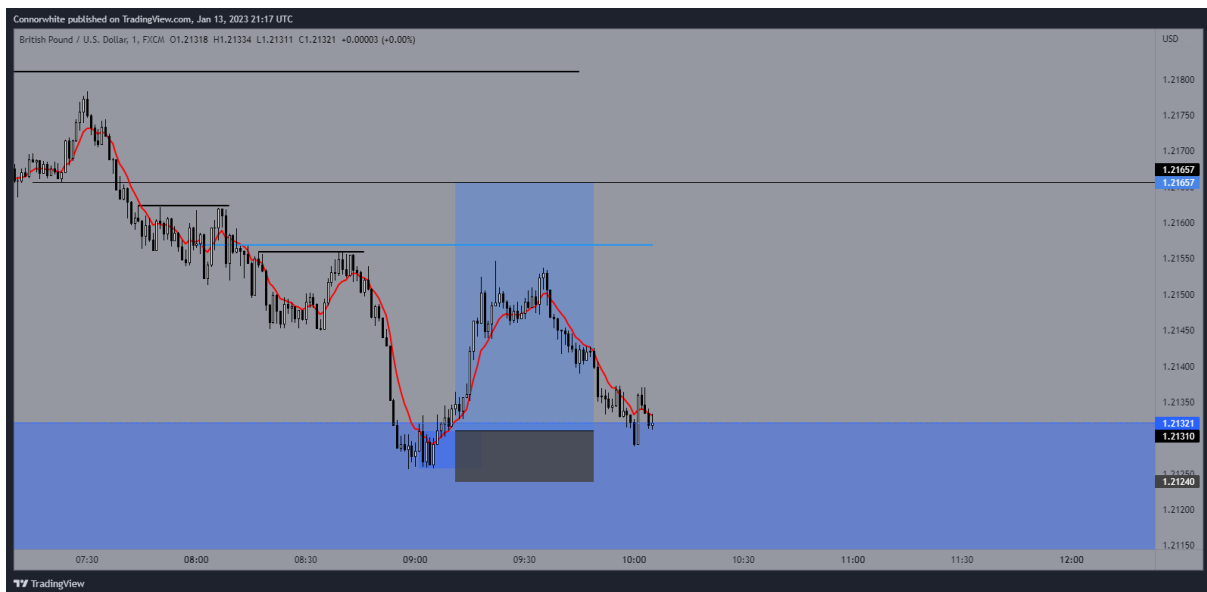

Price swept lows and come into 15min ifc

1min bos don't like the eqls below but just so you can see this is 1min accumulation in 15min area targeting highs and 15min ifc

Price done 3% then come b/e

Thursday –

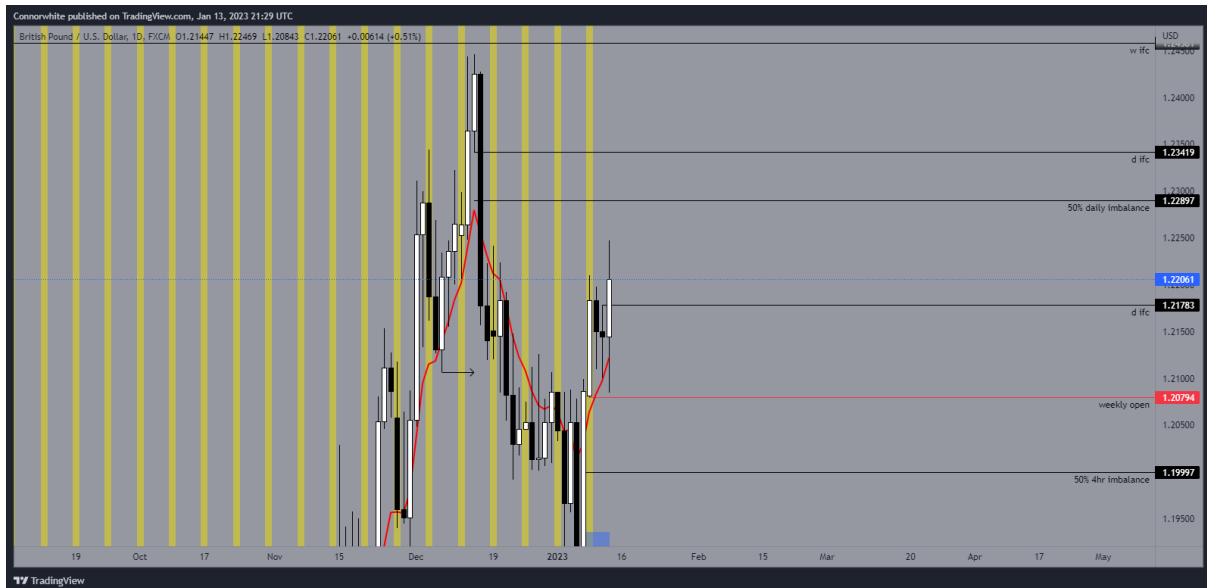

So price has broke to downside on 1hr, theres still loads of highs and cpi today so will be very careful

No trade today

Friday –

Daily engulfed so would like a pop down to push higher

Daily ifc got tagged 15min is bullish looking for a sell down to maybe the 15min ifc down the bottom for any potential buys

5min bos looking for re dsitro out of here

1mnin bos but got eqhs so its abit risky but selling down to London open for 5%

Tp smashed

week starting monday 16th of January -

The weekly imbalance fill is free to be filled in so would like to see if we get a retracement to expand higher

daily is bullish to but we have a daily ifc and 4hr ifc to target up the top to see if we do sell off from there or if we continue 4hr bullish trend and keep buying

4hr is bullish in this range so i am looking for re accumulation in the 4hr poi to go higher unless we break the 4hr structure out of this 4hr imbalance fill

on 1hr were in the same range as 4hr but got 80% and 50% marked up

so 15min is bearish and got the rally base rally marked up, but weve come to 80% of 4hr and broke on 5 so may be able to find some buys up

we broke on 5min, retraced to fill some imbalance and the start of the push now looking for re accumulation out of this 5min poi

1min bos can target london open 250 level for 3%

tp hit

15min poi had a 5min bos looking for entry off ifc as marked to target lows

goes b/e over the next day, but it did for 3% then come up so you couldve took out some if wanted as final tp was 4%

Tuesday 17th January

price has broke to upside on 15min, so looking for re accumulation inside of this poi to expand higher

1min bos inside 15min poi to target highs and liquidity

which is also like a 3min engulfing

tp smashed 4.5%

Wednesday 18th of January -

the 4hr is bullish so looking to see if we come into 4hr ifc and expand higher

1hr has created new range so seeing if we retrace into 1hr range or 4hr range to expand higher, would prefer the 4hr

15min and 5min is in this range so can look for re acumulation out of here just would be careful as price has exoanded alot and can see a retracement coming at some point today

can now see if we get re accumulation out of here following 5 and 15min order flow

1min bos inside area can target highs

also printed as a 3min engulfing

tp hit 4.2%

Thursday 19th of January -

4hr is in the same range, we started retracing towards end of the day but couldn't snag anything for sell down, so looking to see if we do retrace some more to then go higher

we didn't come into 4hr ifc but we have showed a 15min bos and were bullish so looking for re accumulation

this 3min poi inside the 15min range looks nice to see a reaction out of

we come into poi aftwr sweeping eqls, looking for anothe rre accumulation to get a smaller stop, if we come down now you can execute off ifc but i want a smaller stop so will wait

1min bos insdie area can buy here

also a 3min engulfing

tp smashed 3%

15min range bullish so looking for re accumulation out of here

1min bos which was 5min engulfing

but you can see 5min broke out of it but it wasn't nice price action there

got stopped out with news tho

left eqhs, lows been swept looking fo0r re accumulation out of here

1min bos buying here to target 750 level below 1hr ifc

also 3min engulfing

tp hit, may of took b.e tho, but when we broke range and come back in you couldve got in again. off this re accumulation on 5min and engulfing

Friday 20th of January -

we reacted out of 1hr ifc up the top and refined it to 5min poi which swept liquidity, don't like the eqhs so looking for some sort of re accumulation

got this 15min poi which follows order flow for potential re accumulation

price didn't give anything clean on Friday that ticked confirmations so no trade

this is how we ended though

Gbp/usd for monday 23rd of January –

weekly is bullish looking to see if we can retrace into filling one of the weekly imbalances in to go higher

daily is bullish and looking to take highs out

4hr were in this bullish range so may see a retracement into one of these demand zones

made new high on 4hr, can see if we can get sells down into 4hr imbalance

nothing clean on monday got direction right but couldnt snag anything

Tuesday 24th of January –

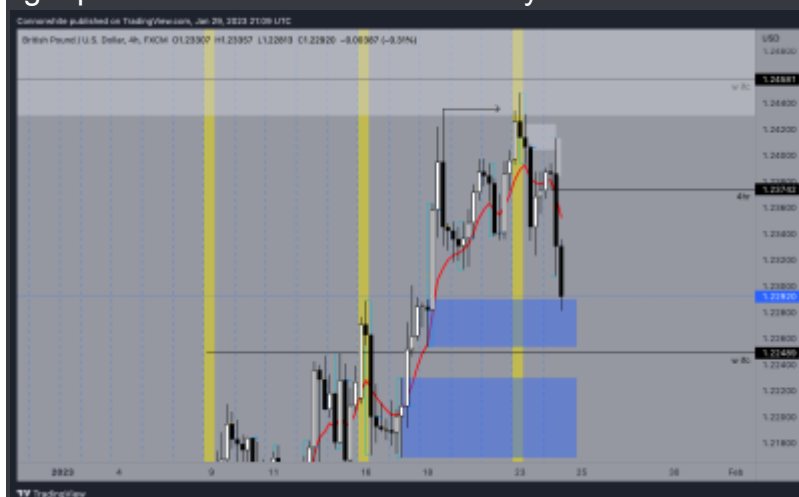

1hr and 4hr bullish but dont like the lows, looking to see if we get dsitro out of this 1hr ifc

so annoying i wanted this 5min area to break before selling it, sell was so clean if only it broke 5min first

right price is in 4hr demand and really i think well show some buys from here

5 and 15min is bearish, couldnt snag no sells down but for high risk sell, theres this 5min poi with eqls below

1min bos after we sweep some highs so can sell down to take lows out

tp hit

was also bearish engulfing candle on 2min

price is bearish on 4hr now, so will look to see if theres any distro inside the sell poi but may get some buys up

looking to see if we can get buys out of this 1hr poi to target up

15min bearish may see some dsitro to sell down lower

so little 1min bos after sweeping highs, bit risky still, but the first distro i couldnt get in as it accumulated and then was making eqhs

tp hit but wouldve got b/e

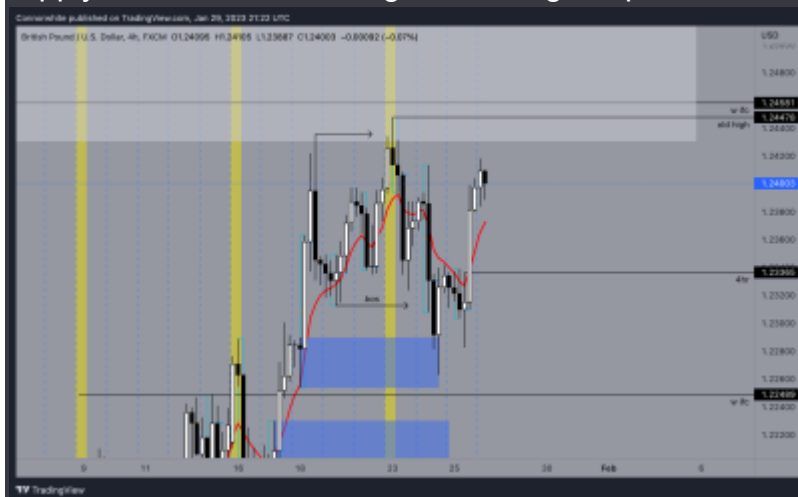

15min bos to upside looking for buys out of here to target all highs

areas were right couldnt snag an entry

4hr still bearish but i believe were heading higher now after invalidating supply, so will be interesting if we can get a pull down to go back up

looking for re accumulation here as asia low got swept

1min bos tp hit

couldnt snag nothing else this day too choppy

Friday -

looking for buys out of this 1hr poi to target eqhs

fuk friday price is choppy as hell
