

Gbp/Usd week starting Monday 30th of January –

Weekly is bullish, looking to see if we can pop down into weekly imbalance fills and take highs out and come into daily ifc above highs

Daily is bullish aswel

4hr is bearish so may see some more downside but got the 4hr ifc marked up as may react to go higher

On 1hr theres more eqhs so want these taken before selling

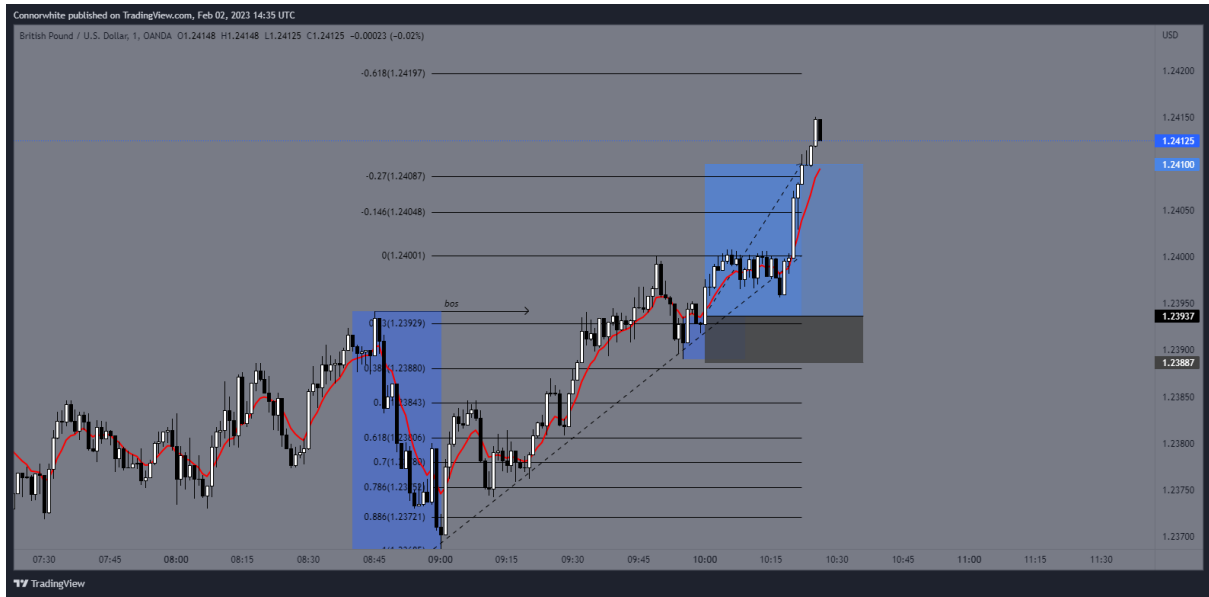

5min re accumulated so want to see re accumulation out of the push down to take highs out

1min bos, not the cleasnest but could take it if you wanted to try take highs out

Tp hit

Tuesday 31st January –

1hr is bearish, looking for dsitro here to go abit lower and fill some imbalance and tbh even take lows out now then maybe go for highs

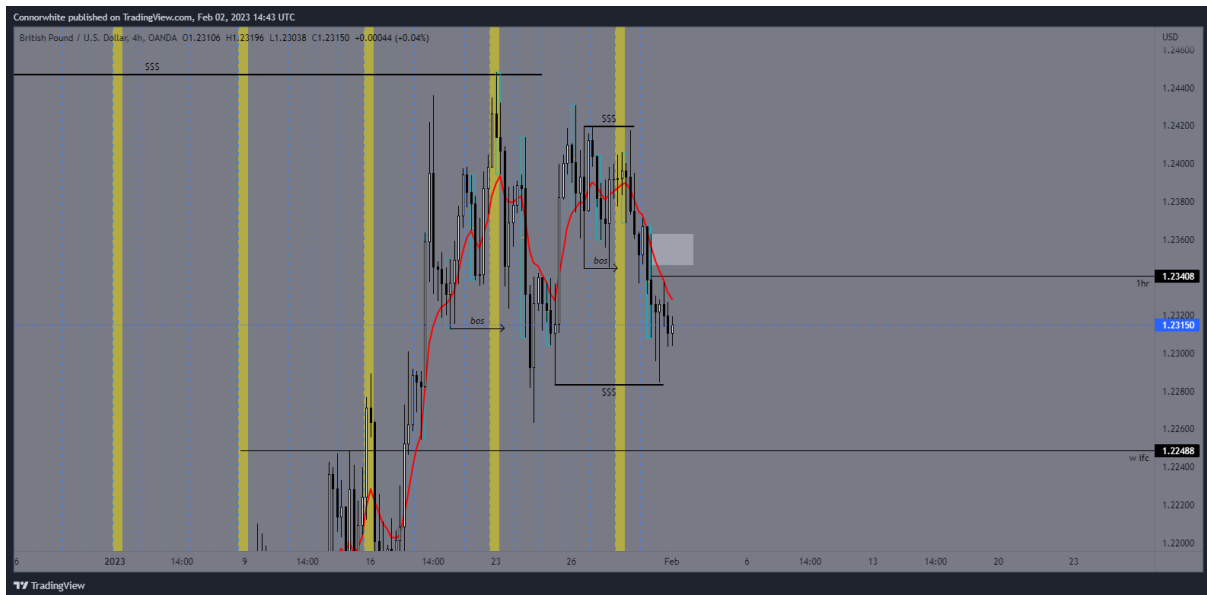

Price moved fucking jank no confirmations in the areas or nothing

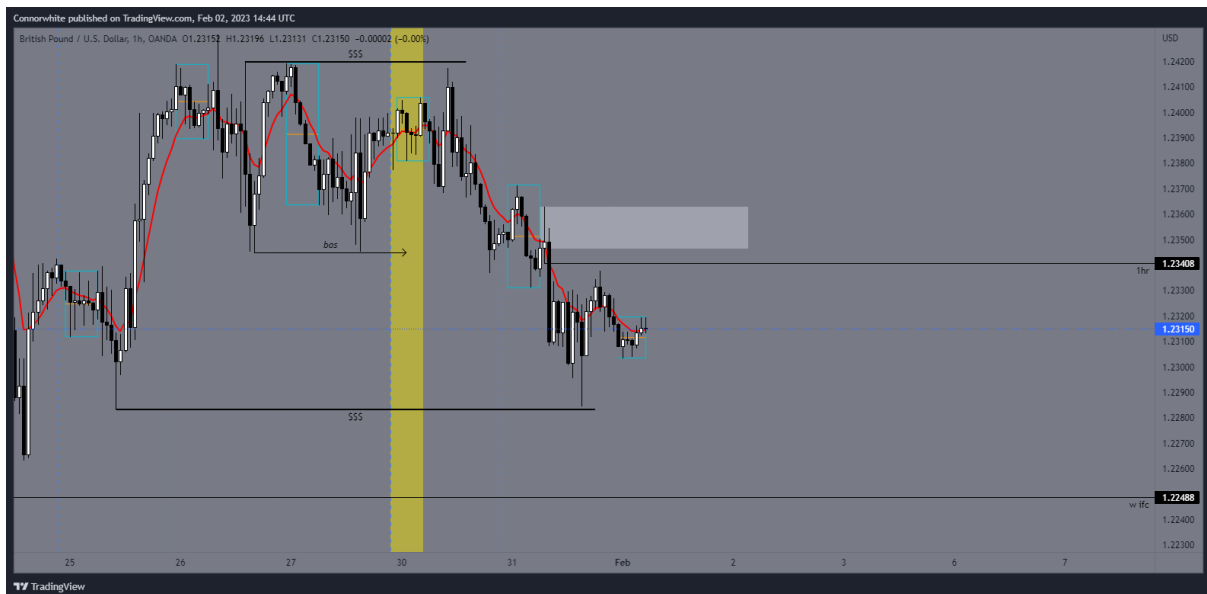

Wednesday 1st February –

4hr got eqls that I want taking

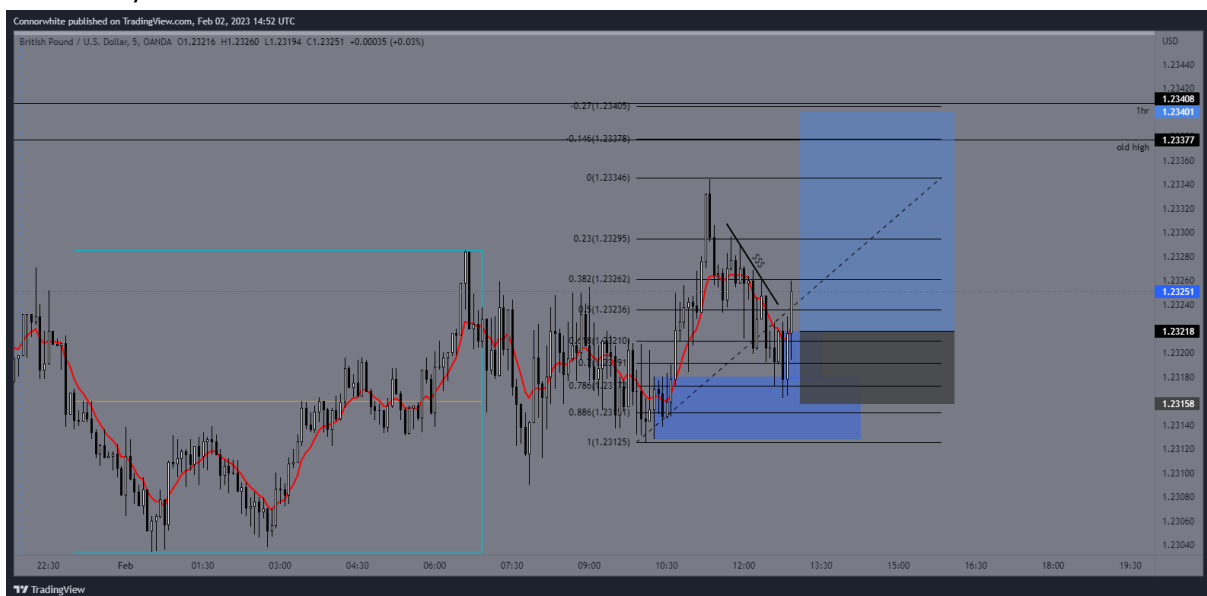

1hr is bearish too, there is the imbalance fill we can go up too to sell off but well see

1min bos buying from here

On this broker 5min didn't engulf but on fxcm we did, so buying here to take highs out and target 400 level by the 1hr ifc

Tp smacked 3%

Thursday –

So price is bearish on 4hr, we swept some eqls and rallied up, I do ideally want the liquidity taken to the upside before falling, so may see buys out of the 4hr poi

5min bos inside area want to see some re accumulation as news might push it up

Price tapped supply and just sold off no re accumulation

Nothing clean for rest of the day

Friday –

So price has still got the eqhs, would like a tap up into the daily ifc to either go lower or find re accumulation to get it higher

But because of nfp nothing was clean at all

Week starting Monday the 6th of February 2023

GU week starting monday the 6th of feb, weekly and daily are bullish, weve come into the weekly ifc so i am looking for signs of accumulation to get price higher into the other weekly ifc or tbh even take highs out

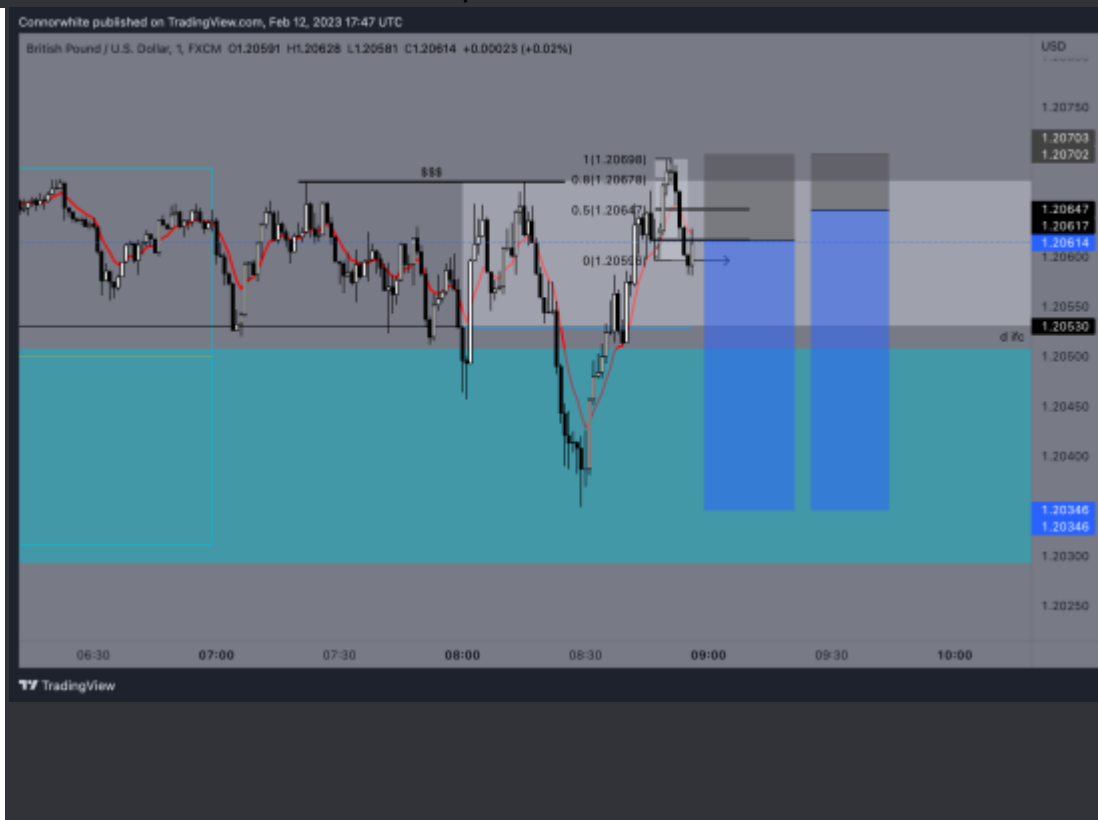

daily come into the daily poi, got targets to upside

5min is bearish in london, we got this area to look for distro but we have got eqhs above it so would like to see them swept then move lower

1min bois after sweeping highs, can sell at start of the push but stop is abit bigger or can do 50% in the imbalance where makes stop abit smaller and r:r better

tp hit, but if had start of the puysh 3% hit if 50% the first drop done 3% so may of took partials and gone to b/e

Tuesday –

tuesday - 1hr bearish, looking for distro out of the ifc that swept liquidity also

looking inside of herre now we closed below een more so

couldnt get filled from this bos

Wednesday –

wednesday - 1hr bullish, looking at these 2 pois for potential buys, so may see some sells down as yesterdays high got taken out and plus weekly open gap by first poi

5min broken down multiple times above the highs, not clean delivery though for any entry, but looking for distro out of this poi

1min bos inside area, looking at entry at 50% by 800 level

to smashed

Thursday –

thursday - price is bullish on 1hr still, held well off first 1hr poi, looking to tske wednesday high out

in an ideal scenario would like price to come down into this 30 min area to take the highs out

1hr is bulliush still, price is high up looking to see if we can come down into 1hr poi so will look for sells down

5min bos looking for re dsitro out of here

1min bos looking for sells out of 500 level to take some lows out and target imbalance and target fib extension

sl hit

Friday –

friday - price is bullish on 1hr still, we come off higher tf supply tho so it may want to go lower now, couldnt get any nice delivery for it, but in the 1hr range got the 4hr ifc and imbalance marked up as you can see

in this leg on 1hr

looking for re accumulation out of here

TradingView

price went bearish as nothing for the sells down and didnt fgive confirmation on buy up, looking for dsitro out of here

looking at 15min ifc

lovely reaction and sell off out of area from news now need more dsitro out of here

1min bos wanted price at 50% and ny open level

didn't get filled

Week starting Monday the 13th of February 2023 –

Monday the 13th of Feb gbp/usd, weekly bullish still, got refined areas in the weekly ifc to buy from potentially, but also got imbalance above like a weekly ifc and daily we could tap in to to go lower

on the daily

so 4hr has broken to upside so am looking for retracement up to move lower

looking at this poi up the top

1hr is breaking above in london so would like a pop down and re accumulation

5min broke to downside, can only see the extreme being the buy zone, but if price comes up first might be able to catch sell down, bit counter trend and risky but can work

1min bos looking to sell here

missed my entry before taking low so trade invalid now

so price took out the low, we've re-accumulated on 5min, i am wondering what this poi will do for a sell, but after the accumulation i will see if there's re-accumulation out of here too

shit 1min bos, bit risky but can work as was probably nice bos on seconds

tp smacked

price is now rallying, can see the signs of strength, looking for re accumulation maybe out of ifc

1min bos buying here

no way missed my entry by a fucking pip

Tuesday –

tuesday 14th of feb - price is bullish on 1hr, were in 4hr poi so i am looking for re
dsitro so well see if that happens or not

so 4hr has broken, this is the only pair to actually break above like this so
wondering if we are going to shift bullish but its very wicky atm,

we taped the weekly and daily ifc too

would like to see it retrace more really but we have filled a 1hr and 4hr imbalance but i was looking at the extreme down the bottom or the 1hr poi in the middle of the range the rally base rally

15min 100% bearish so may see re dsiro out of here

1min bos can enter near off ifc, but dont like the imbalance above where were actually entering and not the best 1min bos so this is 100% higher risk

price slammed down to 7% so wouldve been b/e and taken major profits

Wednesday –

wednesday 15th of feb - price is moving lower, ideally want a pop up to sell back down

price is just moving lower, dont like the eqhd but if its going to keep going lower then can look for dsitro out of here

1min bos looking to enter here to target fib extension also a 1hr ifc down the bottom

tp samcked

tp hit wouldve cashed as hit 3% anyways

Thursday –

thursday 16th of feb - price is bearish on 4hr, looking for distro out of this area were in or 1 of the imbalances above

price is still bullish on the 5 and 15min and if it re accumulates it might want to make another high so can look for re accumulation here

3min engulfing and 1min bos buying here to take highs out

b/e but we did do 3%

price is now breaking down so can look for dsitro out of here nown weve had some demand invalidated

1min bos selling here to target fib level

tp smacked

price just sold off, wouldve got b/e if i didnt hold because of news but nothing clean to snbag for rest of the day

Friday –

friday 17th of feb - price is bearsih we swept rhe main leg low, come into demand, would like to see if we can get some buys up to target pois

15min is bearish, if were going to keep going lower for abit looking for distro out of here

so price kept breaking down on 1min, dont like the eqhs thought thy was going to get taken but we keep showing distro so can try and entry here to take the lows out

price done 4% then reversed so wouldve took some partials anyways but very close to stop from the wick up

price is bullish on 15min we rocketed up couldnt snag a buy tho, but now looking for re accumulation out of one of these spots but cant see it being a deep retracement based on how bullish its gone

tp spanked

Week starting 20th of February 2023 –

Daily is in a weird range on gu, were coming into an old seriopus demand, got loads of eqhs above but we got a daily ifc which you can see which id like a pop up to to sell off

4hr bearish but high chance that high will get swept

15min bullish so may get re accumulation out of here, be interesting if it comes to weekly open and what it does there

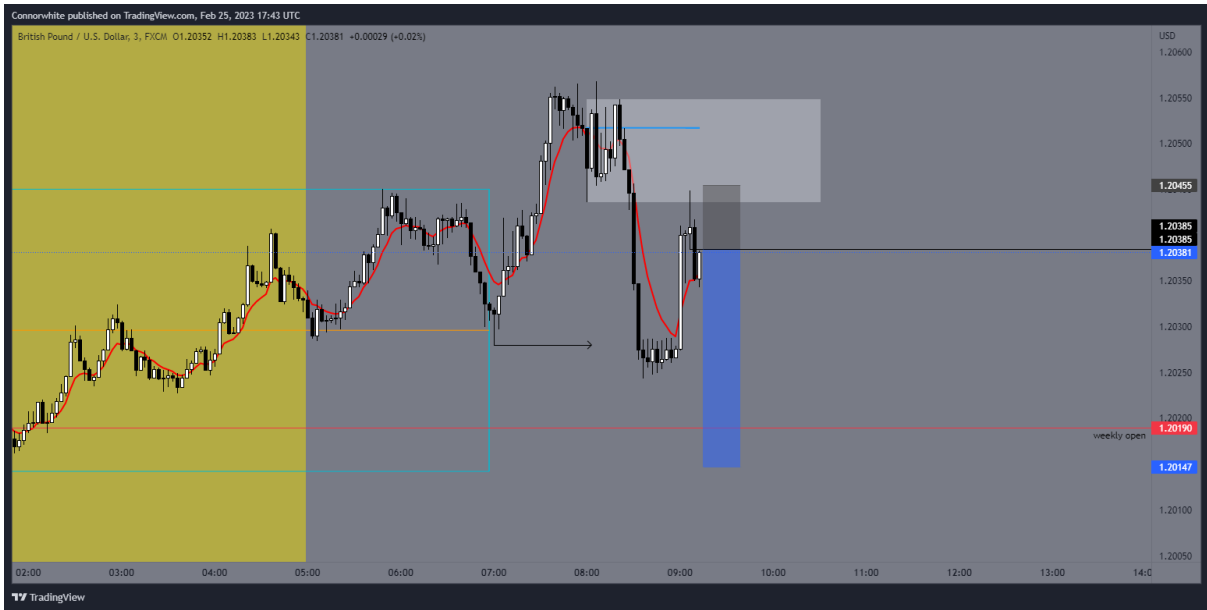

After the 5min bos and 15min could get re dsitro from here

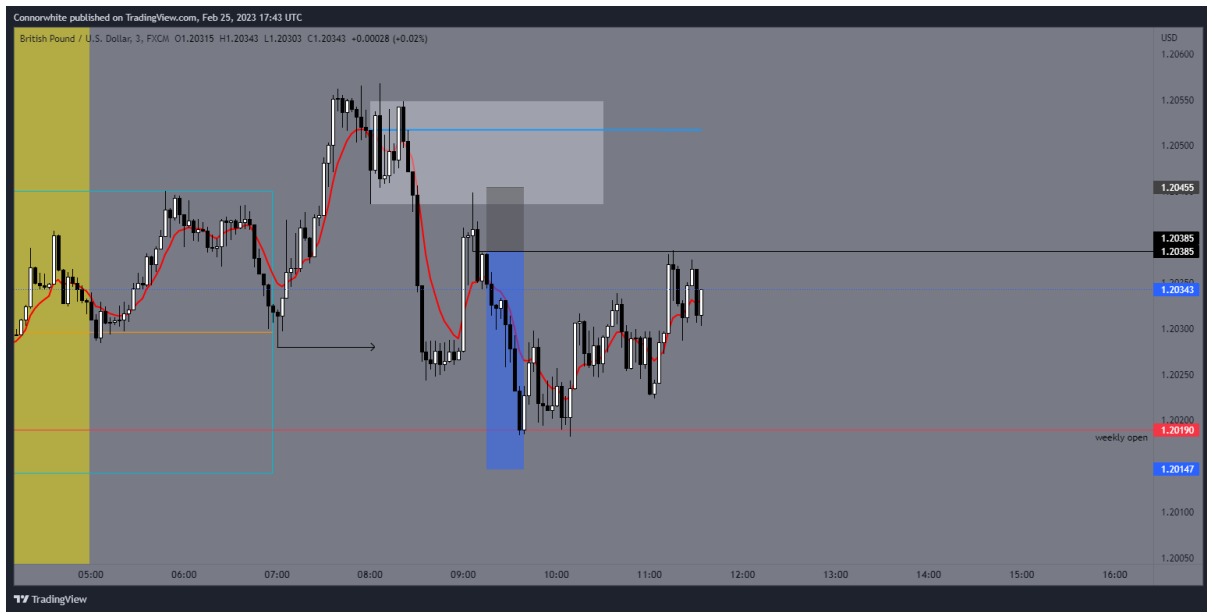

1min bos not rhe cleanest but can sell here to target asia low

Also 3min engulfing

b/e

Tuesday –

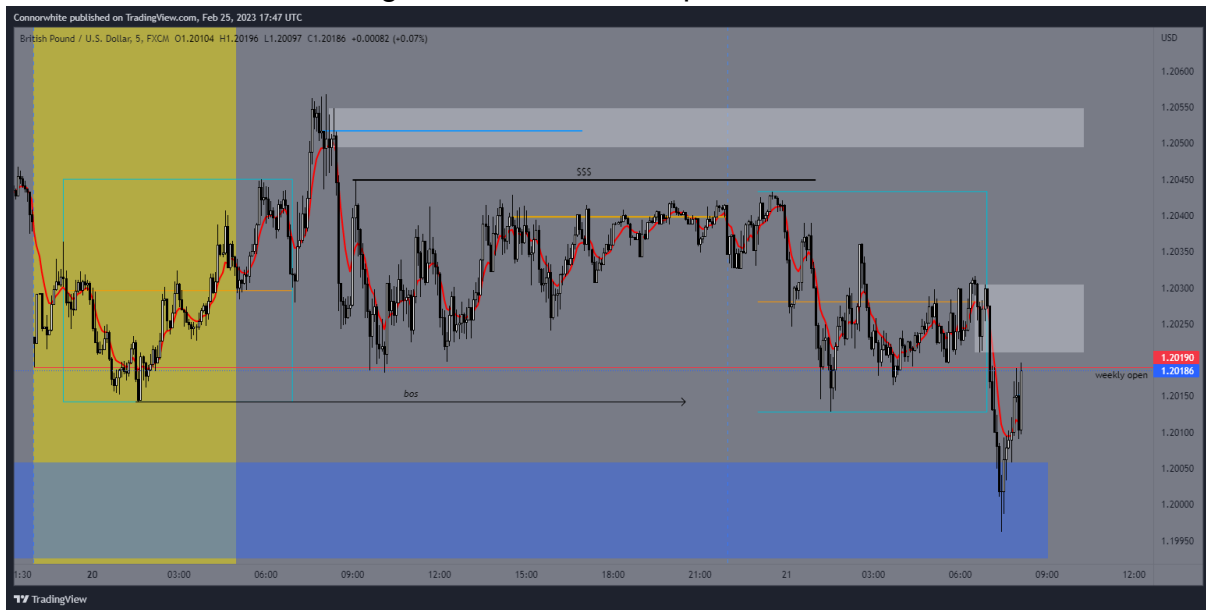

Price started selling off out of 4hr area from Monday

Come into a poi below the lows so wondering if we can take highs out yet

15min bos to downside so got these 2 areas for potential distro

On the 15mimn

1min bos can sell here

Tp smashed 3.4%

So price re accumulated on 4hr, will see if we get distro from the daily areas or if we accumulate with the 4hr

So price did break on 15min, couldn't snag anything on a sell

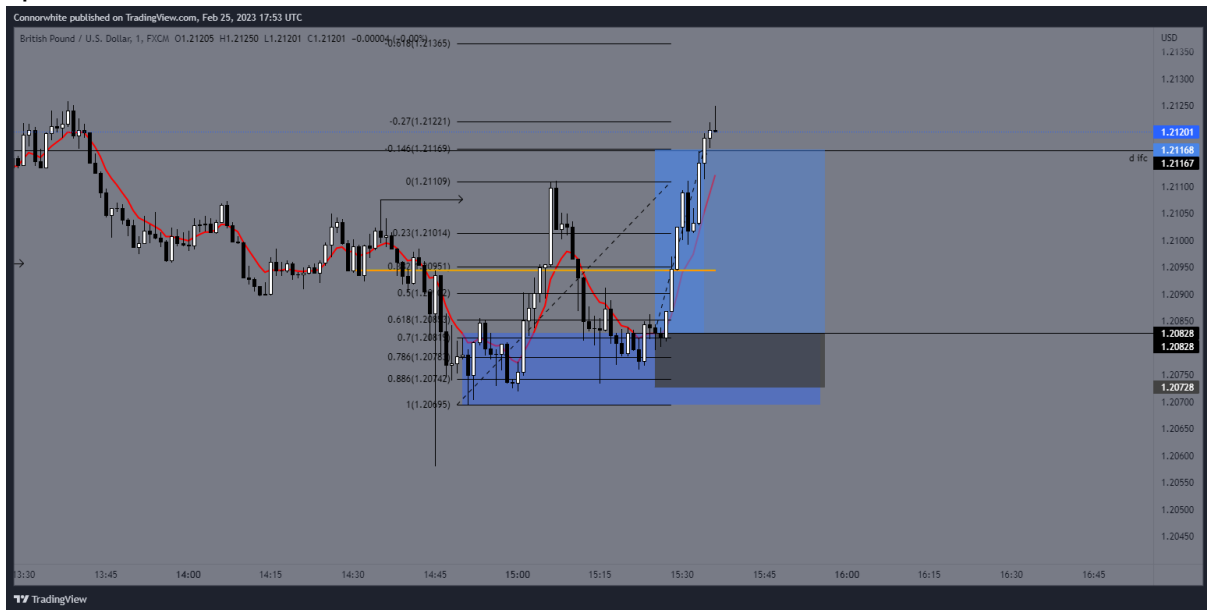

But weve just broke on the 5min to upside so it may re accumulate out of here

1min bos not the cleanest but can buy from, here to target huigh and fib extension

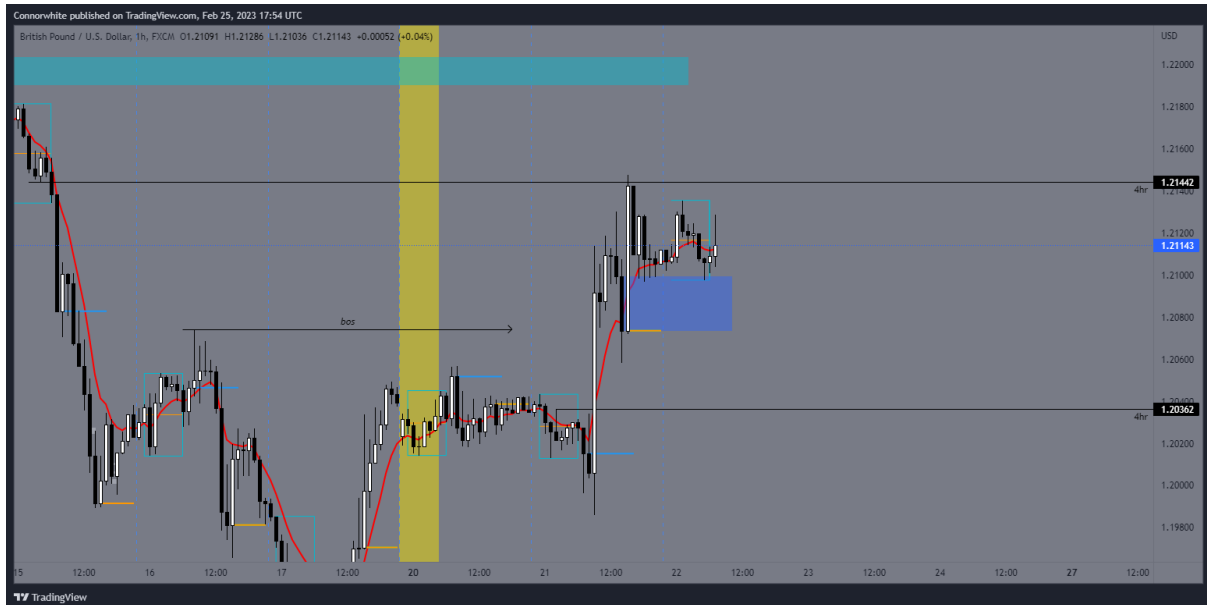

Tp smashed

Wednesday –

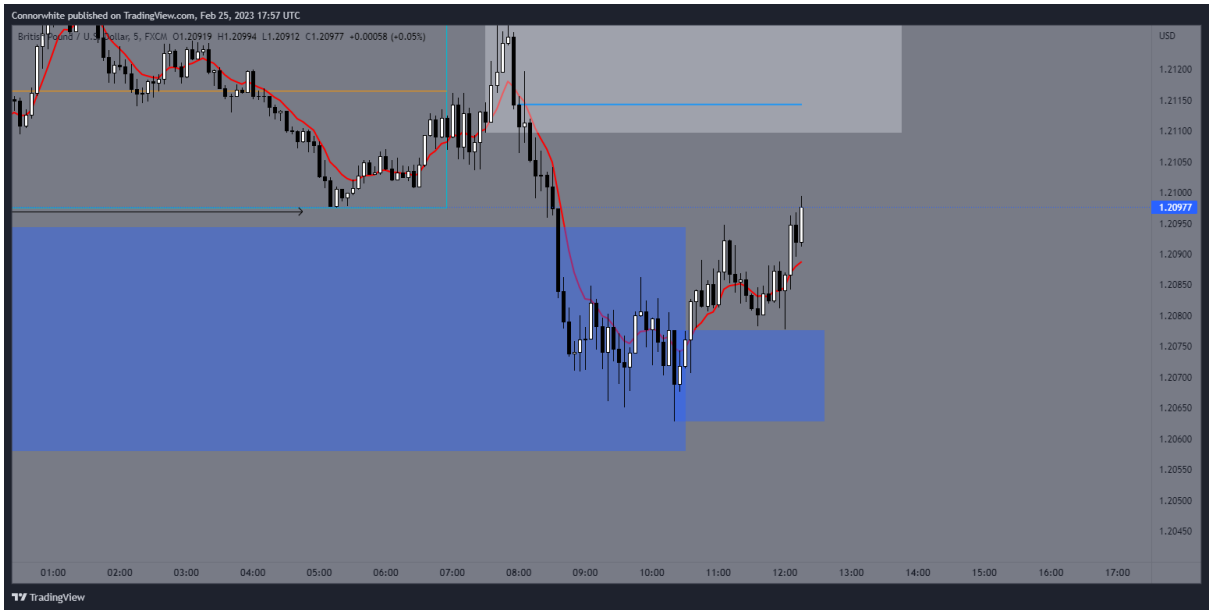

So price is still in 1hr poi in the 1hr range, but don't know if this is going to hold today

So 15min is same leg asd 1hr, but we got this poi from the morning of the sell leg we could show distro out of

Did want re accumulation from here but couldn't get uit

1min bos entry at 50% by imbalance fill first target do demand for 3%

Done 2% then come back b/e

Thursday –

Price is bearish on 1hr, weve got 2 areas to sell from but we just tapped demand for 4hr, but we need to show some structure breaks before eyeing buys

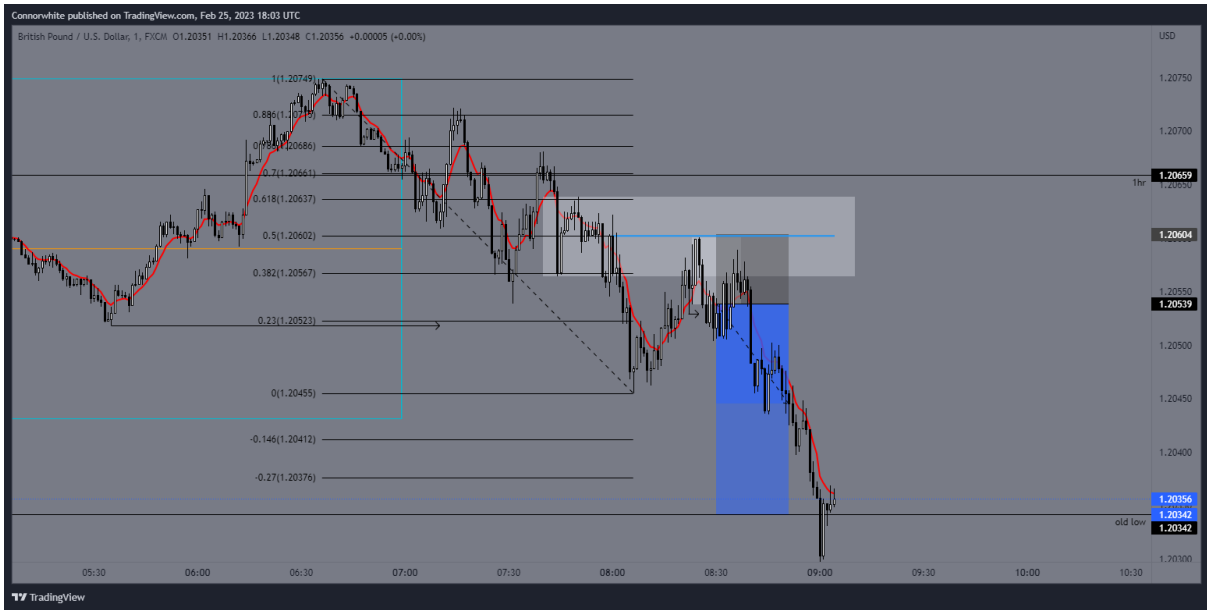

5 and 15min bos looking for distro out of here

1min bos selling here to new low

Tp hit

Looking for dsitro out of this 1hr poi

There's been a 5min bos but not sure how I feel about it because we're still in this bullish countertrend that's been formed

Friday –

1hr bearish looking for distro out of here

Price chopped and gave nothing
