

## Week starting Monday the 30<sup>th</sup> of January –

Weekly is bullish, we have eqhs above and daily ifcs, got a weekly ifc down the bottom and a daily to then expand higher, not sure if we'll get down that low to expand higher

Daily is in this range so would like this range to maintain and then take highs out

5min bos in area looking for buys here

b/e or stop depending on if you moved, I would've moved as we took that high out basically and made eqhs

## Tuesday 31<sup>st</sup> of January –

1hr is bearish now, lows have been taken but I believe we want to come a little lower so looking for sells out of either poi

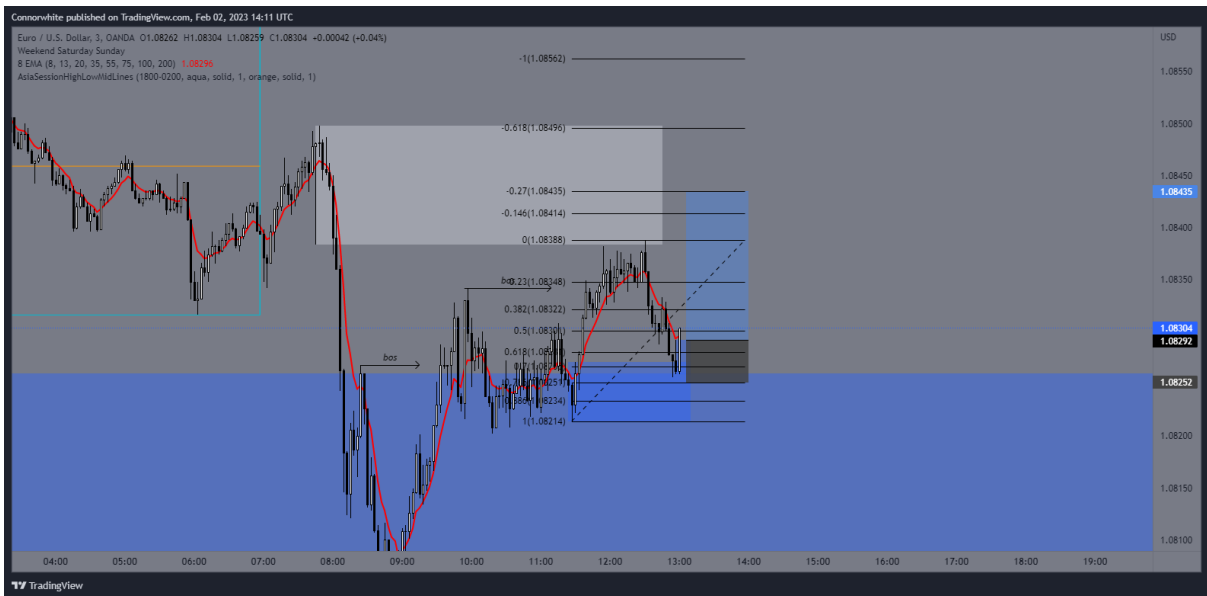

So 15min is bearish were inside the poi now, but 5min has re accumulated, we sold off massively so it can carry on selling but probably makes sense after sweeping a 4hr low too that well start pushing higher now, need to see if we show a nice 5min break out of here to sell, or if we come to 5min higher low and accumulate we can buy

1min bos inside 5min demand, can buy here and target highs and fib extension for 3.5%

Also a 3min engulfing candle

Tps smashed

## Wednesday 1<sup>st</sup> February –

4hr is bearish, we did re accumulate yesterday so got the 1hr poi for potential sells if it shows dsitro or we could've retraced enough into the daily to now target highs

Still this 1hr poi

As 1hr bullish going into London might see re accumulation inside the imbalance

5min bullish, looking to see if we get re accumulation out of this, as we would need this 5min to break then show re dsitro to even consider any sells

5min bos inside poi and engulfing, looking to buy here to target whole level and by fib extension

Tp smashed

## Thursday –

Daily is bullish, we have made a new high, ideally looking to see if we can get some sells down to daily ifc to then see if we expand higher or not

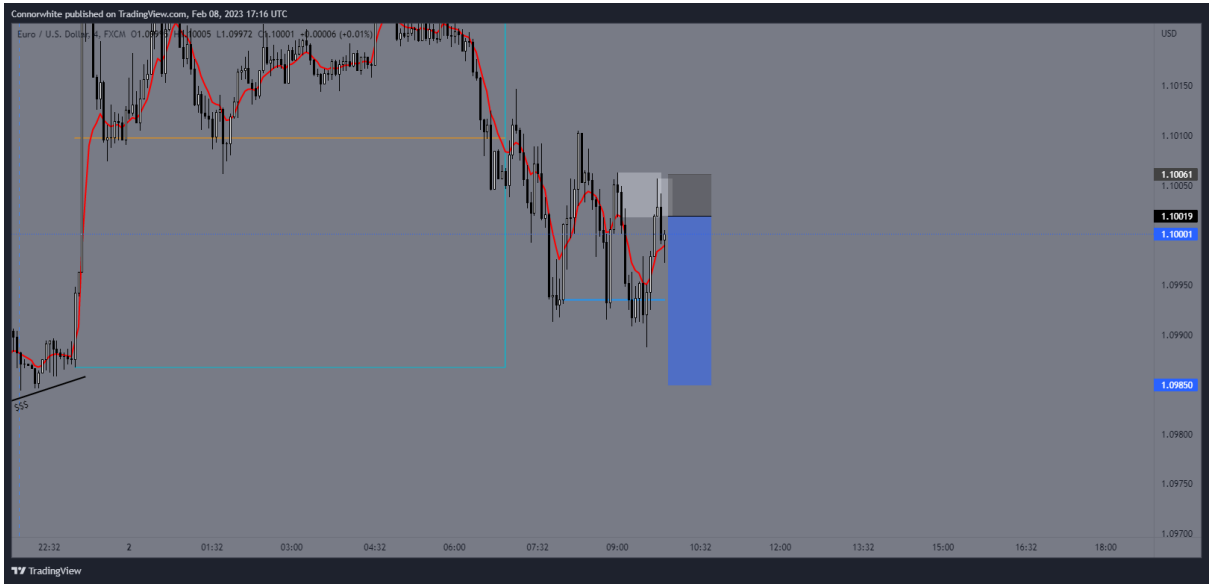

5min is bearish, looking to see if we do get distro out of here to sell down

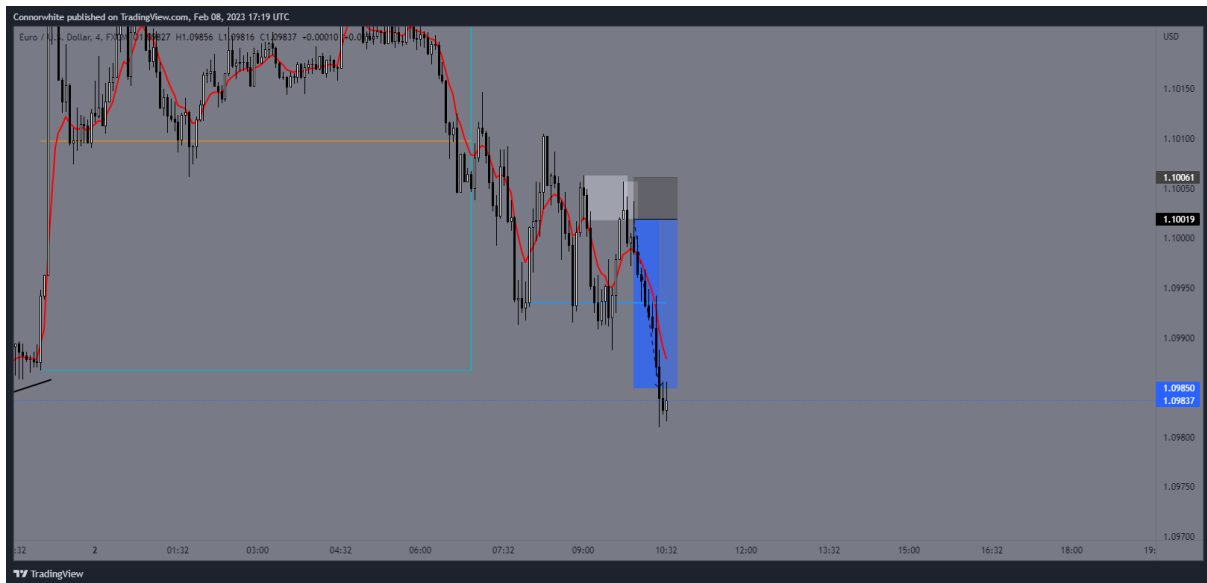

1min bos looking for sells out of here

Also a 4min bearish engulfing candle

Tp hit

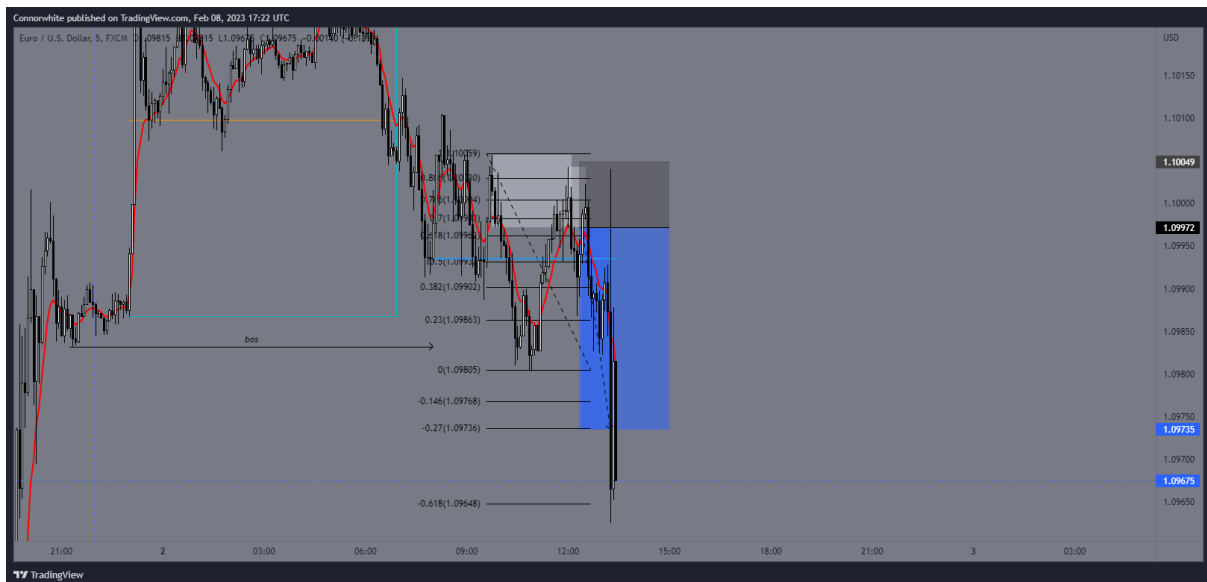

15min bearish looking to see if theres any sells out of here

5min engulfing candle sell down to fib extensionuion

May of got b/e because of news, if didn't move to b/e then would've hit tp

## Friday –

Didn't get nothing as was nfp and nothing clean, this was the end of the day

]

## Week starting Monday the 6<sup>th</sup> of February 2023

EU week start monday the 6th of feb, we have downside targets such as monthly, weekly and daily ifc, which is where the big imbalance is, this is where im expecting price to go down too, daily is bearish now so will probably head abit lower before retracing higher

on 4hr looking at these 2 pois up the top as targets eventually

couldnt snag nothing, has areas marked up correctly but couldnt get a distro out of it

but 1hr poi we had 1hr bearish engulfing candle

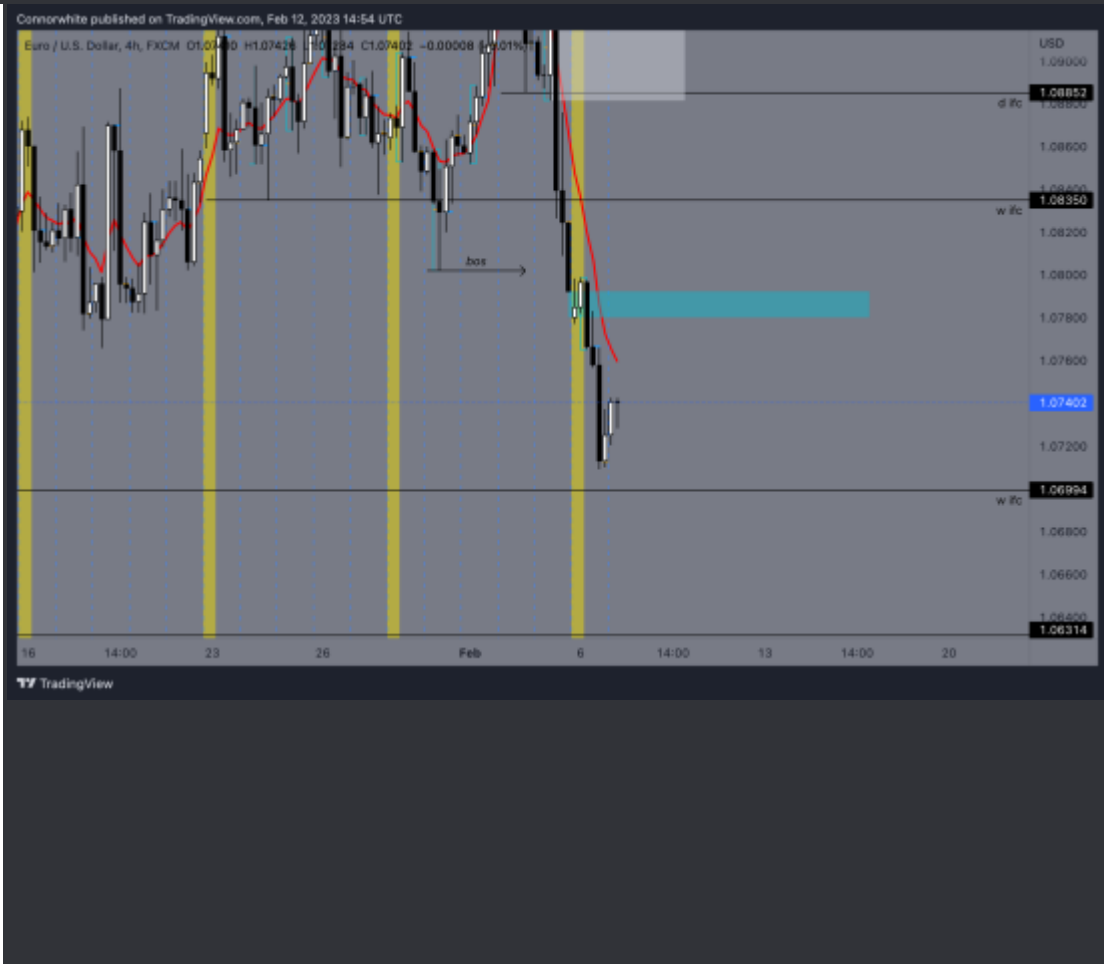

keep note

Tuesday –

tuesday - we was still bearish coming into higher tf sareas, am waiting for signs of accumulation but will keep selling down from lower high distros

15min bearish looking for more distro out of here

5min bos inside of area, looking for more dsitro at 50% or 80% of push, 80% would be lovely as lines up with ifc

1min bos at 50%, looking at 50% of 1min bos but looking to enter off ifc, cant imagine it coming to 80% as no imbalance or anthing, can target london low which is 15 min range low too, or target whole number which is by fib extension

tp smashed

5min range is bearish, london low and 15min range low still in tact, looking for dsitro out of here

1min bos inside poi, looking at 50% and 80%, both are imbalance fills, both small stops, depend how anal you want to be with your entry and stop for this one to target fib extension. personally took the 50% one to actually get in the trade as youll see 80% entry didnt get tagged which is why i always say about the 1min bos and taking it off extreme ifc in 80% isnt always practical as dont get filled alot

tp hit

15min range got a new range, got these 2 spots one being extreme up the top and one being the area that broke the low, so looking for distro out of one of these spots

its such a shame we only come to the start of the push as the price action ill show you  
was perfect for an entry but wanted higher

50% imbalance fill perfect

there was also re dsitro too

the 2 previous trades though see how it printed as a 15min engulfing candle

## Wednesday –

wednesday - price is bullish on 1hr, ideally looking for high to be taken tbh then either try sell down to then buy up

5min bullish, like the area down the bottom where liquidity was swept, also got imbalance too and dont like the area by asia lows as got eqls all there

5min bos looking for re dsitro out of 1 of these spots

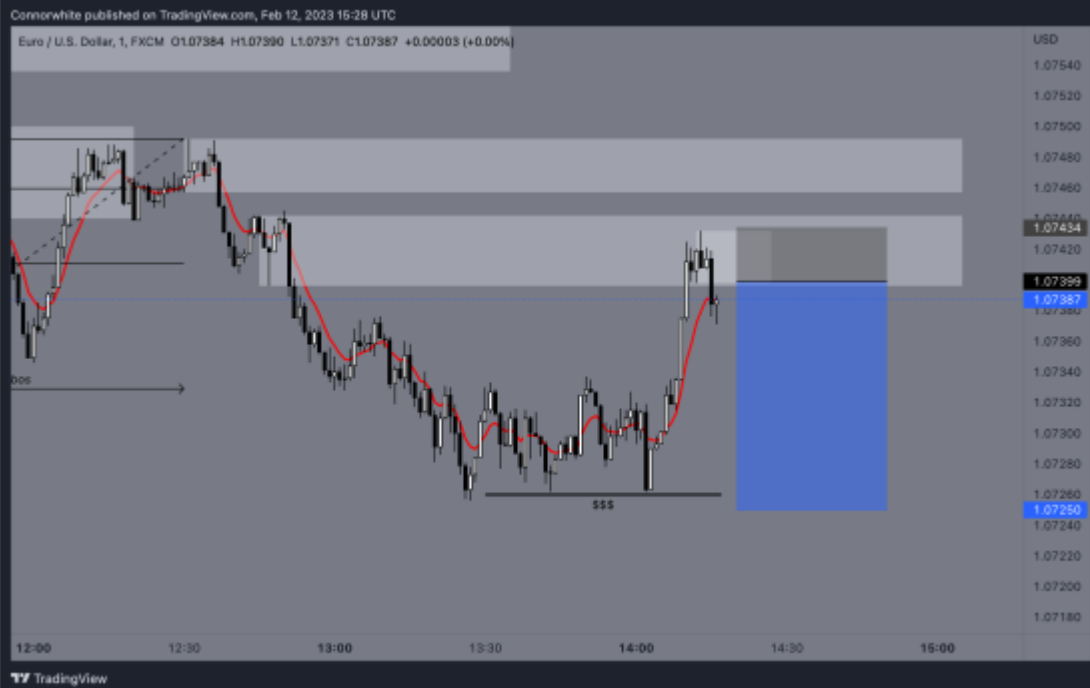

b/e or stopped out

new 5min range looking for distro out of 1 of these imbalance fills as line up with 50% and 80%

1min bos tp at the lows

tp smacked

new 5min range looking for distro out of here

1min bos entering at ny open target new low and 200 level

tp smacked

so new 5min range you can look for distro out of here but more risky now

because of trendline liquidity

also lows are fully taken out

might of snagged this but b/e

## Thursday –

thursday - 1hr still bullish, come close to the imbalance and ifc but didnt quite tap it but its fine still looking for tuesday high to be taken

15min broke, come to 50% would rather us see come deeper into poi and imbalance tho

tuesday high swept, wanted to see price retrace properly into this area,  
5min is bullish, didnt like this though because of the eqls but will show the buy  
it gave

1min bos entry at 50% just didnt like the fact nothing lines up with it either  
aswel as the eqls

tp hit tho

**Friday –**

friday - price i still bullish, we did come out of the weekly open gap esterday but i personally didnt like the delivery of it but incase we do want to go lower as there is some eqls i have got the imbalance it left on the hourly open as a target for potential buys

15min is bullish but dont like the eqls but well see if theres anywhere for buys unless keeps going up and get some nice sells

looking in here for buys on 5min

price sold off shit price action

## Week starting Monday the 13<sup>th</sup> of February –

week starting monday 13th of feb on eu, price is in the weekly candle, we have alot of imbalance to the upside to also fill

price is bearish on the daily, we got an engulfing candle on friday so ideally this week i want to see if price can tap the candle that got engulfed and continue to the downside atm as got a daily ifc and daily sc to target

1. [14:42]

4hr is bearish, looking to see if we can come to the 4hr poi up the top which swept liquidity and also has imbalance in to move lower

1min bos entry at start of push or entry at 800 level which is just above 50% of the push down, first tp would have to be fib extension if take it off start of push but if at 800 level can have it as new high

tp hit from start of push, 800 level entry didnt fill

## Tuesday –

tuesday 14th of feb - looking like price is approaching the 4hr poi, want us to come up there and show distro, if price does come lower tho first then i will look at the 1hr poi below for potential buys but well see

5min bos inside poi want to see price give a re distro and can sell

1min bos entry below 50% at ifc, target new low as first target

if want to hold would tsrget these lows

## Wednesday –

wednesday 15th of feb - price is bearish on 1hr want to see distro out of this poi

no re dsitro

nothing clean for me wednesday

Thursday –

thursday 16th of feb - looking for dsitro out of this poi were in to target the lows

once 5 and 15min bos looking for distro out of either of these pois

so 5min carried on breakign down, thought we was going to sweep eqhs then come into poi but we didnt we left them, with news we also swept just other highs rather than the other ones and sold off, so can look for distro out of these 2 pois that are in that 5min range

1min bos inside poi, looking at entry at ifc as just below 50%, can target new range low or target the further low lower down

## Friday –

friday 17th of feb - price is bearish on 1hr and 4hr, got some areas above we can get up o and short off from but would like to try and hunt some buys up

couldnt snag anything

## Week starting Monday 20<sup>th</sup> of February 2023 –

Daily still bearish and got targets for the downside for us to sel down too

4hr bearish, looking to see if theres re distro inside the poi

1hr is bullish and we do have lower areas to potentially accumulate out of but not sure if we will

15min bullish same as 1hr, don't like the trend line liquidity or the eqls at asia low, there is this poi we can come down to and buy from after a liquidity sweep

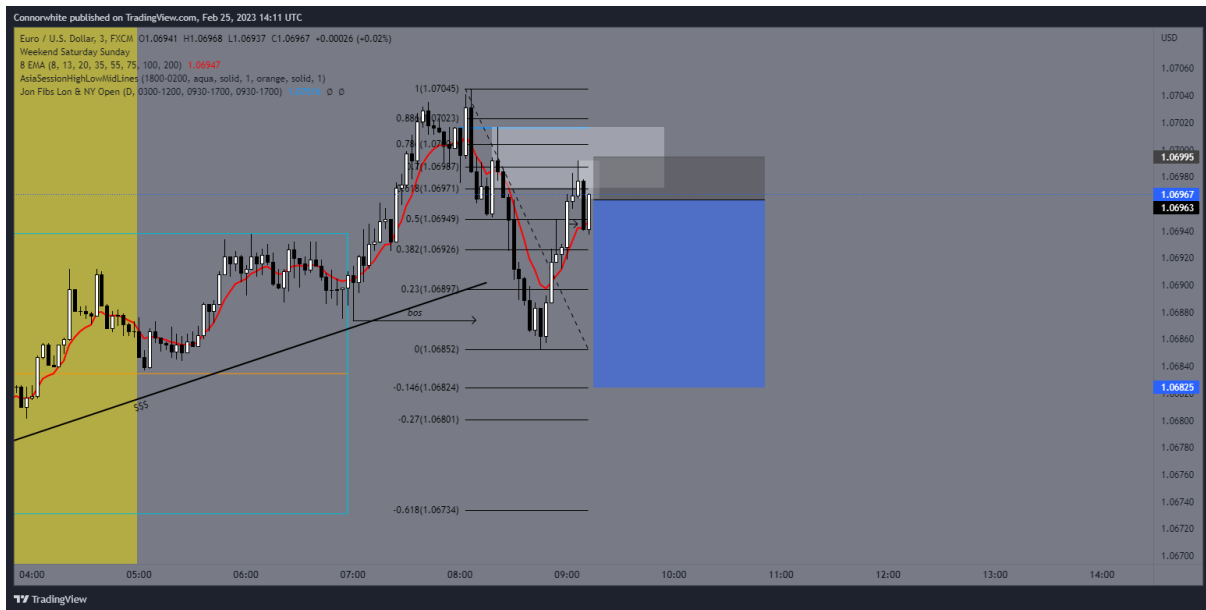

5min bos looking for re dsitro inside of here

1min bos inside of area

Also 3min engulfing, selling here tartget new 5min low and fib extension

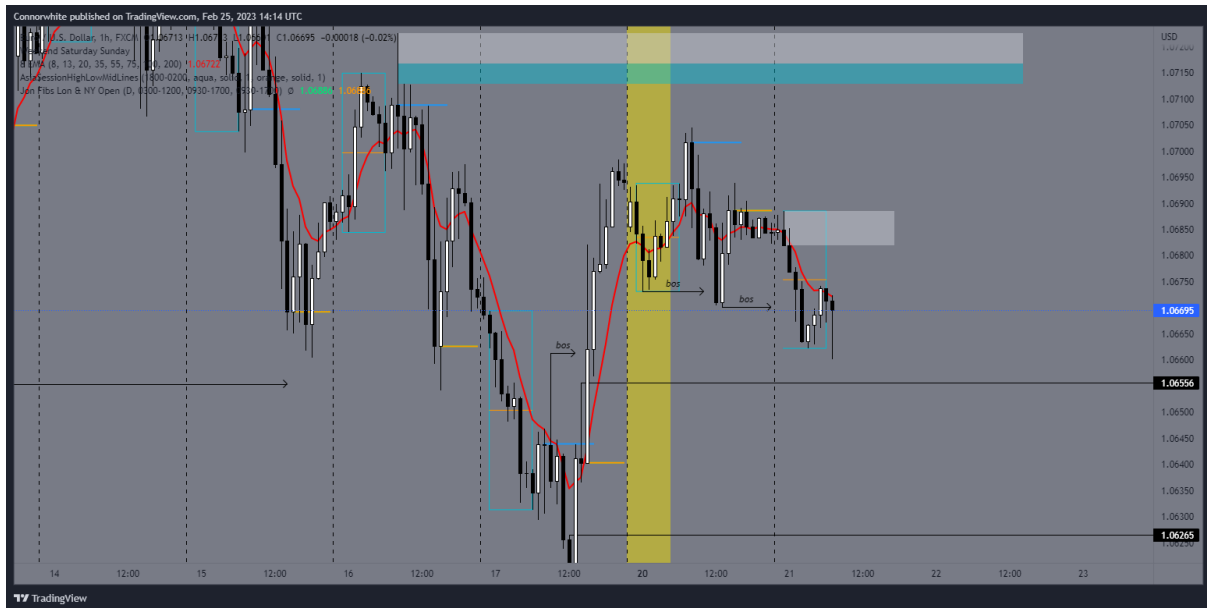

Tp smacked 4%

## Tuesday –

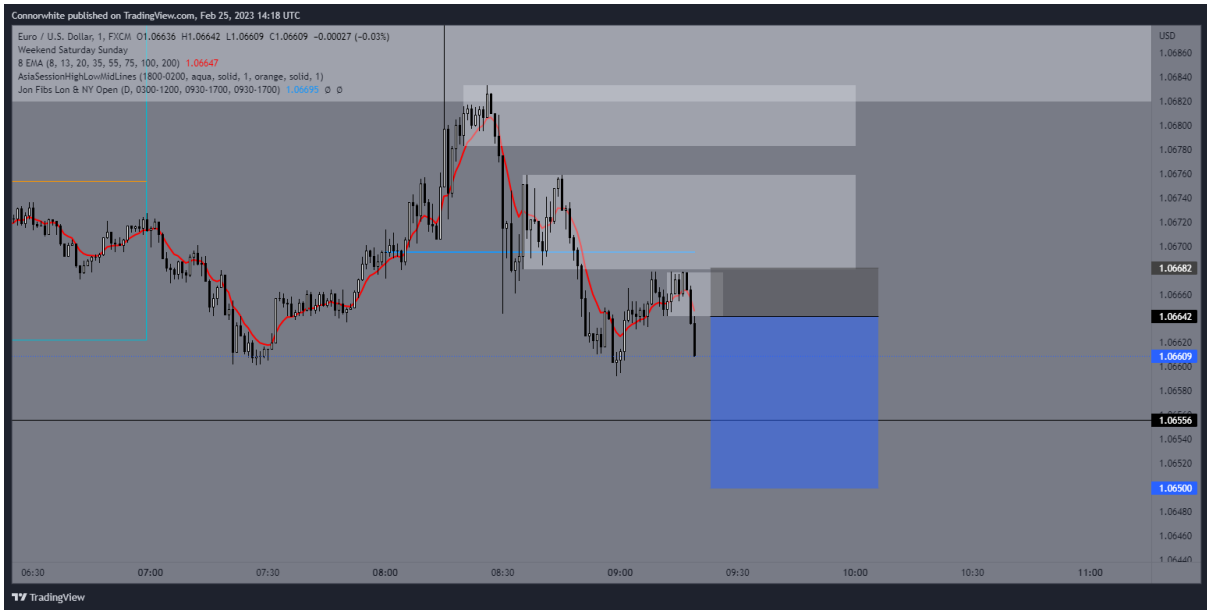

1hr is now bearish and moving lower, looking for re dsitro out of here

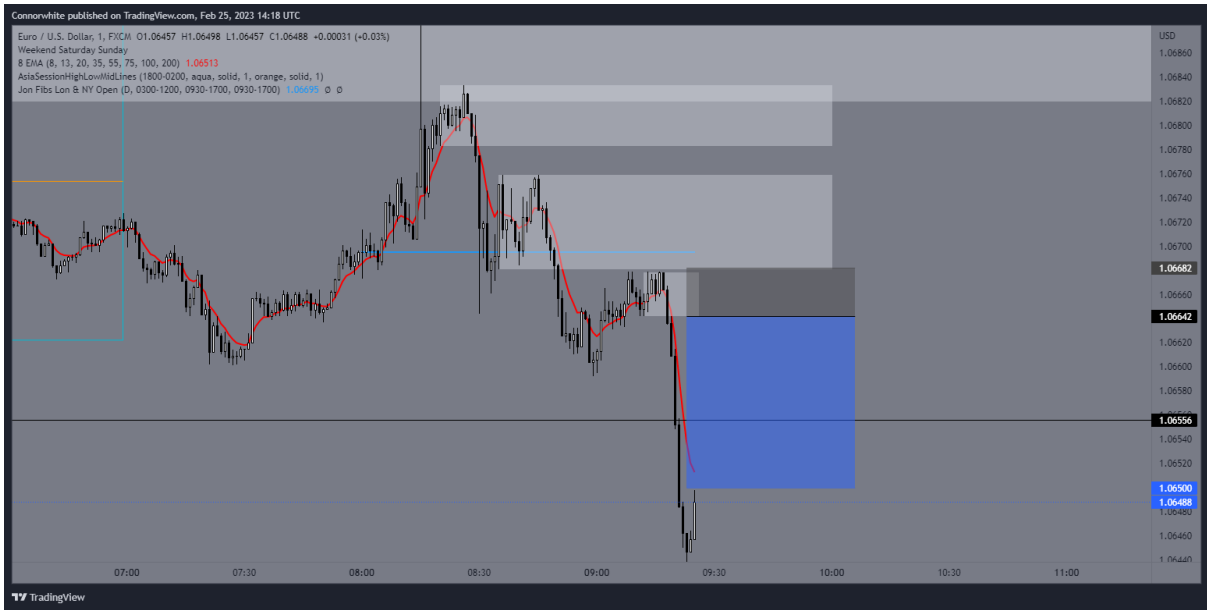

Price sold off and broke on 5min, looking for dsitro out of 1 of these pois

1min bos selling here to 500 level

Tp smacked 3.5%

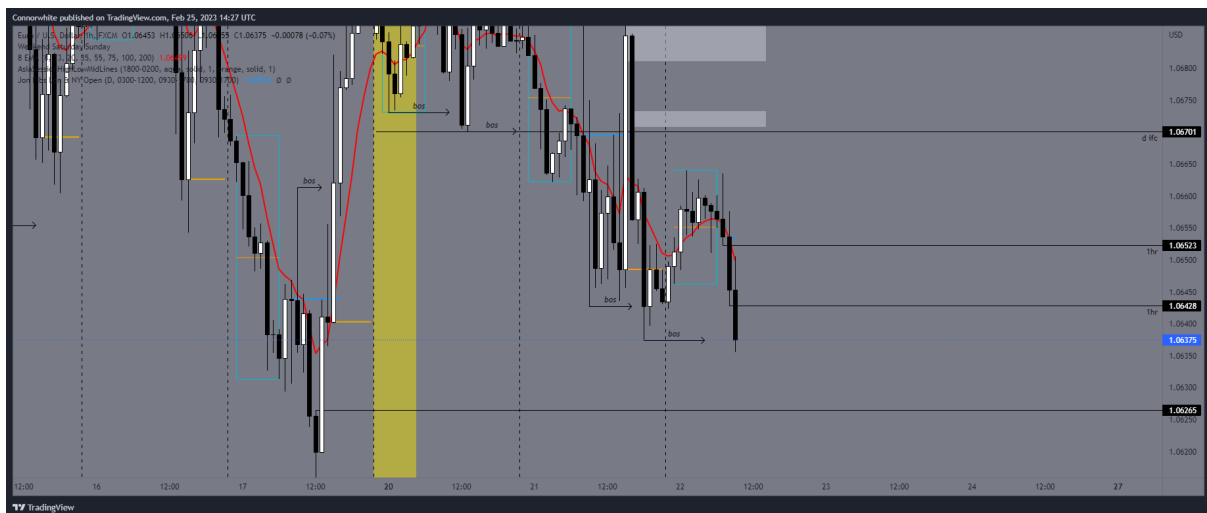

## Wednesday –

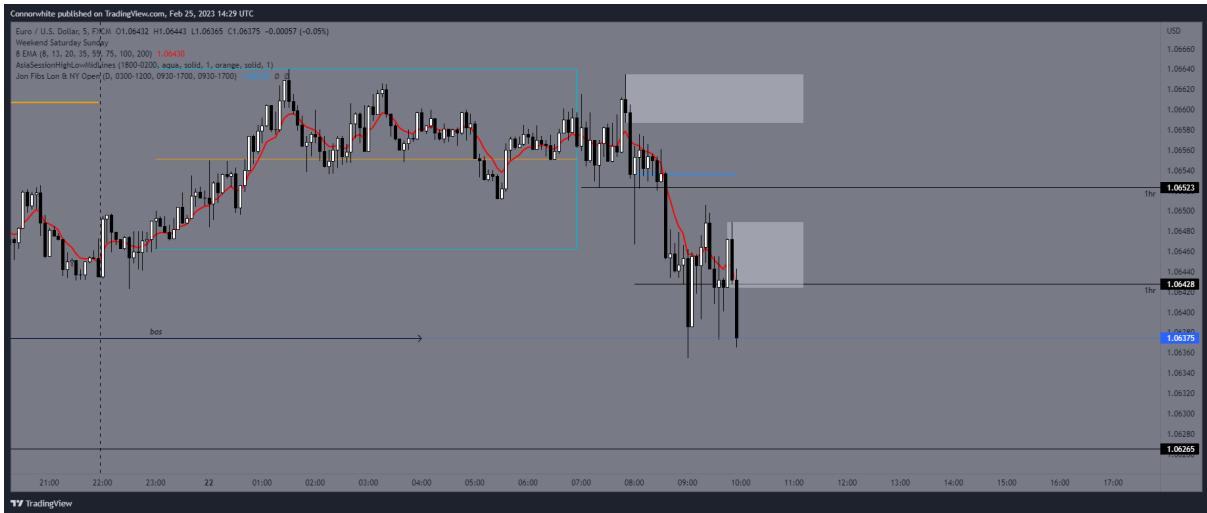

Price showed more bearishness after sweeping highs yesterday and sold off, looking for pop up to show distro to go lower

Price just sold off created new 1hr range, ideally looking for pop up to either 1hr imbalance fills to go lower

5min still bearish so can just respect 5min range

1min bos can sell here

Done 2% then come b/e weren't the clanest anyways

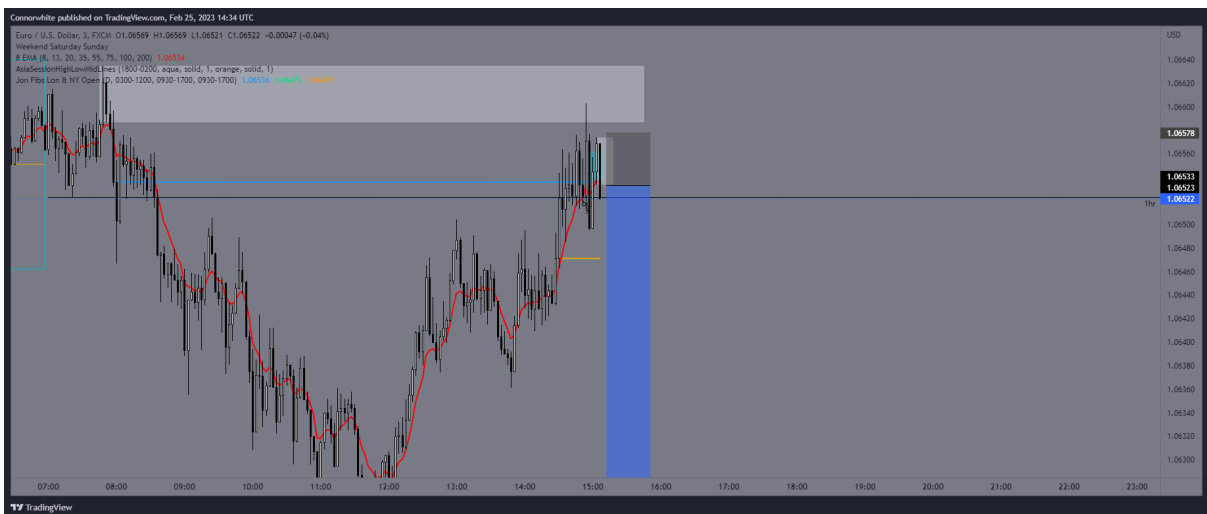

Price come up to top poi for the 1hr imbalance fill and come to 5min extreme, looking for re dsitro now after this nice 1min bos to sell

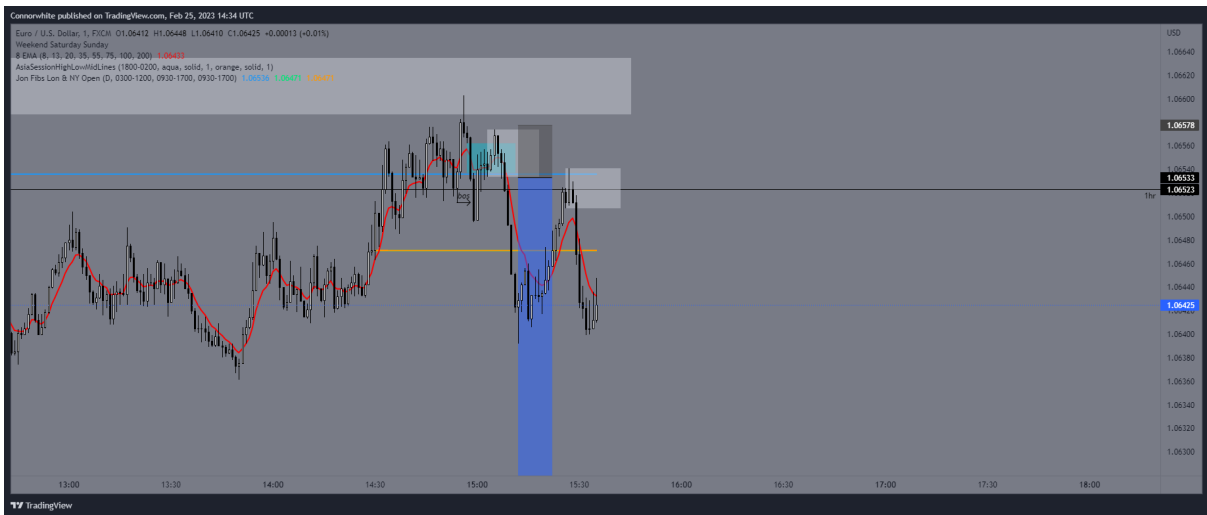

1min bos can sell here

Also 3min engulfing

Didn't get filled plus when come back up the next re dsistro didn't fill either

Thursday –

Price has made new 4hr range so ideally looking for nicer retracement up but well see

1hr in this bearish range so could respect either poi in that leg or come to top area

5 and 15min bos to downside from first area, looking for re dsitro inside of here

New 1hr range created looking for re dsitro out of ifc really

5min bos inside 1hr poi looking for redsitro out of here

1min bos inside of 5min area, want to sell from this 1min poi near 50% of the push

Did do 3% then come back up to b/e unless took partials or profits

Price come back up and got 1min bos can sell here to target lows

Tp smacked 4%

**Friday –**

Pricc is bearish on 1hr still so looking for more sells down really

Price just sold off and moved shit
