

Integrate & automate card payments with the **Extend API**

Automate your payment operations and streamline workflows by integrating Extend directly into your core business applications.

The most flexible API for making and managing card payments

- ✓ The Extend API works with your existing card program, so you can maximize rebates
- ✓ Enhance security and mitigate fraud with the power of virtual cards
- ✓ Easily code to our API and webhooks with open documentation
- ✓ Get hands-on support from the Extend team

Automate payments at scale

Issue and manage virtual cards from your core systems

Set strict security controls

Dynamically control card limits on unique virtual cards

Instantly match transactions

Automatically tag virtual cards with metadata to streamline reconciliation

How it works

Integrate the API into any open application—like CRM or ERP software, procurement platforms or proprietary applications.

Key features

- Create virtual cards from your existing credit line
- Automate card issuing to vendors, employees, or contractors
- Issue cards to recipients using only an email address
- Set custom spending limits and usage restrictions
- Add any custom tags such as GL codes or client IDs
