

Add An Event Listener

```
element.addEventListener(eventType, callbackFunction);
```

HTML element

A event listener should be assigned to a HTML element.

addEventListener

It is a JavaScript method to assign an event to an element.

Event type

There are pre-defined events provided by Javascript, so passing them will assign the specified event to the element.

Callback

A function that will be executed, when the specified event occurs.

example

```
button.addEventListener("click", () =>{
    return console.log("Button clicked");
});
```

Remove An Event Listener

```
element.removeEventListener(eventType, callbackFunction);
```

HTML element

A event listener should be assigned to a HTML element.

removeEventListener

It is a JavaScript method to remove an event from an element.

Event type

There are pre-defined events provided by Javascript, so passing them will assign the specified event to the element.

Callback

A function that will be executed, when the specified event occurs.

example

```
button.removeEventListener("click", () =>{
    return console.log("Button clicked");
});
```
