# Allex was specifically designed to solve your most common project business roadblocks

## Your Challenges

- ○ Complex and long-running projects
- ○ Lacking a complete overview of project and task status
- ○ Constant resource conflicts
- ○ Many unpredictable changes

## The Allex Solution

- ✓ A clear project sequence for the entire company
- ✓ Manage more projects with the same resources
- ✓ Transparent project planning with time buffers
- ✓ Project modeling and risk management

# Coordinate seamlessly with your team - and Allex

## Keep an overview at all times

Allex is a cloud-based software solution for sophisticated project and resource management. Finally, projects, resources and tasks can be seamlessly correlated. Keep track of every level of your organization and discover new opportunities.

## Productivity not bureaucracy

Accelerate your projects and decisions and centrally manage your processes. With Allex, stakeholders have all the information they need to successfully complete projects faster. High scalability makes Allex suitable for all types of companies and projects.

## Easy to use and flexible to work with

It's easy to work effectively with Allex from day one. The SaaS (Software as a Service) architecture means you are provided with all the information you need, regardless of location. So you never lose track of what's going on, whether you're working from home, in the office, or anywhere else.

# A quantum leap forward

## Experience these field-proven benefits

### Transparency  01

- Overlook projects at a glance - at any time and from anywhere
- All information quickly at hand
- Meaningful overviews and filters

### Stay on Course  02

- Smart notifications and alerts
- Send and receive helpful status updates
- Automatic plan adjustment

### Acceleration  03

- Intelligent buffers for shortened project schedules
- Clear order for teams
- Current project status is always visible

### Accountability  04

- Functioning agile teamwork
- Clearly define tasks and responsibilities
- Individual reminders

### All-In-One Software  05

- Integrated task, employee and resource management
- Strategic capacity planning and control

### Efficiency  06

- Less effort through intuitive operation and standardized work steps
- Predefined, intelligent templates
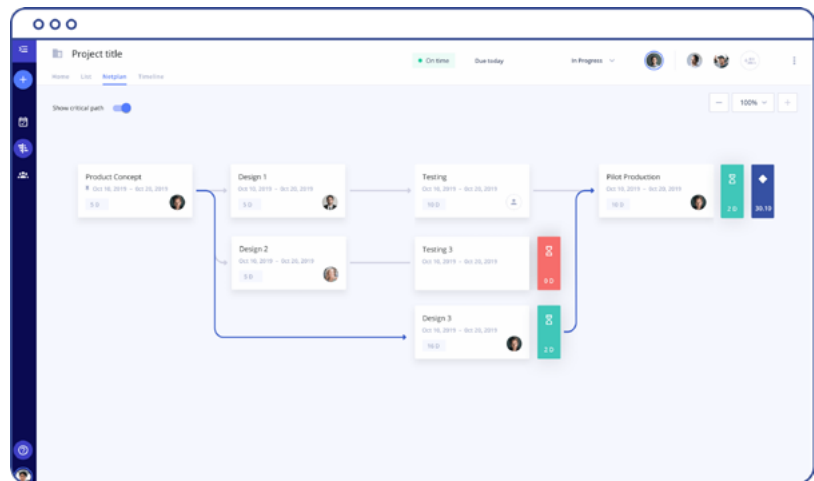

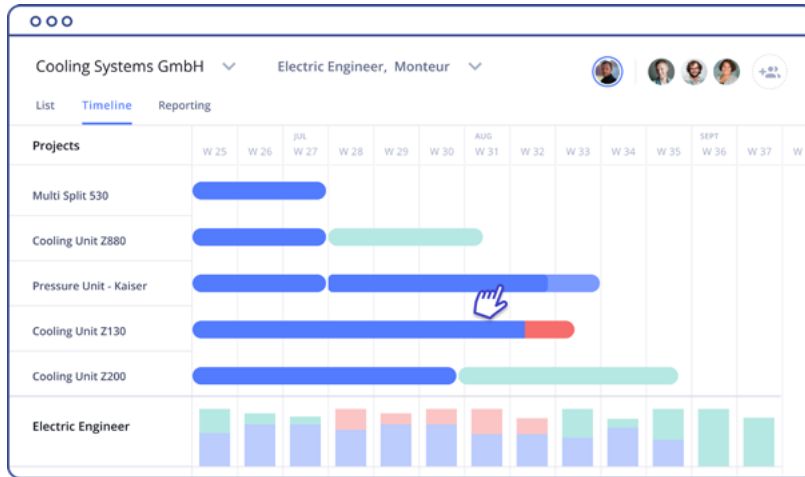

### Reliability  07

- Simulation of future workloads and early detection of bottlenecks
- Hedge project risks with intelligent time buffers

### User-friendly  08

- Software as a Service: Simply start via browser

# Simple and effective project planning with Allex

# Leading companies from a wide range of industries choose Allex

We are convinced that software must be reliable and easy to work with. Programs should work for you - not the other way around. That's why Allex integrates easily into day-to-day business and enables effective management of project portfolios without complex training.

And thanks to Allex's SaaS architecture, our customers enjoy maximum flexibility and can work from anywhere.

Multi-stakeholder project management, resource and task management, and changing privacy and security requirements; with Allex, you have an all-in-one tool that covers the entire spectrum of modern project and resource management.

Allex is suitable for all types of organizations and projects, and its features can be scaled to fit organizations of any size.

> " With Allex we have managed to make project plans reflect reality. The status is transparent, which enables us to react to deviations at an early stage and to actively control them. All areas are involved and give their feedback in Allex. "

### Pascal Kottenstein

Head of Project Management and Industrial Engineering, Groninger

# Accelerate your projects

Allex's intelligent algorithms allow you to do more than just see the best course of action for your project.

Allex can tackle complex project portfolios, providing a logical order to numerous sub-projects and tasks. It enables you to deploy resources with avoiding bottlenecks in mind, and ensures transparency across the entire project portfolio. All this can be managed in one solution that is visually appealing, flexible to use and easy to learn.

Allex's functionality builds on several theoretical methods that have proven themselves in modern project management. Bottleneck theory (or "Theory of Constraints") teaches you how to deal with bottlenecks, and Critical Chain Project Management (CCPM), which was developed from it, improves working with uncertainties e.g. using

risk buffers. If you want to keep your finger on the pulse of the times, you should be open-minded in regard to new agile working methods. We are not only trendsetters when it comes to project methods, but are also constantly developing our software to keep up with everything that makes projects more successful at all times.

"Most companies continue to think about how to connect their IT systems, instead of bringing people and processes together."

Holger Lörz on Welt.de

## Project management

From clearly defined responsibility for tasks to advanced overviews; Allex provides all stakeholders with the information they need.
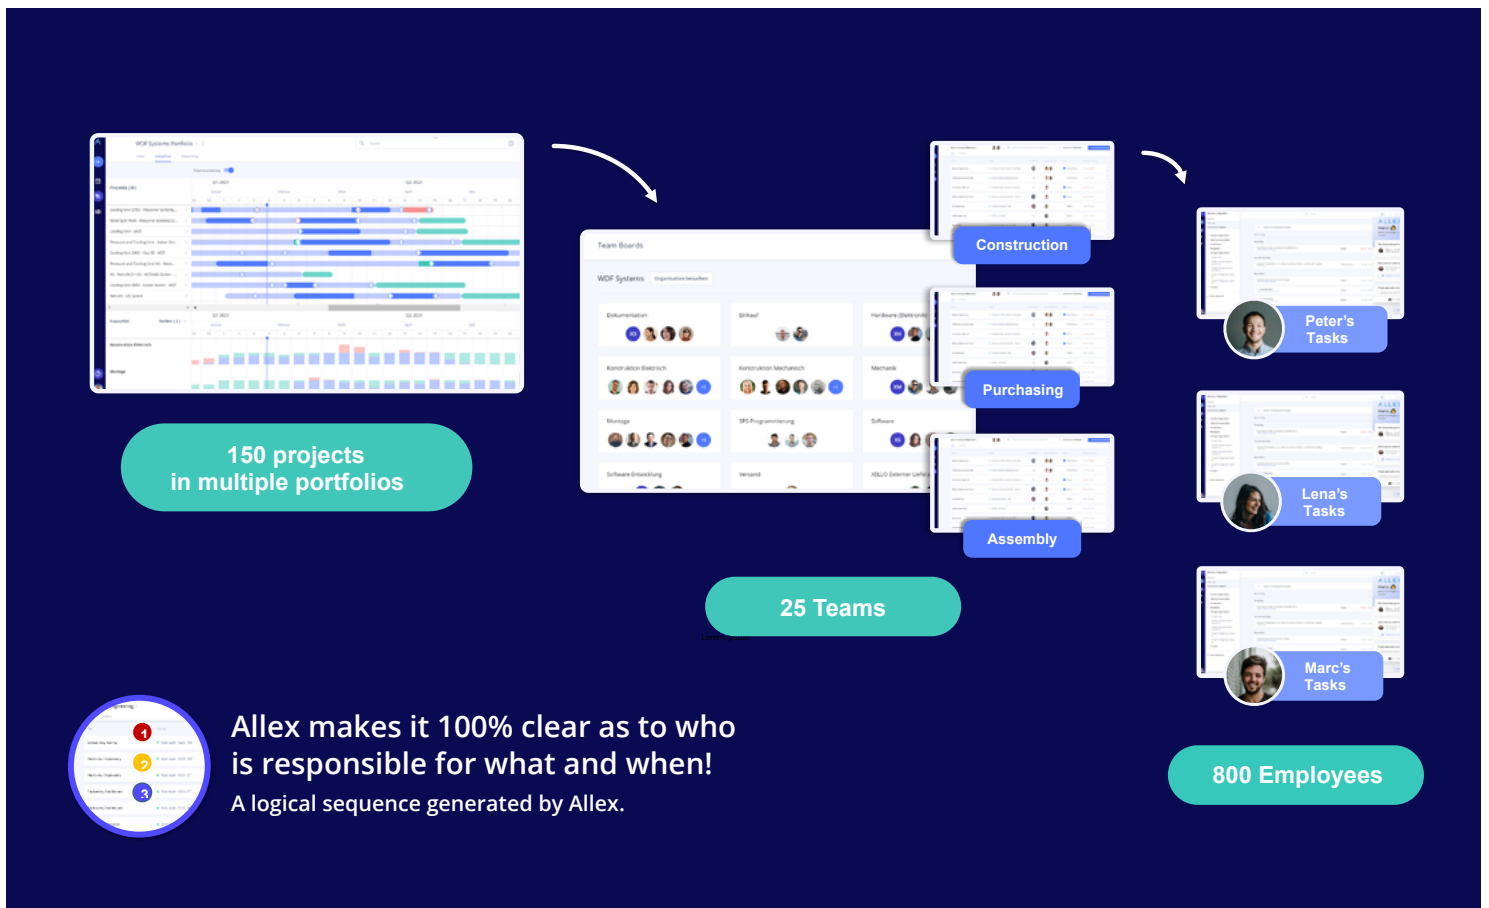

## Manage capacities

Successful companies look ahead to the future. With Allex, you can identify capacity bottlenecks early on and easily integrate upcoming projects into the overall portfolio - even before they begin: This allows you to predict future capacities easily and with high accuracy.

## Portfolio management

Allex's intelligent staging algorithm highlights potential bottlenecks, increases transparency throughout the organization and ensures that your portfolio plan is always up-to-date.

## Project planning and control

Projects can be better controlled with different visualizations. Allex therefore has network diagrams, Gantt charts, list views and other means to help you work effectively.

## Effective collaboration over frustration

Teamwork with Allex means no more constantly changing priorities and jumping back and forth between tasks. Clear responsibilities and maximum transparency are the key to more projects with the same team.

"We have increased project throughput by 25%. With Allex we manage to produce more machines in less time.

**Remo Rickler**
CSO, Christof Fischer GmbH

# Whether you're a CEO, project manager or intern, you'll have greater visibility across all departments and teams

Allex adapts to your needs and can grow with you at scale. Whether you're working with a handful of colleagues or hundreds, Allex provides all stakeholders with the views and data they need to ensure the success of ongoing projects.

### Everything starts with a team

Start working on a project by inviting team members to the project and assigning them different roles. At the same time, you can define concrete responsibilities and assign permissions; this way, you ensure that the subsequent flow of information works very well.

### Share progress and get feedback

You can give third parties, such as your customers or service providers, access to selected elements or the entire project while the project is running. Via a shared link, you can thus transparently communicate the project progress to the outside or obtain missing information from your project partners.

### Need third parties involved? No problem!

It is always possible to integrate third parties into the concrete project work. You can simply invite partners or external contributors to projects (or just individual tasks) and, of course, individually determine what information and notifications they receive.

If certain specialists or resources are needed to expand the team, Allex will suggest the resources that are available at that time.

# ALLEX

## Multi-Project Manager

Overview of all portfolio, projects and team capacities

## External Participant

Briefings for selective involvements and individual tasks

## Specialist Department

Implementation of various tasks with defined goals and responsibilities

## Project Manager

Contact person for stakeholders, as well as ongoing project management

## Team Lead

Provide employees for projects

## Quality Control

Quality handovers as well as adjustments with checklists.

## Head of Department

Quickly identify any bottlenecks within teams

## Managing Directors

Stay in control with reports, evaluations & decision templates

"

We have a tool that is simple, great value for money and gives us the level of transparency we need.

Ingo Körner
Former CFO,
Broetje-Automation GmbH

"

# The Allex Platform

Only if projects, resources and tasks are linked in a system can conflicts and bottlenecks be identified early on. Working with individual Excel lists, of which many project and team leads have their own, or assigning tasks via email: all this is outdated and is mapped more intelligently by digital solutions like Allex.

With Allex as a reliable all-in-one solution, you can assign tasks faster, estimate resources better, and make your projects succeed faster.

# Enabling the success of the project portfolio and promoting resource efficiency

## The benefits of working with SaaS

Allex combines all the advantages of Software as a Service (SaaS): first and foremost being the freedom of location independence and no complex IT infrastructure necessary.

## Security first

No installation required! Start immediately in the browser. Even software updates are a thing of the past - you always work with the latest version.

We host in an ISO 27001-certified, high-security data center for maximum security. In addition, we follow DSGVO regulations for all data.

Whether you work in the office, home office or on the road - you always have full access to all processes. Our low monthly costs mean you only pay for what you really need. After a free trial period, you can decide on the plan that suits you.
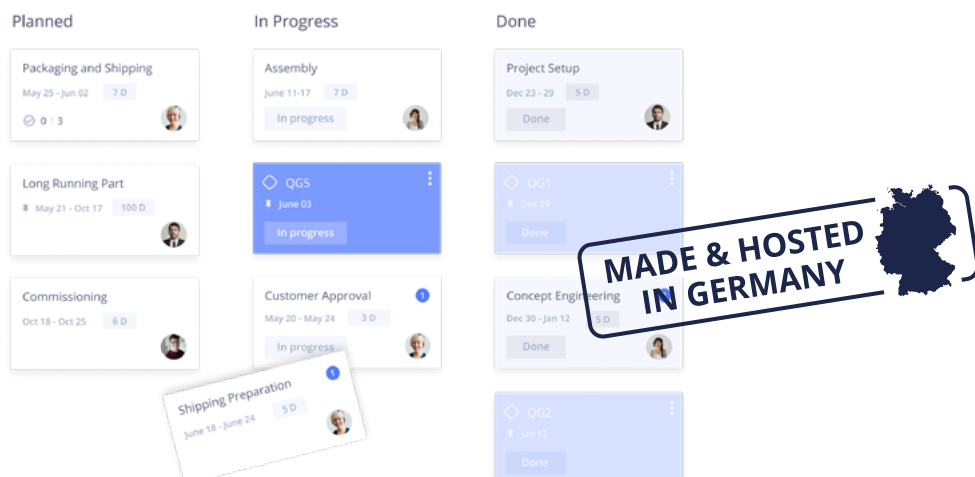

## Project Portfolio Management

To better estimate and plan future capacities, Allex allows you to run realistic simulations. Find out precisely which resources are available for upcoming projects when, and determine the moat effective start date.

## Work smart with templates & capacity planning

You will find all your projects in one compact overview. Smart templates for different project types will make your daily work much easier.

Easily simulate upcoming months or even years through scenario planning. All projects are considered in relation to your teams' capacity.

The simple staggering of your planned projects yields easily understandable results. Export the most important key figures and data of the project portfolio for your reporting.

# Project Management

Fast, faster, Allex. With our software, it takes less than 2 minutes to set up new or template-based projects. If you work in a team, you'll get feedback at the right time - your project plans will be automatically adjusted and you'll be notified.

## Fast planning - even faster implementation

### Ready-made Templates

In Allex you will find templates for different types of projects. With predefined links, time buffers and project phases, you can save yourself the hassle of setting up a project plan. After just a few adjustments, your project is ready to go.

## Your individual templates

Once you have created or customized a template in Allex, you can save it for later use in your organization. This will make future projects run even faster for you and your colleagues.

### Book availabilities reliably

Your team is the engine that drives every project. In Allex, the required resources for defined tasks can be booked in the pre-planning of each project - your team will be briefed accordingly.

## Task-Management

From concept to reality; plan the perfect start to a new project by structuring tasks. Keep track of all tasks in progress, incoming and pending. It's just as easy to assign specific tasks to a project.

Projects are individual: a dedicated workspace allows you to create and structure private tasks as well as your own mini workflows.

## Resource Management

Project planning without resources just doesn't make sense! Your resources matter, so it's important to have a full overview of your teams' activities. Team leaders can use Allex to create realistic schedules and receive a notification when a team member is "overbooked". Balancing effective availability and realistic workload has never been easier.

# Deploying employees effectively

## Functions and Roles

In Allex, it is easy to assign specific functions or roles to your employees. These can be determined individually from project to project. Together with the respective responsibilities, the result is a well-rounded picture and nothing standing in the way of efficient collaboration.

## Team Board

Transparency within the team is critical to project success: the team board in Allex combines all team members' tasks and aligns them with each individual's personal availability. Training or spontaneous absences - for example, due to illness - can thus be better compensated and rescheduled. Each team member can enter and manage their own absences.

## Vacation, holidays and other absences

"All work and no play makes Jack a dull boy": Send your employees on a well-deserved vacation - knowing that the progress of the project is secured. Of course, Allex also takes into account all holidays and provides you with a time-based project forecast you can rely on.

## Offices in Berlin & Munich

And all-in-one solution for project portfolios, resources and tasks.

Setting the gold standard in project portfolio, resource and task management software.

A team dedicated to changing the future of project management
