

how to: build a wind tunnel

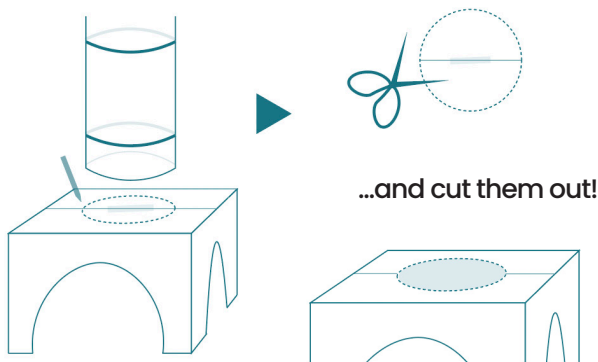

1 roll the plastic sheet around the embroidery hoops to securely make a cylindrical figure

2 cut your cardboard boxes to make two levels & make sure to cut out openings on all sides for airflow

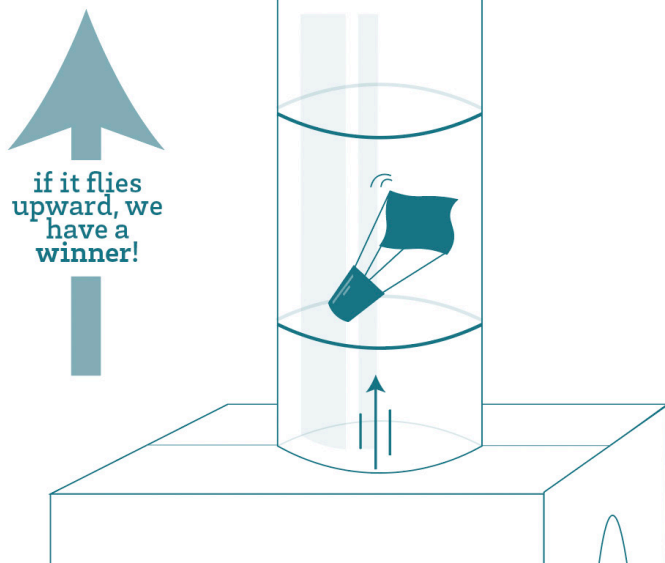

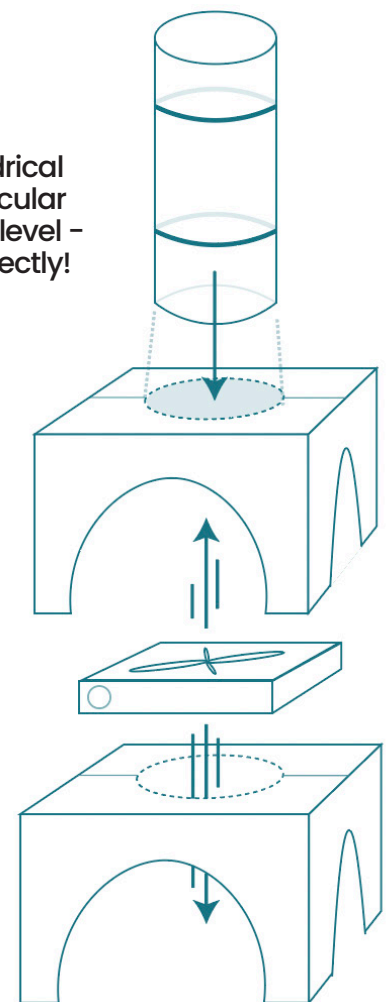

3 trace the cylindrical tunnel on the top surface of both levels of the cardboard boxes

4 place the cylindrical tunnel in the circular hole on the top level - it should fit perfectly!

5 place the fan on top of the bottom level facing up, towards the top level

6 turn the fan on and it's time to test it out! place your prototype on top of the working fan through one of the cut-out sides!
