

GROWING HEALTHY FUTURES

Educators everywhere are searching for ways to bring their classroom lessons to life. Finding a learning tool that's interesting, engaging and hands on is a win-win. Flex Farms offer a multi-disciplinary approach that makes learning fun and instantly engaging. The short turnaround time between planting and harvesting also really drives home lesson plans.

With a robust curriculum package, the Flex Farm is an innovative tool for STEM applications. Students learn while growing high-quality, nutritious produce. Fresh, student-grown crops are then used in school food programs, donated to local food pantries and incorporated into micro-enterprise and fundraising projects.

Fork Farms is here to help you produce engaged learners AND bountiful crops. It's easy! Order a Flex Farm, follow the Grow Guide and enjoy the learning and your many harvests.

K-12

Includes comprehensive K-12 curriculum

20

Grow more than 20 lbs of leafy greens in 28 days

1,900

Harvest over 1,900 servings of leafy greens annually

<\$1⁵⁰

Costs less than \$1.50 a day to operate

2-3

Only takes 2-3 hours a month

The Flex Farm is revolutionary for education because it allows students and teachers to use it as a flexible, hands-on and interdisciplinary tool for teaching that goes beyond traditional "sit and get" teaching methods.
