VELOBLEND

Advanced Liquid Polymer Activation Technologies

The result of over 30 years pursuing optimum polymer performance and system reliability.

AS IT TURNS OUT, IT IS POSSIBLE TO PATENT "AND"

While the rest of the polymer equipment industry was engaged in a mechanical versus non-mechanical system debate, VeloDyne developed the next generation of advanced polymer activation technologies, a hybrid of the two approaches.

VELODYNE

A company driven to deliver the very best Polymer Blending, Chemical Feed, and Bulk Solids Handling Systems, fueled by constantly asking, "What If?"

VELOBLEND

Advanced Liquid Polymer Activation Technologies

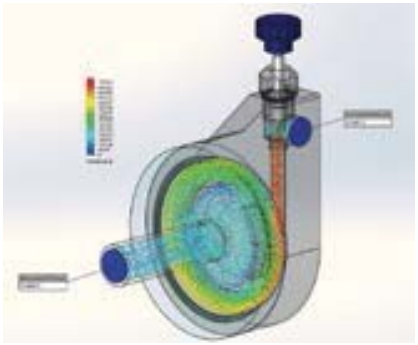
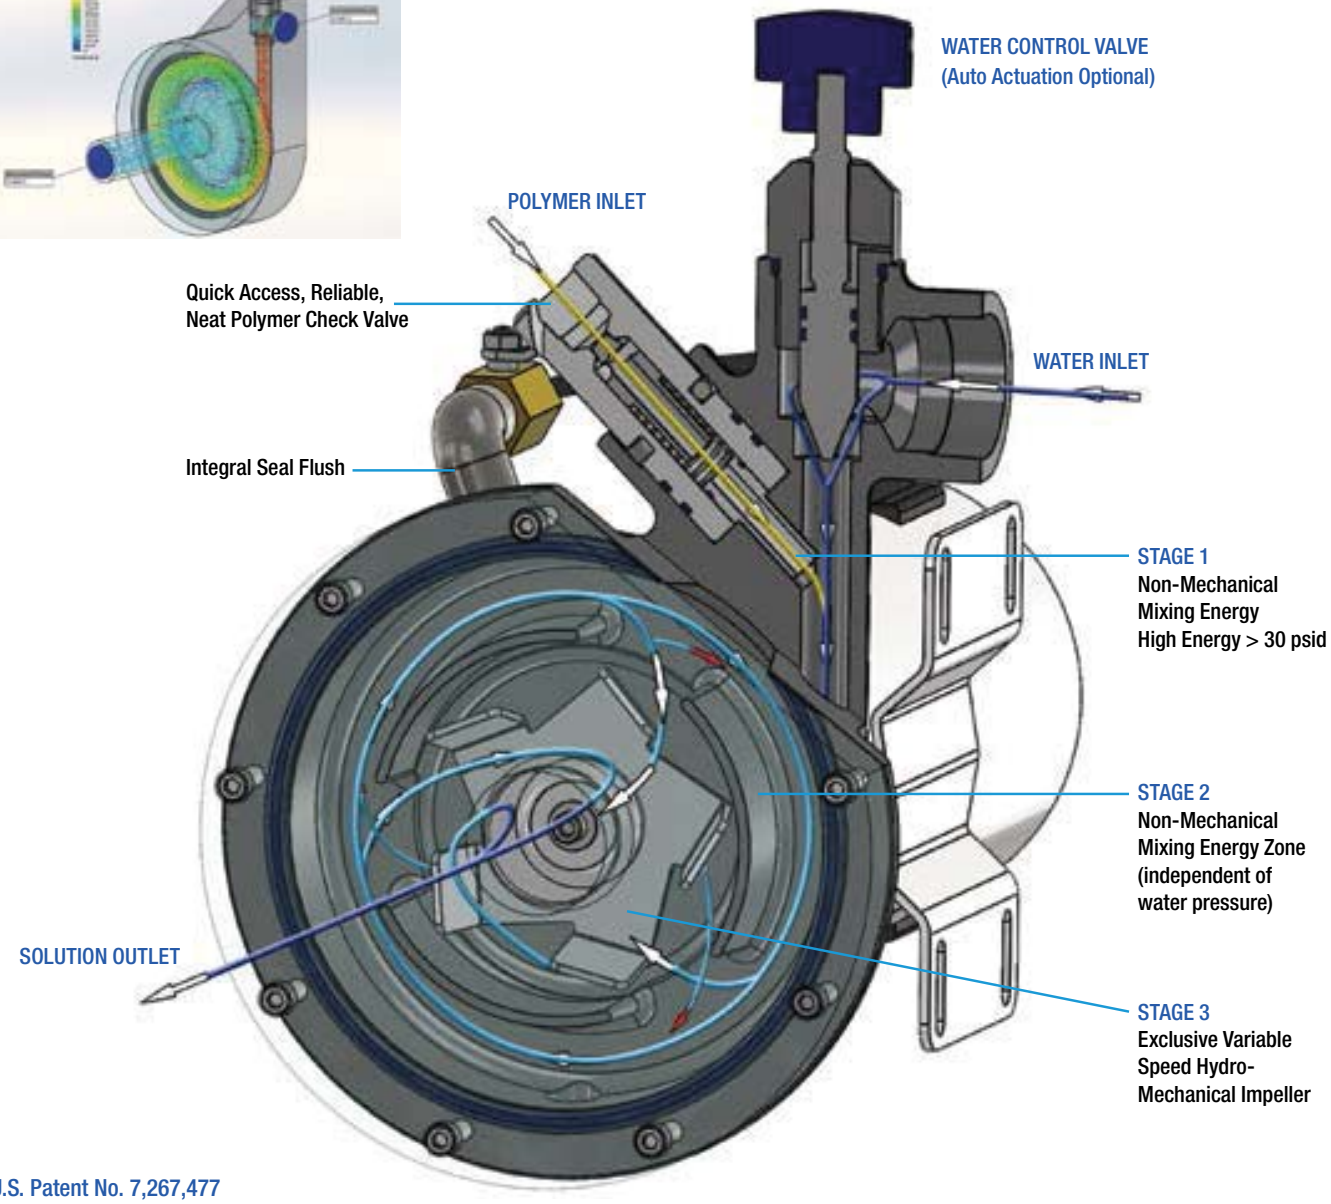
EXCLUSIVE HYBRID ACTIVATION TECHNOLOGY

We started by perfecting hydro-dynamic, non-mechanical mixing energy. Born from thirty years of experience, the VeloBlend VH series optimizes the use of non-mechanical mixing energy, exceeding the performance and reliability over existing technologies.

We then eliminated the biggest drawback to non-mechanical blending—its reliance on water pressure. The VeloBlend™ hybrid polymer activation technology combines the reliability of hydro-dynamic, non-mechanical mixing energy with controllable, variable speed hydro-mechanical mixing energy. This process allows for precise control of mixing conditions, allowing optimal performance of any polymer available.





U.S. Patent No. 7,267,477

VELODYNE

VELOBLEND

Advanced Liquid Polymer Activation Technologies

THE VERSATILE VELOBLEND SYSTEM

1. **ACTIVATION CHAMBER**
   VeloBlend Advanced Liquid Polymer Activation Technology delivers unsurpassed performance and reliability.

2. **DILUTION WATER SYSTEM**
   Up to 600 GPM to meet your application requirements.

3. **NEMA 4X CONTROLS**
   Five standard control systems are available to meet your specific control requirements.

4. **NEAT POLYMER PUMP**
   Progressive cavity pumps standard. Other pump types optional.

5. **RUGGED STAINLESS STEEL SKID**
   Available in 304 or 316 stainless steel. Open design for ease of maintenance. Designed to provide ideal pump suction conditions.

SERIES 6000
- Skid Configuration #2
- Progressive Cavity Pump
- 0.2 to 100 GPM Solution
- Control Levels D thru RpSB

SERIES 2400
- Skid Configuration #1
- Progressive Cavity Pump
- 0.2 to 50 GPM Solution
- Control Levels D & E

SERIES 12000
- Skid Configuration #3
- Progressive Cavity Pump
- 0.2 to 200 GPM Solution
- Control Levels D thru RpSB

SERIES 36000
- Skid Configuration #4
- Progressive Cavity Pump
- 40 to 600 GPM Solution
- Control Levels D thru Rw

VELOBLEND

Advanced Liquid Polymer Activation Technologies

OPTIMIZING LIQUID POLYMER PERFORMANCE

There have been numerous technologies introduced over the last thirty years designed to activate liquid polymer. The advanced hybrid VeloBlend™ technology has proven to more efficiently induce ultra-high, non-damaging mixing energy, delivering the highest polymer performance over any other technology in the industry.

The VeloBlend is simply the best polymer activation technology ever developed.

—polymer consultant with over 30 years of industry experience

NEAT "AS-SUPPLIED" POLYMER

Neat polymer, as supplied, is primarily comprised of coiled-up polymer, oil, water, and inverting surfactant.

UNACTIVATED POLYMER MOLECULE— CAPABLE OF WITHSTANDING HIGH MIXING ENERGY

In its "neat" (as-supplied) state, the polymer is coiled up like a spring and is capable of withstanding ultra-high mixing energy without damage to its molecular structure.

DAMAGED POLYMER—CAUSED BY EXCESSIVE SHEAR

Once the polymer uncoils, the elongated polymer is now susceptible to damage caused by excessive shear. The result is increased polymer usage, increased polymer cost and reduced process performance.

PARTIALLY UNCOILED POLYMER-INSUFFICIENT MIXING ENERGY

If polymer is exposed to insufficient mixing energy, the polymer fails to fully activate with the same negative results in polymer cost and process performance as is seen with damaged polymer.

FULLY ACTIVATED, UNDAMAGED POLYMER— DELIVERING OPTIMAL PERFORMANCE

When neat, coiled-up polymer is properly exposed to ultra-high mixing energy, the oil is effectively "scrubbed" from the polymer, allowing it to become highly activated without damage.

The VeloBlend's hybrid technology more effectively induces ultra-high, non-damaging mixing energy over the system's full flow range than any other technology on the market.
