## Demographics

## Population

## Total Population and Percent Change

A total of 245,546 people live in Chelan, Douglas, Grant, and Okanogan counties. The change in population reports the percent difference in population counts from the 2000 Census population estimate to the 2010 Census population estimate. This is relevant because a positive or negative shift in total population over time impacts healthcare providers and the utilization of community resources. (See Table 1)

Total Population, 2010-14

Percent Change in Total
Population, 2000-2010

Data Source: US Census Bureau, 2010-14

## Population Density

The population density for the NC ACH, estimated at 19.4 persons per square mile, is quite a bit less than the Washington and national average population density of 103.8 and 88.93 persons per square mile, respectively. (See Table 1)

Population Density, 2010-14

Data Source: US Census Bureau, 2010-14

## Racial and Ethnic Population Distribution

The racial and ethnic population is important to understand because each racial and ethnic group potentially has unique health needs and barriers (ie. cultural, linguistic, etc) and should be considered separate from other racial and ethnic groups. In each of the counties the highest percentage is White non-Hispanic followed by Hispanic. It is important to note that the percentage of White non-Hispanic is lower in each county than the Washington State percentage and the Hispanic percentage is quite a bit higher than the Washington State percentage.

Population, Percent by Race, 2010-14

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2010-14
Population, Percent by Race, 2010-14

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2010-14

## Age Distribution

The age distribution is important to understand because each age group of the population has unique health needs which should be considered separately from other age groups. (See Table 1)

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2010-14

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2010-14

# Age Distribution, by Ethnicity, 2010-14 

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2010-14

## Median Age

This indicator reports the median age of the population. This indicator is relevant because the age demographics of a population indicate the potential for age-specific conditions and a demand for related services. (See Table 1)

Data Source: US Census Bureau, 2010-14

Population Age 65+
This indicator reports the percentage of seniors aged 65 and older in a specific geographic area. This indicator is relevant because it is important to understand the percentage of seniors in the community, as this population has unique health needs which should be considered from other age groups. (See Table 1)

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2010-14 healthcare access, provider communications, and health literacy/education. (See Table 1)

Linguistically Isolated Population
This indicator reports the percentage of the population aged
5 and older who speak a language percentage of the population aged
5 and older who speak a language other than English at home and speak English less than "very speak English less than "very because an inability to speak English well creates barriers to

Linguistically Isolated Population

Data Source: US Census Bureau, 2010-14

## Foreign-Birth Population

This indicator reports the percentage of the population that is foreign-born. The foreign-born population includes anyone who was not a U.S. citizen or a U.S. national at birth. This includes any non-citizens, as well as persons born outside of the U.S. who have become naturalized citizens. The native U.S. population includes any person born in the United States, Puerto Rico, a U.S. Island Area (such as Guam), or abroad of American (U.S. citizen) parent or parents. The latest figures from the U.S. Census Bureau show that 36,271 persons in the report area are of foreign birth, which represents $14.77 \%$ of the report area population. This percentage is greater than the national rate of $12.95 \%$. (See Table 1)

Foreign-Birth Population, 2010-14

## Social and Economic Factors

## Economic Factors

Poverty
Poverty is relevant because poverty creates barriers to access including health services, healthy food, and other necessities that contribute to poor health status. (See Table 2a)

## Population in Poverty, 2010-14

Data Source: US Census Bureau, 2010-14

Data Source: US Census Bureau, 2010-14

Data Source: US Census Bureau, 2010-14

Data Source: US Census Bureau, 2006-10, 2010-14

## Free and Reduced Lunch

Within the report area 31,589 public school students or $64.34 \%$ are eligible for Free/Reduced Price lunch out of 49,840 total students enrolled. This indicator is relevant because it assesses vulnerable populations which are more likely to have multiple health access, health status, and social support needs. Additionally, when combined with poverty data, providers can use this measure to identify gaps in eligibility and enrollment. (See Table 2a)

> Percent of Children Eligible for Free/Reduced Price Lunch, 2013-14

Data Source: National Center for Education Statistics, Common Core of Data, 2013-14

Public Assistance Income This indicator reports the percentage of households receiving public assistance income. Public assistance income includes general assistance and Temporary Assistance to Needy Families (TANF). Separate payments received for hospital or other medical care (vendor payments) are excluded. This does not include Supplemental Security Income (SSI) or noncash benefits such as Food Stamps. (See Table 2a)

## Percent of Households with Public Assistance Income, 2010-14

Data Source: US Census Bureau, 2010-14

## Unemployment Rate

This indicator is relevant because unemployment creates financial instability and barriers to access including insurance coverage, health services, healthy food, and other necessities that contribute to poor health status. Our region experiences considerable seasonal variation in unemployment rates. For the NC ACH region, the highest unemployment rate between July 2015 and July 2016 was January 2016 at $9.5 \%$ and the lowest unemployment rate was September 2015 at 4.7. (See Table 2b and 2c)

## Unemployment Rate

Data Source: US Department of Labor, Bureau of Labor Statistics, 2016

## Unemployment Rate

Data Source: US Department of Labor, Bureau of Labor Statistics, 2016

## Supplemental Nutrition Assistance Program (SNAP) Recipients

This indicator reports the average percentage of the population receiving the Supplemental Nutrition Assistance Program (SNAP) benefits. This indicator is relevant because it assesses vulnerable populations which are more likely to have multiple health access, health status, and social support needs; when combined with poverty data, providers can use this measure to identify gaps in eligibility and enrollment. (See Table 2d)

## Supplemental Nutrition Assistance Program Recipients

Data Source: US Census Bureau, Small Area Income \& Poverty Estimates, 2013

## Access to Healthy Food

## Food Deserts

This indicator reports the percentage of the population living in census tracts designated as food deserts. A food desert is defined as a low-income census tract (where a substantial number or share of residents has low access to a supermarket or large grocery store. This indicator is relevant because it highlights populations and geographies facing food insecurity. (See Table 2e)

Food Insecurity, 2010

Data Source: US Department of Agriculture, 2010

## Food Insecurity Rates

This indicator reports the estimated percentage of the population that experienced food insecurity at some point during the report year. Food insecurity is the household-level economic and social condition of limited or uncertain access to adequate food. (See Table 2e)

Food Insecurity, 2013

Data Source: Feeding America, 2013

## Fast Food Restaurants

This indicator reports the number of fast food restaurants per 100,000 population. Fast food restaurants are defined as limited-service establishments primarily engaged in providing food services (except snack and nonalcoholic beverage bars) where patrons generally order or select items and pay before eating. This indicator is relevant because it provides a measure of healthy food access and environmental influences on dietary behaviors. (See Table 2e)

Data Source: US Census Bureau, 2014

## WIC-Authorized Food Stores

This indicator reports the number of food stores and other retail establishments per 100,000 population that are authorized to accept WIC Program (Special Supplemental Nutrition Program for Women, Infants, and Children) benefits and that carry designated WIC foods and food categories. This indicator is relevant because it provides a measure of food security and healthy food access for women and children in poverty as well as environmental influences on dietary behaviors. (See Table 2e)

WIC-Authorized Food Stores, 2012

Data Source: US Department of Agriculture, 2012

## Education

## On-Time Graduation Rate

This indicator reports the percent of students that receive their high school diploma within four years. It is relevant because research suggests education is one the strongest predictors of health. (See Table 2f)

## On-Time Graduation Rate

- 2008-09 - 2013-14

Data Source: National Center for Education Statistics, Common Core of Data, 2008-09; US Department of Education, 2013-14

## Population with No High School Diploma

This indicator represents the percent of the population age 25 and older without a high school diploma. This indicator is relevant because educational attainment is linked to positive health outcomes. There are large discrepancies in the population with no high school diploma by ethnicity in the region. (See Table 2f)

## Population with No High School Diploma, 2010-2014

Data Source: US Census Bureau, 2010-14

## Population with No High School Diploma

Data Source: US Census Bureau, 2010-14

## Transportation

## Households with No Motor Vehicle

This indicator reports the percentage of households with no motor vehicle based on the latest 5-year American Community Survey estimates. (See Table 2g)

Data Source: US Census Bureau, 2010-14

Non-Emergency Medical Transportation
Non-emergency medical transportation are rides that are offered to Medicaid eligible people who are travelling to a Medicaid covered service. (See Table 2g)

Data Source: People for People, 2012-2016; Data not available for Grant County.

## Insurance

## Population Receiving Medicaid

This indicator reports the percentage of the population with insurance enrolled in Medicaid (or other means-tested public health insurance). This indicator is relevant because it assesses vulnerable populations which are more likely to have multiple health access, health status, and social support needs; when combined with poverty data, providers can use this measure to identify gaps in eligibility and enrollment. (See Table 2h)

## Uninsured Population

The lack of health insurance is considered a key driver of health status. This indicator reports the percentage of the total civilian noninstitutionalized population without health insurance coverage. This indicator is relevant because lack of insurance is a primary barrier to healthcare access including regular primary care, specialty care, and other health services that contributes to poor health status. (See Table 2h)

Percent of Population Receiving Medicaid

Data Source: US Census Bureau, 2008-2014

Percent of Population Uninsured

Data Source: US Census Bureau, 2008-2014

## Affordable Housing

## Housing Cost Burden

This indicator reports the percentage of the households where housing costs exceed $30 \%$ of total household income. The information offers a measure of housing affordability and excessive shelter costs. (See Table 2h)

Percentage of Cost Burdened Households

Data Source: US Census Bureau, 2010-14

## Vacancy Rates

This indicator reports the number and percentage of housing units that are vacant. A housing unit is considered vacant if no one is living in it at the time of interview. Units occupied at the time of interview entirely by persons who are staying two months or less and who have a more permanent residence elsewhere are considered to be temporarily occupied, and are classified as "vacant." (See Table 2h)

Vacant Housing Units, 2010-14

Data Source: US Census Bureau, 2010-14

Assisted Housing
This indicator reports the rate (per 10,000 total households) of HUD-funded assisted housing units available to eligible renters. (See Table 2h)

# HUD-Assisted Units, Rate per 10,000 Housing Units, 2015 

Data Source: US Department of Housing and Urban Development, 2015
Low Income Housing Tax Credit program
The Low Income Housing Tax Credit (LIHTC) program gives State and local LIHTC-allocating agencies the equivalent of nearly $\$ 8$ billion in annual budget authority to issue tax credits for the acquisition, rehabilitation, or new construction of rental housing targeted to lower-income households. This indicator reports the total number of housing units benefiting from Low Income Housing Tax Credits. (See Table 2h)

Low Income Housing Tax Credit Units, 2014

Data Source: US Department of Housing and Urban Development, 2014

## Homelessness

## Point-in-Time Count

Point-in-Time Counts are unduplicated 1-night estimates of both sheltered and unsheltered homeless populations. The 1-night counts are conducted by Continuums of Care nationwide and occur during the last week in January of each year. (See Table 2j)

- Sheltered Homeless People are individuals who are staying in emergency shelters, transitional housing programs, or safe havens
- Unsheltered Homeless People are people who stay in places not meant for human habitation, such as the streets, abandoned buildings, vehicles, or parks.
- Chronically Homeless Individuals are homeless individuals who have either been continuously homeless for a year or more or have experienced at least four episodes of homelessness in the last three years and have a disabling condition.

## Chelan-Douglas Counties Homeless Point-in-Time Count, 2015

Data Source: Chelan-Douglas 2015 Homeless Action Plan

## Lack of Social or Emotional Support

This indicator reports the percentage of adults aged 18 and older who self-report that they receive insufficient social and emotional support all or most of the time. This indicator is relevant because social and emotional support is critical for navigating the challenges of daily life as well as for good mental health. Social and emotional support is also linked to educational achievement and economic stability. (See Table 2k)

## Social and Emotional Heath of Youth

Percent of 6th Graders who answered 'Yes' to the question "Have you ever seriously thought about killing yourself?"

Percent of 8th graders who answered yes to the question "During the past 12 months, did you ever seriously consider attempting suicide?"

Percent of NC ACH 6th graders response to the question "When you feel sad or hopeless, are there adults that you can

Percent of NC ACH 8th graders response to the question "When you feel sad or hopeless, are there adults that you can

Percent of NC ACH 6th graders response to the question "In the last 30 days, how often have you been bullied?"

Percent of NC ACH 8th graders response to the question "In the last 30 days, how often have you been bullied?"

Data Source: Healthy Youth Survey 2012, 2014

## Physical Environment

## Air Quality

## Ozone

Within the NC ACH, 0, or 0\% of days exceeded the emission standard of 75 parts per billion (ppb) in 2012. This indicator reports the percentage of days per year with Ozone (O3) levels above the National Ambient Air Quality Standard of 75 parts per billion (ppb). Figures are calculated using data collected by monitoring stations and modeled to include census tracts where no monitoring stations exist. This indicator is relevant because poor air quality contributes to respiratory issues and overall poor health. (See Table 3)

Data Source: CDC, National Environmental Public Health Tracking Network, 2008, 2012

## Particulate Matter 2.5

This indicator reports the percentage of days with levels particulate matter 2.5 above the National Ambient Air Quality Standard ( 35 micrograms per cubic meter) per year, calculated using data collected by monitoring stations and modeled to include counties where no monitoring stations occur. This indicator is relevant because poor air quality contributes to respiratory issues and overall poor health. (See Table 3)

Data Source: CDC, National Environmental Public Health Tracking Network, 2012

## Recreation and Fitness Facility Access

This indicator reports the number per 100,000 population of recreation and fitness facilities as defined by North American Industry Classification System (NAICS) Code 713940. This indicator is relevant because access to recreation and fitness facilities encourages physical activity and other healthy behaviors. (See Table 3)

Recreation and Fitness Facilities

Data Source: US Census Bureau, 2010, 14

Table 3. Physical Environment

## Clinical Care

## Access to Care

## Access to Primary Care (primary care physicians rate)

This indicator reports the number of primary care physicians per 100,000 population. Doctors classified as "primary care physicians" by the AMA include: General Family Medicine MDs and DOs, General Practice MDs and DOs, General Internal Medicine MDs and General Pediatrics MDs. Physicians age 75 and over and physicians practicing sub-specialties within the listed specialties are excluded. This indicator is relevant because a shortage of health professionals contributes to access and health status issues. (See Table 4a)

Primary Care Physicians Rate

Data Source: US Department of Health \& Human Services, 2013

## Lack of Consistent Source of Primary Care

This indicator reports the percentage of adults aged 18 and older who self-report that they do not have at least one person who they think of as their personal doctor or health care provider. This indicator is relevant because access to regular primary care is important to preventing major health issues and emergency department visits. (See Table 4b)

## Percent of Adults Without Any Regular Doctor

Data Source: Data Source: CDC, Behavioral Risk Factor Surveillance System, 2006-12

## Dental Care Utilization

Dental Care Utilization reports the percentage of adults aged 18 and older who self-report that they have not visited a dentist, dental hygienist or dental clinic within the past year. This indicator is relevant because engaging in preventive behaviors decreases the likelihood of developing future health problems. This indicator can also highlight a lack of access to preventive care, a lack of health knowledge, insufficient provider outreach, and/or social barriers preventing utilization of services. (See Table 4b)

## Dental Care, 2006-2010

Percent of adults with no dental exam in past year
Percent of Adults with poor dental health
Data Source: Data Source: CDC, Behavioral Risk Factor Surveillance System, 2006-10

## Federally Qualified Health Centers

This indicator reports the number of Federally Qualified Health Centers (FQHCs) in the community. This indicator is relevant because FQHCs are community assets that provide health care to vulnerable populations; they receive extra funding from the federal government to promote access to ambulatory care in areas designated as medically underserved.
In June 2016 there were following numbers of FQHCs in each county:

$$
\begin{array}{cccc}
\frac{\text { Chelan }}{3} & \frac{\text { Douglas }}{3} & \frac{\text { Grant }}{4} & \frac{\text { Okanogan }}{6}
\end{array}
$$

Douglas County increased from 0 in 2011 to 3 in 2016 and Okanogan County increased from 3 to 6 from 2011 to 2016. The number of FQHCs remained constant in Chelan County and Grant County during that same time period. (See Table 4b)

Data Source: US Department of Health \& Human Services, Center for Medicare \& Medicaid Services, 2016

## Health Professional Shortage Area

This indicator reports the percentage of the population that is living in a geographic area designated as a "Health Professional Shortage Area" (HPSA), defined as having a shortage of primary medical care, dental or mental health professionals. This indicator is relevant because a shortage of health professionals contributes to access and health status issues.

HPSAs are designated using several criteria, depending on the type of designation. For example, a HPSA may be designated on the basis that medical professionals in contiguous areas are over-utilized, excessively distant, or inaccessible to the population under consideration. HPSAs are also designated based on population-to-clinician ratios. This ratio is usually 3,500 to 1 for primary care, 5,000 to 1 for dental health care, and 30,000 to 1 for mental health care. All Federally Qualified Health Centers and Rural Health Clinics that provide access to care, regardless of patient ability to pay, receive automatic facility HPSA designation. (See Table 4b)

## Population Living in a Health Professional Shorage Area

Data Source: US Department of Health \& Human Services, 2012, 2016

## Access to Mental Healthcare

## Mental Health Care Provider Rate

This indicator reports the rate of the county population to the number of mental health providers including psychiatrists, psychologists, clinical social workers, and counselors that specialize in mental health care. (See Table 4c)

Ratio of Mental Health
Providers:Population

Mental Health Care Provider Rate

Data Source: County Health Rankings, 2013-2016

## North Central Washington Behavioral Health Organization

For the period of $1 / 1 / 2014$ to $3 / 31 / 2016$ :

- The total number of unduplicated clients served across the agencies was 3417 .
- The total number of Requests for Services across the agencies was 4348.
- The total number of intakes completed for enrollment was 3226.

Agencies included are Catholic Family and Child Services, Children's Home Society and Columbia Valley Community Health.

## Cancer Screening

## Breast Cancer Screening

This indicator reports the percentage of female Medicare enrollees, age 67-69, who have received one or more mammograms in the past two years. This indicator is relevant because engaging in preventive behaviors allows for early detection and treatment of health problems. This indicator can also highlight a lack of access to preventive care, a lack of health knowledge, insufficient provider outreach, and/or social barriers preventing utilization of services. (See Table 4b)

Breast Cancer Screening

Data Source: Dartmouth College Institute for Health Policy \& Clinical Practice, 2008-12

## Cervical Cancer (Pap Test)

This indicator reports the percentage of women aged 18 and older who self-report that they have had a Pap test in the past three years. This indicator is relevant because engaging in preventive behaviors allows for early detection and treatment of health problems. This indicator can also highlight a lack of access to preventive care, a lack of health knowledge, insufficient provider outreach, and/or social barriers preventing utilization of services. (See Table 4b)

Females Age 18+ with Regular Pap Test

Data Source: Data Source: CDC, Behavioral Risk Factor Surveillance System, 2004-12

## Colon Cancer Screening (Sigmoidoscopy or Colonoscopy)

This indicator reports the percentage of adults 50 and older who self-report that they have ever had a sigmoidoscopy or colonoscopy. This indicator is relevant because engaging in preventive behaviors allows for early detection and treatment of health problems. This indicator can also highlight a lack of access to preventive care, a lack of health knowledge, insufficient provider outreach, and/or social barriers preventing utilization of services. (See Table 4b)

Adults Age 50+ Ever Screened for Colon Cancer

Data Source: Data Source: CDC, Behavioral Risk Factor Surveillance System, 2004-12

## Diabetes Management (Hemoglobin A1c Test)

This indicator reports the percentage of diabetic Medicare patients who have had a hemoglobin A1C test, a blood test which measures blood sugar levels, administered by a health care professional in the past year. In the report area, 2,839 Medicare enrollees with diabetes have had an annual exam out of 3,167 Medicare enrollees in the report area with diabetes, or $89.6 \%$. This indicator is relevant because engaging in preventive behaviors allows for early detection and treatment of health problems. This indicator can also highlight a lack of access to preventive care, a lack of health knowledge, insufficient provider outreach, and/or social barriers preventing utilization of services. (See Table 4b)

Medicare Enrollees with Diabetes with Annual Exam
(Hemoglobin A1C Test)

- 2003-07 -2012

[^1]
## High Blood Pressure Management

In the report area, $27.2 \%$ of adults, or 46,185 , self-reported that they are not taking medication for their high blood pressure according to the CDC's Behavioral Risk Factor Surveillance System (2006-2010). This indicator is relevant because engaging in preventive behaviors decreases the likelihood of developing future health problems. When considered with other indicators of poor health, this indicator can also highlight a lack of access to preventive care, a lack of health knowledge, insufficient provider outreach, and/or social barriers preventing utilization of services. (See Table 4b)

## Adults Not Taking Blood Pressure Medication When Needed, 2006-10

Data Source: Data Source: CDC, Behavioral Risk Factor Surveillance System, 2006-10

## Pneumonia Vaccinations

This indicator reports the percentage of adults aged 65 and older who self-report that they have ever received a pneumonia vaccine. This indicator is relevant because engaging in preventive behaviors decreases the likelihood of developing future health problems. This indicator can also highlight a lack of access to preventive care, a lack of health knowledge, insufficient provider outreach, and/or social barriers preventing utilization of services. (See Table 4b)

## Adults Age 65+ with Pneumonia Vaccination

- 2004-10 2006-12

[^2]
## HIV Screenings

This indicator reports the percentage of adults age 18-70 who self-report that they have never been screened for HIV. This indicator is relevant because engaging in preventive behaviors allows for early detection and treatment of health problems. This indicator can also highlight a lack of access to preventive care, a lack of health knowledge, insufficient provider outreach, and/or social barriers preventing utilization of services. (See Table 4b)

Adults (Ages 18-70) Never Screened for
HIV/AIDS, 2011-12

Data Source: Data Source: CDC, Behavioral Risk Factor Surveillance System, 20011-12

## Preventable Hospital Events

This indicator reports the discharge rate (per 1,000 Medicare enrollees) for conditions that are ambulatory care sensitive (ACS). ACS conditions include pneumonia, dehydration, asthma, diabetes, and other conditions which could have been prevented if adequate primary care resources were available and accessed by those patients. This indicator is relevant because analysis of ACS discharges allows demonstrating a possible "return on investment" from interventions that reduce admissions (for example, for uninsured or Medicaid patients) through better access to primary care resources. (See Table 4b)

Data Source: Dartmouth College Institute for Health Policy \& Clinical Practice, 2003-12

$€$ Age-Adjusted Death Rate
Data Source: Washington State Department of Health Community Health Assessment Tool. 2011-2015.

## Poor General Health

Within the report area $17.9 \%$ of adults age 18 and older self-report having poor or fair health in response to the question "Would you say that in general your health is excellent, very good, good, fair, or poor?" This indicator is relevant because it is a measure of general poor health status. (See Table 5a)

## Percent of Adults Self-Reported Having Poor or Fair Health

Data Source: Data Source: CDC, Behavioral Risk Factor Surveillance System, 2004-12

## Poor Dental Health

This indicator reports the percentage of adults age 18 and older who self-report that six or more of their permanent teeth have been removed due to tooth decay, gum disease, or infection. This indicator is relevant because it indicates lack of access to dental care and/or social barriers to utilization of dental services. (See Table 5a)

Adult with Poor Dental Health, 2006-10

Data Source: Data Source: CDC, Behavioral Risk Factor Surveillance System, 2006-10

## Life Expectancy

## Life Expectancy for Infants in Years

Life expectancy is the number of years a newborn can expect to live if the current age-specific death rates remain constant.

## Life Expectancy for Infants

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2011, 2015

Years of Additional Life Expectancy Age 60-64
The number of years of additional life a person 60-64 can expect to live, if the current death rates for that group remain constant.

Years of Additional Life Expectancy Age 60-64

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2011, 2015

## Premature Death

This indicator reports Years of Potential Life Lost (YPLL) before age 75 per 100,000 population for all causes of death, age-adjusted to the 2000 standard. YPLL measures premature death and is calculated by subtracting the age of death from the 75 year benchmark. This indicator is relevant because a measure of premature death can provide a unique and comprehensive look at overall health status. (See Table 5b)

## Premature Death (Years of Potential Life Lost)

Data Source: CDC, National Vital Statistics System, 2008-10; County Health Rankings, 2011-13

## Obesity

## Overweight and Obese

Excess weight may indicate an unhealthy lifestyle and puts individuals at risk for further health issues. A Body Mass Index (BMI) of 30.0 or greater is considered obese. A Body Mass Index (BMI) between 25.0 or greater but less 30.0 is considered overweight. (See Table 5c and 5d)

Overweight

Obese

Data Source: CDC, Behavioral Risk Factor Surveillance System, 2006-2012; CDC, National Center for Chronic Disease Prevention and Health Promotion, 2013

## Percent of Youth Overweight or Obese, 2014

[^3]Physical Inactivity
Percent of adults aged 20 and older who self-report no leisure time for activity, based on the question: "During the past month, other than your regular job, did you participate in any physical activities or exercises such as running, calisthenics, golf, gardening, or walking for exercise?". This indicator is relevant because current behaviors are determinants of future health and this indicator may illustrate a cause of significant health issues, such as obesity and poor cardiovascular health. (See Table 5e)

> Physically Inactive

Data Source: CDC, National Center for Chronic Disease Prevention and Health Promotion, 2013

## Inadequate Fruit/Vegetable Consumption (Adult)

In the report area an estimated 126,630 , or $76.2 \%$ of adults over the age of 18 are consuming less than 5 servings of fruits and vegetables each day. This indicator is relevant because current behaviors are determinants of future health, and because unhealthy eating habits may cause of significant health issues, such as obesity and diabetes. (See Table 5c)

## Adults with Inadequate Fruit/Vegetable Consumption, 2005-09

Data Source: CDC, Behavioral Risk Factor Surveillance System, 2006-2012

## Diabetes

## Diabetes - Adults and Medicare Beneficiaries

These indicators are relevant because diabetes is a prevalent problem in the U.S.; it may indicate an unhealthy lifestyle and puts individuals at risk for further health issues. (See Table 5f)

## North Central ACH <br> Percent with Diagnosed Diabetes

Data Source: CDC, National Center for Chronic Disease Prevention and Health Promotion, 2013; Centers for Medicare and Medicaid Services, 2014

Data Source: CDC, National Center for Chronic Disease Prevention and Health Promotion, 2013

## Cancer

## Cancer Mortality

This indicator reports the rate of death due to malignant neoplasm (cancer) per 100,000 population. Figures are reported as age-adjusted rates. This indicator is relevant because cancer is a leading cause of death in the United States. (See Table 5g)

Cancer Mortality

Cancer Mortality, 2010-14

- Male $\quad$ Female

Data Source: CDC, National Center for Health Statistics, 2006-10; CDC, National Vital Statistics System, 2010-14

## Breast Cancer

This indicator reports the age adjusted incidence rate (cases per 100,000 population per year) of females with breast cancer. This indicator is relevant because cancer is a leading cause of death and it is important to identify cancers separately to better target interventions. (See Table 5 g )

Data Source: CDC \& The National Cancer Institute, State Cancer Profiles, 2005-2013

## Cervical Cancer

This indicator reports the age adjusted incidence rate (cases per 100,000 population per year) of females with cervical cancer. This indicator is relevant because cancer is a leading cause of death and it is important to identify cancers separately to better target interventions. Note: small numbers suggest caution in interpreting these rates. (See Table 5g)

Cervical Cancer Incidence

## Cervical Cancer Mortality

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2006-15

## Prostate Cancer

This indicator reports the age adjusted incidence rate (cases per 100,000 population per year) of males with prostate cancer. This indicator is relevant because cancer is a leading cause of death and it is important to identify cancers separately to better target interventions. (See Table 5 g )

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2006-15

## Colon and Rectum Cancer

This indicator reports the age adjusted incidence rate (cases per 100,000 population per year) of colon and rectum cancer adjusted to 2000 U.S. standard population. This indicator is relevant because cancer is a leading cause of death and it is important to identify cancers separately to better target interventions. (See Table 5g)

Data Source: CDC \& The National Cancer Institute, State Cancer Profiles, 2005-2013; Washington State Department of Health, Community Health Assessment Tool, 2006-15

## Lung Cancer

This indicator reports the age adjusted incidence rate (cases per 100,000 population per year) of colon and rectum cancer adjusted to 2000 U.S. standard population. This indicator is relevant because cancer is a leading cause of death and it is important to identify cancers separately to better target interventions. (See Table 5g)

## Lung Cancer Mortality

Data Source: CDC \& The National Cancer Institute, State Cancer Profiles, 2005-2013; Washington State Department of Health, Community Health Assessment Tool, 2006-15

## Lung and Heart Diseases

## Lung Disease Mortality

This indicator reports the rate of death due to chronic lower respiratory disease per 100,000 population. Figures are reported as rates age-adjusted to year 2000 standard. This indicator is relevant because lung disease is a leading cause of death in the United States. (See Table 5h)

Lung Disease Mortality

Data Source: CDC, National Center for Health Statistics, 2006-10; CDC, Nation Vital Statistics System, 2010-14

## Asthma Prevalence

This indicator reports the percentage of adults aged 18 and older who self-report that they have ever been told by a doctor, nurse, or other health professional that they had asthma. This indicator is relevant because asthma is a prevalent problem in the U.S. that is often exacerbated by poor environmental conditions. (See Table 5h)

Asthma Prevalence

Data Source: Behavioral Risk Factor Surveillance System, 2006-2012

## Current Smokers

In the report area an estimated 28,332 , or $16.4 \%$ of adults age 18 or older self-report currently smoking cigarettes some days or every day. This indicator is relevant because tobacco use is linked to leading causes of death such as cancer and cardiovascular disease. (See Table 5h)

Percent of Population Currently Smoking Cigarettes, age-adjusted, 2006-2012

Data Source: Behavioral Risk Factor Surveillance System, 2006-2012

## Smoker Quit Attempts

An estimated $56.54 \%$ of adult smokers in the report area attempted to quit smoking for at least 1 day in the past year. This indicator is relevant because tobacco use is linked to leading causes of death such as cancer and cardiovascular disease and supporting efforts to quit smoking may increase positive health outcomes. (See Table 5h)

## Percent of Smokers with Quit Attempt in <br> Past 12 Months, 2011-12

Data Source: Behavioral Risk Factor Surveillance System, 2006-2012

## Coronary Heart Disease Mortality

Within the report area the rate of death due to coronary heart disease per 100,000 population is 97.8 . This rate is less than the Healthy People 2020 target of less than or equal to 103.4. Figures are reported as rates age-adjusted to year 2000 standard. This indicator is relevant because heart disease is a leading cause of death in the United States. (See Table 5h)

Coronary Heart Disease Mortality
-2006 -10 $\quad$ 2010-14

Data Source: CDC, National Center for Health Statistics, 2006-10; CDC, National Vital Statistics System, 2010-14

## Heart Disease Mortality

Within the report area the rate of death due to heart disease per 100,000 population is 150.6 . Figures are reported as rates age-adjusted to year 2000 standard. This indicator is relevant because heart disease is a leading cause of death in the United States. (See Table 5h)

Heart Disease
Mortality, 2010-14

Age-Adjusted Death Rate, per 100,000 population

Heart Disease Mortality, 2010-14

Data Source: CDC, National Vital Statistics System, 2010-14

## Heart Disease Prevalence

In the NC ACH region, 7,620 , or $4.4 \%$ of adults aged 18 and older have ever been told by a doctor that they have coronary heart disease or angina. This indicator is relevant because coronary heart disease is a leading cause of death in the U.S. and is also related to high blood pressure, high cholesterol, and heart attacks. (See Table 5h)

Heart Disease Prevalence

Data Source: CDC, Behavioral Risk Factor Surveillance System, 2006-12

## Stroke Mortality Rate

Within the report area there are an estimated 40.1 deaths due to cerebrovascular disease (stroke) per 100,000 population. This is greater than the Healthy People 2020 target of less than or equal to 33.8. Figures are reported as rates age-adjusted to year 2000 standard. This indicator is relevant because stroke is a leading cause of death in the United States. (See Table 5h)

Stroke Mortality, 2010-14

[^4]
## Pre-conceptual and Perinatal Health

## Infant Mortality and Infant Deaths

This indicator reports the rate of deaths to infants less than one year of age per 1,000 births. This indicator is relevant because high rates of infant mortality indicate the existence of broader issues pertaining to access to care and maternal and child health. Note: small numbers suggest caution in interpreting these rates. (See Table 5i)

Infant Mortality Rate

Number of Infant Deaths, 2011-15

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2007-15

## Low Birth Weight

This indicator reports the percentage of total births that are low birth weight (under 2500 g ). This indicator is relevant because low birth weight infants are at high risk for health problems. This indicator can also highlight the existence of health disparities. (See Table 5i)

Low Birth Weight

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2007-15

Low Birth Weight, 2011-15

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2007-15

## Birth to Smoking Mothers

## Percent Births to Smoking Mothers

Percent Births to Smoking
Mothers by Ethnicity, 2011-2015

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2007-15

## Teen Birth Rate

This indicator reports the rate of total births to women age of 15-19 per 1,000 female population age 15-19. This indicator is relevant because in many cases, teen parents have unique social, economic, and health support services. Additionally, high rates of teen pregnancy may indicate the prevalence of unsafe sex practices. (See Table 5i and 5j)

Teen Births

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2007-15

Accidents, Homicide, and Suicide

## Motor Vehicle Crash Mortality

This indicator reports the rate of death due to motor vehicle crashes per 100,000 population, which include collisions with another motor vehicle, a nonmotorist, a fixed object, and a non-fixed object, an overturn, and any other non-collision. This indicator is relevant because motor vehicle crash deaths are preventable and they are a cause of premature death. Note: small numbers suggest caution in interpreting these rates. (See Table 5k)

Data Source: National Highway Traffic Safety Administration, 2008-2010; CDC, National Vital Statistics System, 2010-14

## Pedestrian Motor Vehicle Crash Mortality

This indicator reports the crude rate of pedestrians killed by motor vehicles per 100,000 population. This indicator is relevant because pedestrian-motor vehicle crash deaths are preventable and they are a cause of premature death. The Healthy People 2020 target is $\leq 1.3$ per 100,000 population. Note: small numbers suggest caution in interpreting these rates. (See Table 5k)

## Pedestrian Motor Vehicle Crash Average Annual Death Rate, 2011-2015

Total Pedestrian Motor Vehicle Crash Deaths, 2011-2015

[^5]
## Unintentional Injury Mortality

This indicator reports the rate of death due to unintentional injury (accident) per 100,000 population. Figures are reported as rates age-adjusted to year 2000 standard. This indicator is relevant because accidents are a leading cause of death in the U.S. The Healthy People 2020 target is $\leq 36.0$ per 100,000 population. Note: small numbers suggest caution in interpreting these rates. (See Table 5 k )

## Homicide

This indicator reports the rate of death due to assault (homicide) per 100,000 population. Figures are reported as crude rates, and as rates age-adjusted to year 2000 standard. Rates are resummarized for report areas from county level data, only where data is available. This indicator is relevant because homicide rate is a measure of poor community safety and is a leading cause of premature death. Note: small numbers suggest caution in interpreting these rates. (See Table 5k)

## Data Source: CDC, National Vital Statistics System, 2010-14

## Violent Crime

This indicator reports the rate of violent crime offenses reported by law enforcement per 100,000 residents. Violent crime includes homicide, rape, robbery, and aggravated assault. This indicator is relevant because it assesses community safety. (See Table 5k)

Violent Crime, 2010-12

Data Source: FBI Uniform Crime Reports, 2010-12

Suicide
This indicator reports the rate of death due to intentional self-harm (suicide) per 100,000 population. Figures are reported as rates age-adjusted to year 2000 standard. This indicator is relevant because suicide is an indicator of poor mental health. (See Table 5k)

Suicide Rate

Data Source: Washington State Department of Health, Community Health Assessment Tool, 2006-15

## Drug and Alcohol Use

## Alcohol Consumption (adults)

Excessive Drinking is the percentage of adults that report either binge drinking, defined as consuming more than 4 (women) or 5 (men) alcoholic beverages on a single occasion in the past 30 days, or heavy drinking, defined as drinking more than one (women) or 2 (men) drinks per day on average. (See Table 5I)

Excessive Drinking, 2014

Data Source: CDC, Behavioral Risk Factor Surveillance System, 2014

## Alcohol-Impaired Driving Deaths

Percentage of driving deaths with alcohol involvement. Approximately 17,000 Americans are killed annually in alcohol-related motor vehicle crashes. Binge/heavy drinkers account for most episodes of alcohol-impaired driving. An important strength of this measure is that alcohol-impaired driving deaths directly measures the relationship between alcohol and motor vehicle crash deaths. One limitation of this measure is that not all fatal motor vehicle traffic accidents have a valid blood alcohol test, so these data are likely an undercount of actual alcohol involvement. Another potential limitation is that even though alcohol is involved in all cases of alcohol-impaired driving, there can be a large difference in the degree to which it was responsible for the crash (i.e., someone with a 0.01 BAC vs. 0.35 BAC). (See Table 5I)

Alcohol-Impaired Driving Deaths, 2010-14

Data Source: Fatality Analysis Reporting System, 2010-14

## Drug Overdose Deaths

The United States is experiencing an epidemic of drug overdose deaths. Since 2002, the rate of drug overdose deaths has increased by 79 percent nationwide, with a 200 percent increase in deaths involving opioids (opioid pain relievers and heroin) since 2000. (See Table 5I)

Data Source: CDC Wonder, 2012-14

## Drug and Alcohol Use (youth)

Alcohol, tobacco, and other drug use has been a major concern in this country for many years. The consequences of alcohol, tobacco, and other drug use are well known. In the short term, alcohol, tobacco, and other drug use interferes with positive physical, emotional, and social development. In the long term, alcohol, tobacco, and other drug use is associated with delinquency and criminal activity, unintended injuries, and a variety of health complications including shorter life expectancy. (See Table 5I)

Alcohol and Drug Use Among 12th Graders, 2014

Data Source: Healthy Youth Survey, 2014

## Sexually Transmitted Infections

## Gonorrhea Incidence

This indicator reports incidence rate of Gonorrhea cases per 100,000 population. This indicator is relevant because it is a measure of poor health status and indicates the prevalence of unsafe sex practices. (See Table 5m)

## Gonorrhea

Data Source: CDC, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, 2013

## Chlamydia Incidence

This indicator reports incidence rate of Chlamydia cases per 100,000 population. This indicator is relevant because it is a measure of poor health status and indicates the prevalence of unsafe sex practices. (See Table 5m)

Chlamydia

Data Source: CDC, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, 2013

## HIV Prevelance

This indicator reports prevalence rate of HIV per 100,000 population. This indicator is relevant because HIV is a life-threatening communicable disease that disproportionately affects minority populations and may also indicate the prevalence of unsafe sex practices. (See Table 5m)

HIV

Data Source: CDC, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, 2013
