Learn How Sessions
Cannabis Saves 10%
Per Month on On
Labor and Admin
Costs!

Meet the Cannabis Operations Expert.

Today we had the privilege to speak with seasoned cannabis executive Jason Edgar.

Jason currently acts as the director of operations at Sessions Cannabis - overseeing all 21 corporately owned locations and advising franchisees that operate the additional 24 franchised Sessions stores.

Jason is highly versed in the cannabis retail ecosystem. Before his role at Sessions, he opened one of the first legal dispensaries in Kitchener, Ontario, acting as South Western area manager through an acquisition by Canna Cabana. Jason then went on to manage operations at Star Buds 8 locations.

Life before using the KayaPush system.

Before Jason began using KayaPush, he used a far more analog system that required manual data input on things like scheduling and labor percent calculations. Jason found these tasks tedious and knew there had to be a better way.

Jason came across KayaPush through Cova, the Star Buds POS solution.

The two companies had just finalized a robust integration that allowed Jason to view live labor vs. sales data and streamline his employee management processes. It solved his problems, so he adopted it.

Jason found the KayaPush system not only offered more transparency in reports and scheduling automation; but that it was also superior in managing employee information, clock in's, HR lifecycles, and payroll demands.

Jason is happy to be using the system again as he manages operations at Sessions.

"Having one place for centralized documentation is so much easier than navigating multiple systems."

How Does Using KayaPush Make Managing Operations Easy?

Jason leverages the KayaPush system's all-in-one functionality to ensure his team stays compliant, runs efficiently, and has one centralized location where all of the company's vital documents are stored safely. Each part of the integrated system provides a benefit when it comes to managing the corporate teams.

How does KayaPush make dispensary HR Easy?

Jason uses the KayaPush system to manage the entire employee life cycle, from onboarding using the self-onboarding wizard, to storing documents, certifications, and personal staff data in the HRIS.

When we spoke, Jason was also about to move on implementing the applicant tracking solution offered by KayaPush and was excited to hear offer letters would soon be on the menu.

How does KayaPush Make Dispensary Scheduling Easy?

In Jason's previous role, scheduling was one of the biggest manual challenges, taking up valuable admin time each week.

With KayaPush, Jason and his team can leverage scheduling templates, machine learning-generated schedule suggestions, overtime alerts, and time tracking technology that streamlines approved clocked-in hours to payroll.

Jason estimates these improvements save each manager around 10 hours per week, per location. That's 210 hours per week across all of the corporate Sessions stores.

How does KayaPush Make Dispensary Payroll Easy?

Because approved clocked hours can be pushed to payroll, manual calculations are a thing of the past.

With KayaPush, payroll calculations are automated, including overtime, tax deductions, and stat holiday pay calculations.

Employee tax documentation lives on the central database with all other SOPs to ensure compliance. Doesn't get much easier than that.

How Has This Solution Transformed Your Business?

KayaPush has helped make things easier at Sessions for Jason and his team. But more than just metrics, the ease of use of the system paired with the knowledge that everything is taken care of has provided the team the ability to work stressfree.

Thank you, Jason, for sharing your valuable insights with our team.

My favorite thing about the software is that it has made everyone's jobs easier and has reduced stress.
