ICM — Permit Manager, Project Manager, Work Orders, Rounding, Vendor Manager, Safety Manager

ICM FAQ's

Q: Who is ICM for?

A: An Integrated Compliance Management (ICM) system is for any business or organization, large or small, needing to manage multiple facets of regulatory compliance under one umbrella.

Q: Why does ICM matter?

A: To put it simply, it is about control. It's about taking control of every aspect of your facility and knowing what's happening in every department and in real-time.

The complexities of a facility's operations are increasing, and the cost associated with these operations are growing rapidly. Facility management is being asked to do more with less; sometimes much more. With an Integrated Compliance Management (ICM) system, you are now able to do more, much more, for less. Businesses reap the benefits of increased efficiencies by using an ICM system, and they also gain the benefits of fully integrated tools within a single platform. Since all these tools reside in one platform, organizations also take advantage of cost savings versus purchasing multiple, disparate systems.
