

# Lab Inspections

REIMAGINING FACILITY COMPLIANCE

The Lab Inspections tool helps you manage every aspect of your lab inspection process from scheduling to closing the loop on failed tasks. We understand this involves a lot of disciplines, so whether you are on the quality, safety or infection control team you can document all of your findings electronically with photos or any other data point. Our goal is to simplify the scheduling of your upcoming lab inspections by automatically sending notifications to the appropriate parties and providing them with instant access to the required questions. Once the inspection is complete, all of the involved parties will receive notifications for any deficiencies or corrective actions that need to occur with deadlines. But, just in case the deadline isn't met we will automatically escalate the task and reassign it. This means no more wasted time contacting numerous parties and logging information in documents or spreadsheets. Our app will handle all of that for you. For necessary items, we can even integrate with your hospitals CMMS system to prepopulate work orders or generate ILSMs.

## Benefits of Lab Inspections

- ✓ Easy management of lab inspection program
- ✓ Automatically route deficiencies and findings
- ✓ Custom reports and dashboards to support process improvement
