

COLOUR **Stories**

SELECT THE PERFECT COLOUR FOR
YOUR TIMBER WEATHERBOARDS

envIRA®
BY NIAGARA

THE GOOD NEWS

Envira weatherboards and components are machine coated on all faces with an alkyd true primer ready for two top coats of premium quality house paint.

KEEP IT COOL

Using dark paint colours on any surface can generate excessive heat. To safeguard against this select a paint with a 45+ light reflectance value (LRV) rating.

PAINT FOR LONGEVITY

Use a qualified painter and select a quality paint with a gloss level of 10 per cent or more. Apply the first top coat prior to installation and the second within six weeks following installation.

FUTURE PAINTING

As with any painted cladding if the surface is well prepared, painted and maintained then re-painting is only required every 10 to 12 years.

FOLLOW THE RULES

All preparation and painting must meet the current requirements of AS/NZS 2311 Guide to Painting of Buildings and the paint manufacturer's data sheet.

FIND OUT MORE

Refer to Section 4 of our Technical Manual and Installation Guide, which covers Painting and Maintenance or contact our friendly team at Niagara with any questions.

Resene *CoolColours*TM

Resene's CoolColourTM range means it is possible to use slightly darker paint colours to the recommended selection due to a revolutionary reflective pigment in the paint. Paint suppliers will recommend which colours are suitable for timber.

Resene recommends these CoolColoursTM for use on Envira Timber Cladding as they all have a total solar reflectance (TSR) rating of 40% or more.

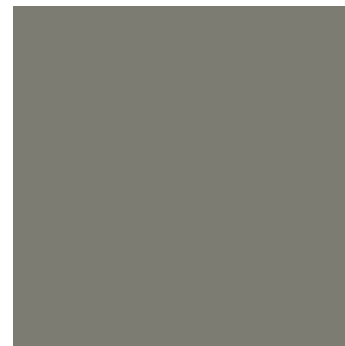

Resene Napa
