

Unlocking efficiency: Asset Infinity empowers an IT client with seamless asset and inventory management across multiple locations

CLIENT PROFILE

Our Client is a big IT and research firm with 15 facilities and more than 30000 employees in India. The firm has high profile clients across multiple industries. The firm also has 10 facilities in the Philippines and has a presence in multiple locations globally.

PROBLEM ASSESSMENT

- As the Client conducts business in multiple locations, they have understandably a varied lot of valuable assets - and spread across locations. However, they were not able to effectively track their assets. This led to a situation where they did not have complete asset visibility of their widespread assets at any point of time.
- The client did not have any kind of inventory management tool and as a result, faced difficulty in managing inventory across all of their facilities
- The client was looking for a single cloud-based software platform where they could manage assets and inventory across multiple facilities and in multiple locations
- The Client wanted a centralised command view and complete tracking of their assets and inventory in a dynamic business environment.

SUMMARY OF MEASURABLE BENEFITS

Cost Saving

Asset Tagging & Tracking - Asset Identification - Asset accountability and monetization

Increase In Earnings

Complete Asset Information, with Command-level Visibility. Data-based decisions - optimum asset assignment

Convenience

Inventory management - real-time monitoring of inventory at multiple facilities and locations

Time Saving

Purchase requisitions and orders - effective management and placement of Purchase requests and orders to prevent low inventory

Error Reduction

Workflow management - setting workflows for effective approval and management of asset and inventory related requests

HOW ASSET INFINITY RESOLVED THE CLIENT'S PROBLEMS

LEGACY STATUS

The client did not have any kind of internal inventory and asset management tool and was not taking help from any external source. As a result, each facility of the client was conducting its own asset and inventory management and the client faced difficulty in coordination between different facilities in different locations

ASSET INFINITY SOLUTION

- Asset infinity is a cloud based software that can be used as a central hub for managing assets and inventory across multiple locations
- With asset infinity, the client was able to monitor and manage assets and inventory across multiple facilities and locations with real-time updates
- This reduced confusion and lead to efficient collaboration and management of assets and inventory across multiple facilities in multiple locations .

LEGACY STATUS

Since the client did not have any asset and inventory management tool, they faced difficulty in managing inventory. In particular, they faced issues managing inventory such as housekeeping and pantry items, electrical appliances and other office supplies across their multiple facilities and locations.

ASSET INFINITY SOLUTION

- With Asset infinity, the issue of inventory management was comprehensively solved for the client
- Asset infinity provided the client with a comprehensive inventory management tool that enabled the client to manage inventory across multiple facilities and locations
- The client was able to make use of various functions such as managing the number of items in inventory, setting reorder levels, moving inventory from one place to the other, drawing inventory for use etc.
- Crucially, the client was able to all this in real time from a centralised platform thereby avoiding confusion and leading too smooth operations between different facilities in different locations

CONCLUSION

- Asset Infinity asset management software was provided to the client for asset and inventory management
- The Client had enterprise-level control with complete asset visibility, comprehensive asset database and asset verification exercises.
- The client also had a comprehensive inventory management system with various features like real time updation, re-order levels etc.
- With Asset Infinity, the Client was able to manage inventory at multiple facilities and locations from a centralised platform with real-time updates.
- Further , the client was able to make use of features such as moving inventory from one location to the other, setting re-order levels for different items, purchase requisition and purchase order management etc.
- To make the solution cater to Client's requirements, necessary customisation was done in the Asset Infinity software.
