

Wilshire Premier Allocation Tax Sensitive Portfolios

As of December 31, 2022

Wilshire Premier Allocation Tax Sensitive Portfolios

The Wilshire Premier Allocation Tax Sensitive Portfolios (the "Portfolios") provide exposure to a variety of asset classes, investment styles, and investment managers including multi-manager funds of Wilshire Mutual Funds, Inc., which are used to enhance diversification and provide access to high conviction investment managers selected by Wilshire's Manager Research Group.

Product Description

- **Risk-based, multi-asset class portfolios** – Wilshire develops forward-looking, strategic forecasts based on proprietary institutional data to determine the asset allocation policy.
- **Dynamic management** – Wilshire dynamically tilts the Portfolios, emphasizing assets and strategies that appear to be attractive and undervalued and de-emphasizing assets and strategies that are not.
- **Institutional investment managers** – The Portfolios are anchored by the Wilshire Mutual Funds, which are subadvised by third-party institutional asset managers.
- **Active mutual fund/passive index fund structure** – Portfolios are constructed with third-party mutual fund managers who are well-regarded by Wilshire's manager research team and serve as experts within the municipal fixed income domain.
- **No strategist fee** – Wilshire is the sponsor and the investment adviser of the Wilshire Mutual Funds (the "Funds") and receives advisory fees based on a percentage of the assets in the Funds.

*Standard Deviation (St. Dev.): a statistical measurement that sheds light on historical volatility. A higher number indicates a higher degree of volatility, by indicating the return on the investment is deviating from the expected normal returns.

Please see the next page for the composition of the custom benchmarks.

Information Regarding Performance Data

The performance results above should be reviewed in the context of the markets applicable to the investment strategies noted. There are certain limitations in model performance as the model results will not completely represent the actual trading of securities in a client account. The results reflect reinvestment of all dividends and interest. All returns for periods greater than one year are annualized. Actual client results will be lower based on the imposition of platform fees, advisory fees, transaction fees and custodial fees by third party firms. Due to differences in share classes and platform restrictions preventing the use of some securities, such as exchange-traded funds, Wilshire's preferred allocation may not be available on all platforms. When a specific security or financial instrument is unavailable, Wilshire will use a substitute security that is suitable in the context of the portfolio's stated investment objective. As with all investments, there is no guarantee that the investment strategy will be successful and investors should be aware that investments can lose money, including principal, so that an investor could end up with less money than was invested. Past performance is not indicative of future results, and processes used may not achieve the desired results. It is not possible to invest directly in an index. Index returns do not reflect payment of certain sales charges or fees an investor may pay to purchase the securities underlying the index or investment vehicles intended to track the performance of the index. The imposition of these fees and charges would cause actual performance of the securities/vehicles to be lower than the index performance shown.

Important Information

This material is for information purposes only. Wilshire is the sponsor and investment adviser of the Wilshire Mutual Funds and receives advisory fees based on a percentage of the assets in the Wilshire Mutual Funds.

Investments in equities are subject to market risk so that shares, when redeemed, may be worth more or less than their original cost. Security prices can fluctuate significantly in the short term or over extended periods of time. These price fluctuations may result from factors affecting individual companies, industries, or the securities market as a whole. **Investments in small cap stocks** may be subject to a higher degree of market risk than large cap stocks, or more established companies' securities. Furthermore, the illiquidity of the small cap market may adversely affect the value of an investment. **Investments in international securities** involve additional risks including currency rate fluctuations, political and economic instability, differences in financial reporting standards, and less stringent regulation of securities markets. In addition, **the risks of investing in emerging market securities** are greater than those of investing in securities of developed foreign countries. **Investments in bonds** are subject to interest rate, inflation, credit, currency and sovereign risks. **Investments in high yield bonds**, often referred to as "junk bonds," are subject to greater credit risk and price fluctuations than higher-quality issues.

Risks of investing in real estate securities are similar to those associated with direct investments in real estate, including lack of liquidity, limited diversification, sensitivity to certain economic factors such as interest rate changes and market recessions, and falling property values due to increasing vacancies or declining rents resulting from economic, legal, political or technological developments.

Investments in tax-free fixed income securities may be subject to other types of risk such as call, credit, liquidity, interest rate and general market risks. There is a risk that a bond issued as tax-exempt may be reclassified by the IRS as taxable, creating taxable rather than tax-free income. A portion of the income derived from the Portfolio may be subject to the Alternative Minimum Tax (AMT). State taxes may apply to some or all of the income derived from the Portfolio, depending on what state issues the underlying securities. Any capital gains realized may be subject to taxation. Investors should consult with a tax advisor for more information regarding taxation.

Model portfolios are exposed to the specific risks of the underlying funds in direct proportion to their percentage allocation. The funds comprising the models and the allocations to those funds have changed over time and may change in the future.
