

WILSHIRE MUTUAL FUNDS
SUMMARY PROSPECTUS
April 30, 2023

Large Company Value Portfolio
Investment Class Shares (DTLVX)
Institutional Class Shares (WLCVX)

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. The Fund's Prospectus and Statement of Additional Information ("SAI") dated April 30, 2023, as may be subsequently amended, are incorporated by reference into this Summary Prospectus. You can find the Fund's Prospectus, reports to shareholders, and other information about the Fund (including the SAI) online at <http://www.wilshire.com/resources-and-forms/wilshire-large-company-value-portfolio-summary-prospectus>. You can also obtain this information at no cost by sending an email to Wilfunds@Wilshire.com, calling (866) 591-1568, or asking any financial advisor, bank or broker-dealer who offers shares of the Fund.

Investment Objective

The Large Company Value Portfolio's (the "Portfolio") investment objective is to seek capital appreciation.

Fees and Expenses of the Large Company Value Portfolio

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Portfolio. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Annual Portfolio Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

	Investment Class	Institutional Class
Management Fees	0.75%	0.75%
Distribution and Service (12b-1) Fees	0.25%	None
Other Expenses	0.29%	0.27%
Total Annual Portfolio Operating Expenses	1.29%	1.02%
Less Fee Waiver/Expense Reimbursement ⁽¹⁾	0.00%	(0.02)%
Total Annual Portfolio Operating Expenses After Fee Waiver/Expense Reimbursement	1.29%	1.00%

⁽¹⁾ Wilshire Advisors LLC ("Wilshire") has entered into a contractual expense limitation agreement with Wilshire Mutual Funds, Inc. (the "Company"), on behalf of the Portfolio to waive a portion of its management fee or reimburse other expenses (including class-specific shareholder servicing fees) to limit expenses of the Portfolio (excluding taxes, brokerage expenses, dividend expenses on short securities and extraordinary expenses) to 1.30% and 1.00% of average daily net assets for Investment Class Shares and Institutional Class Shares, respectively. This agreement to limit expenses continues through at least April 30, 2024 or upon the termination of the Advisory Agreement. To the extent that the Portfolio's expenses are less than the expense limitation, Wilshire may recoup the amount of any management fee waived/expenses reimbursed within three years from the date on which it waived its fees or reimbursed expenses if the recoupment does not exceed the existing expense limitation as well as the expense limitation that was in place at the time of the fee waiver/expense reimbursement.

Example: This example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Portfolio's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Investment Class	\$131	\$409	\$708	\$1,556
Institutional Class	\$102	\$323	\$561	\$1,246

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Portfolio shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Portfolio’s performance. For the fiscal year ended December 31, 2022, the Portfolio’s portfolio turnover rate was 38% of the average value of its portfolio.

Principal Investment Strategies

The Portfolio invests under normal circumstances, at least 80% of its net assets in the common stock of companies with larger market capitalizations-within the market capitalization range of the Russell 1000[®] Index (as of December 31, 2022, this range was between approximately \$652.98 million and \$2.07 trillion). The market capitalization range of the Russell 1000[®] Index is subject to change.

The Portfolio engages in leverage by investing in Russell 1000 Value Index derivatives, the notional value of which equals approximately 20% of the Portfolio’s net assets. The Portfolio’s derivatives exposure is backed by a portfolio of fixed income securities representing approximately 20% of the Portfolio’s net assets. A Russell 1000 Value Index derivative is a derivative contract, typically a swap agreement, that uses the Russell 1000 Value Index as its reference asset. The portion of the Portfolio invested in Russell 1000 Value Index derivatives seeks to track the daily performance of the Russell 1000 Value Index (the “Swaps Strategy”) and invests in such derivatives in addition to or in place of companies within the Russell 1000 Value Index. In addition to swaps, the Portfolio may invest in other types of derivatives including options, futures, options on futures, and other similar instruments. For purposes of the Portfolio’s 80% test, Russell 1000 Value Index derivatives will be counted as common stocks of companies with larger market capitalizations and will be valued at notional value rather than market value.

Fixed income securities held by the Portfolio may include bonds, debt securities, asset-backed and mortgage-backed securities and other similar instruments. The fixed income securities are typically expected to have a duration that does not exceed one year. The Portfolio may invest in below investment grade debt securities, commonly known as “high-yield” securities or “junk bonds.”

The Portfolio may invest a portion of its assets in equity securities of foreign companies traded in the U.S. or locally on foreign exchanges, including American Depositary Receipts (“ADRs”) and Global Depositary Receipts (“GDRs”).

The Portfolio uses a multi-manager strategy where Wilshire and multiple subadvisers employ different strategies with respect to separate portions of the Portfolio in order to achieve the Portfolio’s investment objective. Wilshire typically allocates the Portfolio’s assets among the Portfolio’s subadvisers in accordance with its outlook for the economy and the financial markets. Each of Los Angeles Capital Management LLC (“Los Angeles Capital”), Hotchkis & Wiley Capital Management, LLC (“Hotchkis & Wiley”), Massachusetts Financial Services Company (d/b/a MFS Investment Management) (“MFS”), and Voya Investment Management Co LLC (“Voya”) manage a portion of the Portfolio and Wilshire manages the Portfolio’s Swaps Strategy.

Los Angeles Capital employs a quantitative investment process for security selection and risk management. Los Angeles Capital utilizes its proprietary Dynamic Alpha Stock Selection Model[®] to build equity portfolios that adapt to market conditions. The model considers a range of valuation, earnings and management characteristics to identify current drivers of return.

MFS focuses on investing its portion of the Portfolio in the stocks of companies that it believes are undervalued compared to their intrinsic value. MFS focuses on companies it believes have intrinsic value greater than the perceived value by the marketplace (e.g., companies with cash flow in excess of their capital expenditures, conservative balance sheets, sustainable competitive advantages, high returns on capital, or the ability to weather economic downturns). MFS may invest its portion of the Portfolio in foreign securities. MFS normally invests its portion of the Portfolio across different industries and sectors, but MFS may invest a significant percentage of its portion of the Portfolio in issuers in a single industry or sector. MFS uses an active bottom-up investment approach to buying and selling investments for its portion of the Portfolio. Investments are selected primarily based on fundamental analysis of individual issuers. Quantitative screening tools that systematically evaluate issuers may also be considered.

In managing its portion of the Portfolio, Hotchkis & Wiley seeks to invest in stocks whose future prospects are misunderstood or not fully recognized by the market. Hotchkis & Wiley employs a fundamental value investing approach which seeks to exploit market inefficiencies created by irrational investor behavior. To identify these investment opportunities, Hotchkis & Wiley employs a disciplined, “bottom-up” investment process based on a proprietary model that is augmented with internally-generated fundamental research. Hotchkis & Wiley seeks broad diversified exposure to these investment opportunities by holding approximately 50-80 portfolio securities. With the exception of diversification guidelines, Hotchkis & Wiley does not

employ pre-determined rules for sales; rather, Hotchkis & Wiley evaluates each sell candidate based on the candidate's specific risk and return characteristics which include: 1) relative valuation; 2) fundamental operating trends; 3) deterioration of fundamentals; and 4) diversification guidelines.

In managing its portion of the Portfolio, Voya focuses on managing a broad array of fixed income investment opportunities, including but not limited to U.S. government securities, securities of foreign governments, and supranational organizations; bank loans; notes that can invest in securities with any credit rating; mortgage-backed, asset-backed debt securities and other structured credit securities, commercial paper and debt securities of foreign issuers, including emerging market countries. In addition, Voya may also invest in its affiliated registered investment companies.

The Portfolio may appeal to you if:

- you are a long-term investor;
- you seek growth of capital;
- you believe that the market will favor a particular investment style, such as large cap value stocks, over other investment styles in the long term and you want a more focused exposure to that investment style; or
- you own other funds or stocks which provide exposure to some but not all investment styles and would like a more complete exposure to the equity market.

Principal Risks

You may lose money by investing in the Portfolio. In addition, investing in the Portfolio involves the following principal risks:

Market Risk. The Portfolio may incur losses due to declines in the value of one or more securities in which it invests. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, including conditions affecting the general economy; political, social, or economic instability at the local, regional, or global level; the spread of infectious illness or other public health issues in one or more countries or regions; geopolitical conflicts, including the war between Russia and Ukraine; and currency and interest rate fluctuations. There is also the possibility that the price of a security will fall because the market perceives that there is or will be a deterioration in the fundamental value of the issuer or poor earnings performance by the issuer. Market risk may affect a single security, company, industry, sector, or the entire market.

Equity Securities Risk. Equity securities are susceptible to general stock market fluctuations and to volatile increases and decreases in value. Equity securities may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors affecting a particular company or industry or the securities markets generally. Because certain types of equity securities, such as common stocks, are generally subordinate to preferred stocks in a company's capital structure, in a company liquidation, the claims of secured and unsecured creditors and owners of bonds and preferred stocks take precedence over the claims of common stock shareholders.

Large-Cap Company Risk. Investments in larger, more established companies may involve risks associated with their larger size. For instance, larger, more established companies may be less able to respond quickly to new competitive challenges, such as changes in consumer tastes or innovation from smaller competitors. Also, larger companies are sometimes less able to attain the high growth rates of successful, smaller companies, especially during extended periods of economic expansion.

Style Risk. The Portfolio's value style may perform poorly or fall out of favor with investors. For example, at times the market may favor small capitalization stocks over large capitalization stocks, growth stocks over value stocks, or vice versa.

Asset Allocation Risk. Although asset allocation among different asset categories and investment strategies generally reduces risk and exposure to any one category or strategy, the risk remains that a subadviser may favor an asset category or investment strategy that performs poorly relative to other asset categories and investment strategies.

Derivatives Risk. The use of derivatives, including forwards, swaps, futures, options and currency transactions, may expose the Portfolio to risks in addition to and greater than those associated with investing directly in the securities underlying those derivatives, including risks relating to leverage, imperfect correlations with underlying investments or the Portfolio's other portfolio holdings, high price volatility, lack of availability, counterparty credit, liquidity, segregation, valuation and legal restrictions. If the Adviser or a subadviser is incorrect about its expectations of market conditions, the use of derivatives could also result in a loss, which in some cases may be unlimited. Use of derivatives may also cause the Portfolio to be subject to additional regulations, which may generate additional Portfolio expenses. These practices also entail transactional expenses and may cause the Portfolio to realize higher amounts of short-term capital gains than if the Portfolio had not engaged in such transactions.

Leverage Risk. The use of derivatives, repurchase agreements, reverse repurchase agreements, unfunded commitments, tender option bonds and borrowings (typically lines of credit) may create leveraging risk. For example, because of the low margin deposit required, futures trading involves an extremely high degree of leverage. As a result, a relatively small price movement in an underlying reference instrument may result in an immediate and substantial impact on a fund's NAV. Leveraging may cause the Portfolio's performance to be more volatile than if it had not been leveraged. To mitigate leveraging risk and otherwise comply with regulatory requirements, the Portfolio must segregate or earmark liquid assets to meet its obligations under, or otherwise cover, the transactions that may give rise to this risk, including, but not limited to, futures, certain options, swaps and reverse repurchase agreements. Applicable law limits a fund from borrowing in an amount greater than 33 ⅓% of its assets.

Fixed-Income Securities Risk. Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. The Federal Reserve has recently begun to raise the federal funds rate which may impact the value of fixed-income securities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may occur quickly and without advance warning following sudden market downturns or unexpected developments involving an issuer, and which may adversely affect the liquidity and value of the security.

High-Yield Bond Risk. Lower-quality bonds, known as "high-yield" or "junk" bonds, present greater risk than bonds of higher quality, including an increased risk of default. An economic downturn or period of rising interest rates could adversely affect the market for these bonds and reduce the Portfolio's ability to sell its bonds. The lack of a liquid market for these bonds could decrease the Portfolio's share price.

Sector Risk. If the Portfolio invests significantly in one or more sectors, market and economic factors affecting those sectors will have a significant effect on the value of the Portfolio's investments in that sector, which can increase the volatility of the Portfolio's performance.

Active Management Risk. The Portfolio is subject to active management risk, the risk that the investment techniques and risk analyses applied by the Portfolio's subadvisers will not produce the desired results and that legislative, regulatory, or tax developments may affect the investment techniques available to the managers in connection with managing the Portfolio. Active trading that can accompany active management will increase the expenses of the Portfolio because of brokerage charges, spreads or mark-up charges, which may lower the Portfolio's performance.

Asset-Backed and Mortgage Backed Securities Risk. Investors in asset-backed securities (ABS), including mortgage-backed securities (MBS) and structured finance investments, generally receive payments that are part interest and part return of principal. These payments may vary based on the rate at which the underlying borrowers pay off their loans or other future expected receivables of assets or cash flows. Some ABS, including MBS, may have structures that make their reaction to interest rates and other factors difficult to predict, making them subject to liquidity risk.

Other Investment Companies Risk. Investing in other investment vehicles, including registered investment companies managed by a subadviser or an affiliate of a subadviser, unaffiliated registered investment companies, closed-end funds and exchange-traded funds (ETFs), subjects the Portfolio to those risks affecting the investment vehicle, including the possibility that the value of the underlying securities held by the investment vehicle could decrease. Moreover, the Portfolio will incur its pro rata share of the underlying vehicles' expenses.

Multi-Managed Fund Risk. The Portfolio is a multi-managed fund with multiple subadvisers who employ different strategies. As a result, the Portfolio may have to buy and sell transactions in the same security on the same day.

Affiliated Funds and Other Significant Investors Risk. Certain Wilshire funds are permitted to invest in the Portfolio. In addition, the Portfolio may be an investment option for unaffiliated mutual funds and other investors with substantial investments in the Portfolio. As a result, the Portfolio may have large inflows or outflows of cash from time to time. This could have adverse effects on the Portfolio's performance if the Portfolio were required to sell securities or invest cash at times when it otherwise would not do so. This activity could also accelerate the realization of capital gains and increase the Portfolio's transaction costs.

Past Performance

The bar chart and the performance table below provide an indication of the risks of investing in the Portfolio by showing how the investment performance of the Investment Class Shares has varied from year to year and by showing how the Portfolio's average annual total returns compare to those of a broad measure of market performance. The chart and table assume reinvestment of dividends and distributions. The Portfolio's past investment performance (before and after taxes) does not necessarily indicate how it will perform in the future. For more recent performance figures, go to <http://wilshire.com> (the website does not form a part of this prospectus) or call 1-866-591-1568.

On July 21, 2020, the Portfolio's investment strategy was changed. Consequently, prior period performance may have been different if the new investment strategy had been in effect during these periods.

Calendar Year Returns

During the periods shown in the bar chart, the highest return for a quarter was 21.04% (quarter ended December 31, 2020) and the lowest return for a quarter was -31.03% (quarter ended March 31, 2020).

The returns for the Portfolio's Investment Class shares were lower than the Institutional Class Shares because Investment Class Shares pay distribution (12b-1) fees.

Average Annual Total Returns (periods ended December 31, 2022)

	1 year	5 years	10 years
Investment Class			
Return Before Taxes	(11.46%)	3.82%	8.65%
Return After Taxes on Distributions	(13.60%)	2.06%	6.67%
Return After Taxes on Distributions and Sale of Shares	(5.36%) ⁽¹⁾	2.87% ⁽¹⁾	6.64%
Institutional Class			
Return Before Taxes	(11.97%)	4.11%	8.92%
Russell 1000® Value Total Return Index (reflects no deduction for fees, expenses or taxes)	(7.54%)	6.67%	10.29%

⁽¹⁾ In certain cases, the figure representing "Return After Taxes on Distributions and Sale of Shares" may be higher than the other return figures of the same period. A higher after-tax return results when a capital loss occurs upon redemption and provides an assumed tax deduction that benefits the investor.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates for each year in the period and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. The after-tax returns shown are not relevant to investors who are tax exempt or hold their Portfolio shares through tax-advantaged arrangements such as 401(k) plans or individual retirement accounts.

After-tax returns are shown for only Investment Class Shares. After-tax returns for Institutional Class Shares will vary.

Management

Adviser

Wilshire Advisors LLC

Nathan Palmer, CFA, Managing Director and Portfolio Manager of Wilshire, serves as a Portfolio Manager for the Portfolio. He has served as Portfolio Manager since July 2020.

Anthony Wicklund, CFA, CAIA, Managing Director and Portfolio Manager of Wilshire, serves as a portfolio manager for the Portfolio. He has served as Portfolio Manager since July 2020.

Josh Emanuel, CFA, Managing Director and Chief Investment Officer of Wilshire Advisors LLC, serves as portfolio manager for the Portfolio. He has served as Portfolio Manager since July 2020.

Suehyun Kim, Vice President and Portfolio Manager of Wilshire, serves as a portfolio manager for the Portfolio. She has served as Portfolio Manager since July 2020.

Subadvisers and Portfolio Managers

Los Angeles Capital

Thomas D. Stevens, CFA, Chairman and Senior Portfolio Manager of Los Angeles Capital and Portfolio Manager of the Portfolio. Mr. Stevens has served as Portfolio Manager since April 2013.

Hal W. Reynolds, CFA, Co-Chief Investment Officer of Los Angeles Capital and Portfolio Manager of the Portfolio. Mr. Reynolds has served as Portfolio Manager since April 2013.

Daniel E. Allen, CFA, President, CEO, and Senior Portfolio Manager of Los Angeles Capital and Portfolio Manager of the Portfolio. Mr. Allen has served as Portfolio Manager since April 2013.

Daniel Arche, CFA, Managing Director and Senior Portfolio Manager of Los Angeles Capital and Portfolio Manager of the Portfolio. Mr. Arche has served as Portfolio Manager since April 2021.

MFS

Benjamin Stone, Investment Officer of MFS and Portfolio Manager of the Portfolio. Mr. Stone has served as Portfolio Manager since January 2021.

Timothy W. Dittmer, Investment Officer of MFS and Portfolio Manager of the Portfolio. Mr. Dittmer has served as Portfolio Manager since January 2021.

Hotchkis & Wiley

George Davis, Jr. is Executive Chairman and a Portfolio Manager on various of Hotchkis & Wiley's portfolio manager teams and is a Portfolio Manager of the Portfolio. Mr. Davis has been with Hotchkis & Wiley since 1988 and has served as a Portfolio Manager of the Portfolio since December 2021.

Scott McBride, CFA, is Chief Executive Officer and a Portfolio Manager on various of Hotchkis & Wiley's portfolio manager teams and is a Portfolio Manager of the Portfolio. Mr. McBride has been with Hotchkis & Wiley since 2001 and has served as a Portfolio Manager of the Portfolio since December 2021.

Judd Peters, CFA, is a Portfolio Manager on various of Hotchkis & Wiley's portfolio manager teams and is a Portfolio Manager of the Portfolio. Mr. Peters has been with Hotchkis & Wiley since 2003 and has served as a Portfolio Manager of the Portfolio since December 2021.

Voya

Matthew Toms, CFA, Chief Investment Officer of fixed income of Voya and Portfolio Manager of the Portfolio. Mr. Toms has served as Portfolio Manager since July 2020.

Sean Banai, CFA, Head of portfolio management for the fixed income platform of Voya and Portfolio Manager of the Portfolio. Mr. Banai has served as Portfolio Manager since July 2020.

Brian Timberlake, Ph.D., CFA, Head of Fixed Income Research of Voya and Portfolio Manager of the Portfolio. Mr. Timberlake has served as Portfolio Manager since July 2020.

Purchase and Sale of Fund Shares

Minimum Initial Investments

The minimum initial investments in the Portfolio are as follows:

Investment Class Shares. The minimum initial investment in the Portfolio is \$2,500 or \$1,000 if you are a client of a securities dealer, bank or other financial institution which has made an aggregate minimum initial purchase for its customers of at least \$2,500. Subsequent investments for the Portfolio must be at least \$100. The minimum investments do not apply to certain employee benefit plans.

Institutional Class Shares. The minimum initial investment is \$250,000 for the Portfolio. Subsequent investments must be at least \$100,000.

To Redeem Shares

You may sell your shares back to the Portfolio (known as redeeming shares) on any business day by telephone or mail.

Tax Information

The Portfolio's distributions are generally taxable to you as ordinary income or capital gains, except when your investment is in an IRA, 401(k) or other tax-advantaged investment plan. Any withdrawals you make from such tax-advantaged investment plans, however, may be taxable to you.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Portfolio through a broker-dealer or other financial intermediary (such as a bank), the Portfolio and its related companies may pay the intermediary for the sale of Portfolio shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Portfolio over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
