ENJIN

Ecosystem Report

Oscar Franklin Tan
Chief Financial Officer & Chief Legal Officer
May 2022

Highlights

- Efinity became the first NFT Polkadot parachain, with 7,695,377 DOT contributed to its crowdloan from approx. 21,000 wallets. This showed strong community support, particularly from existing Enjin adopter communities.

- Efinity launched mainnet in March 2022. Initial NFT-specific features include managed wallets and server-side wallets.

- Wallets holding EFI ERC20 tokens increased approximately 67% to 20,135, from September 2021 to May 6, 2022, according to Etherscan. This excludes EFI substrate tokens.

- Enjin Wallet 2.0 will launch in mid-2022. Enjin Wallet's first major upgrade will feature access to DeFi and trading; support for new tokens, chains, and NFTs; support for the Polkadot and Kusama ecosystem; and more.

- NFT.io, a reward and community driven NFT marketplace, will launch in 2022 and be integrated with Enjin Wallet 2.0.

Efinity Polkadot Crowdloan

Efinity: Decisive winner of Batch 2 auctions

- Efinity became the first NFT parachain and 6th Polkadot parachain on December 30, 2021.
- 7,695,377.45 DOT was contributed to the crowdloan from approx. 21,000 wallets.
- Efinity maintained a decisive lead, winning 100% of auction blocks.
- Efinity won with almost double the DOT of the next bidder (approx. 7.7M DOT versus 4.2M DOT).
- Efinity joined pioneer Polkadot projects Acala, Moonbeam, Astar and Parallel Finance.

Strong crowdloan support from existing Enjin communities

- 72% of contributions below 50 DOT
- 98% of contributions below 1,000 DOT
- Lively social media support during crowdloan

  Supported by contribution channels Parallel Finance, Bifrost, and Equilibrium
- Supported by exchanges Kraken, Binance, Huobi, OKX, KuCoin, Gate.io, MEXC, and AscendEX

Hololoot @hololoot · Jan 1

🐓 Crack out the good stuff, we're celebrating! 🍾 @efinityio just won the auction for Parachain #6! 🥳

This is MASSIVE news - congratulations to the team! ❤️ We're looking forward to bringing NFTs and the metaverse to the Polkadot ecosystem together ✨

Token Gamer @TokenGamerNews · Dec 31, 2021

This is a big moment for @enjin, but to understand why, you need to understand what's going on. In this article, we unpack why @efinityio winning a parachain slot on @Polkadot is Enjin evolving.

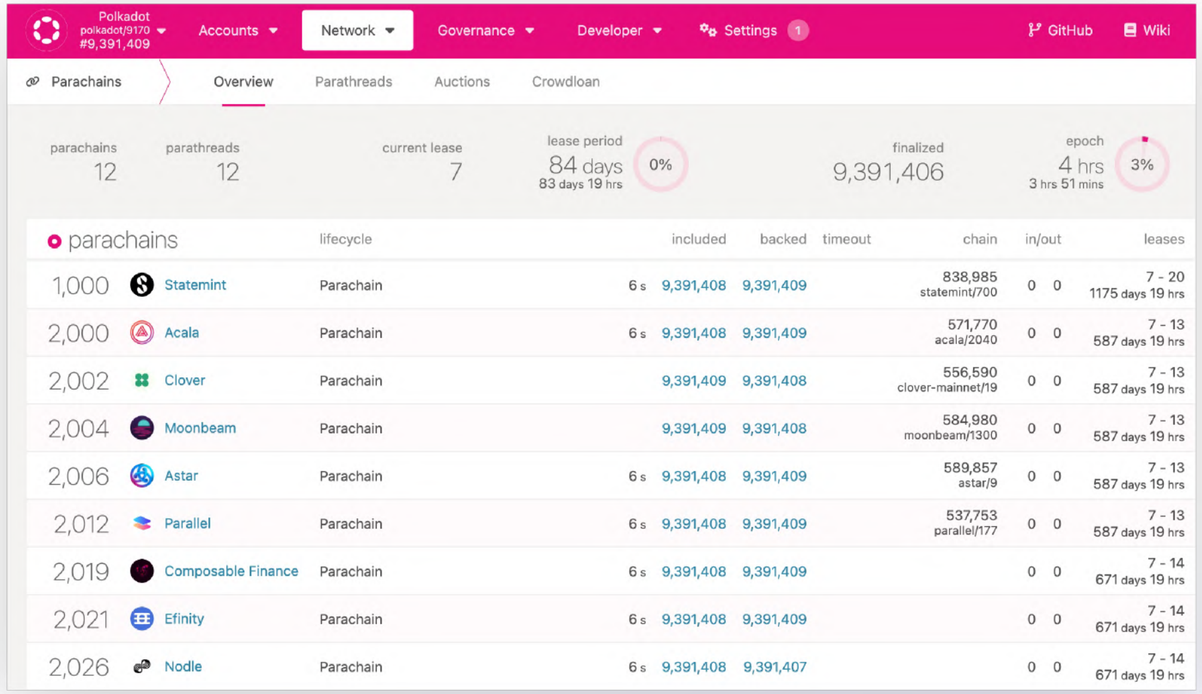
Interview with James Wo, founder and CEO of Digital Finance Group (DFG), at start of crowdloan

Crowdloan rewards increase EFI token decentralization

- Approx. **21,000 wallets** contributed **7,695,377.450 DOT**.
- EFI substrate tokens distributed as crowdloan rewards will substantially increase EFI token decentralization.
- 200 million EFI tokens (10% of total supply) will be distributed to contributors in proportion to DOT contributed.
- EFI rewards will be distributed linearly throughout the 96 weeks parachain lease period, and will begin to accrue on March 11, 2022 (the beginning of the lease).
- Outside the crowdloan, select Enjin adopters will begin receiving EFI substrate tokens to allow testing on mainnet.
- Later, governance structures will allow EFI token grants from Efinity's community pool.
- Separately, 20,135 wallets held held EFI ERC20 tokens, according to Etherscan on May 6, 2022.



Crowdloan launched with strong educational campaign

- The Enjin team launched a strong educational campaign, such as teaching users how to use Polkadot wallets and other channels to contribute DOT.
- The Enjin team and other influencers educated the community on Efinity as the "infrastructure of the Metaverse" and its features specifically designed for NFT transfers. They also emphasized Polkadot's shared security, interoperability and customizability.
- The crowdloan successfully tapped various Enjin adopter communities, effectively giving Efinity the largest existing community before the crowdloans.
- The crowdloan also benefitted from the Enjin team's existing track record of NFT development. Enjin co-founder Witek Radomski authored the ERC-1155 standard for NFTs.

Efinity Mainnet Launch

Efinity Mainnet launched on March 2022

Efinity's mainnet launched on Polkadot last March 11, 2022, the beginning of its parachain lease period. As of May 2022, initial mainnet functionallity includes:

- NFT minting
- Sending and receiving EFI tokens
- Managed wallets (an evolution of discrete accounts)
- Server-side wallet for game developers

Mainnet upgrades will include whitepaper features including:

- Fuel tanks
- Collator nodes and payments to collators from collator pool
- Collator node payments and governance rewards requiring Enjin Coin staking

Efinity: Mainnet Launch

MANAGED WALLETS

Efinity allows a developer to create wallets, place NFTs inside, and transfer these to users. This greatly reduces friction and the steps a mainstream user needs to try a new NFT game or app. These "managed wallets" are an evolution of Efinity's discrete accounts.

SERVER-SIDE WALLET FOR GAME DEVELOPERS

Efinity allows developers to run a "server side wallet" on their own cloud and internal servers. This gives developers more control over wallet data and encourages use by larger AA and AAA game developers. This is an evolution of how the Enjin Wallet integrates into games and allows developers to easily integrate NFT functionality into games and other apps.

DISCRETE ACCOUNTS

There is friction in NFT adoption because mainstream users need to be encouraged to create blockchain wallets in order to use NFTs. Efinity allows "discrete accounts," where a developer can place NFTs at an address beforehand and encourages the user to create a wallet to claim the address and claim the NFTs.

FUEL TANKS

Efinity will allow developers to pay for and subsidize users' NFT transfers. This makes gas invisible to users and removes friction for mainstream users.

Adopter Feature

MyMetaverse Collator

My Meta Studio, an independent company, created its own Efinity collator node and will aim to connect to Efinity. My Meta Studio was founded by former Enjin VP Marketing Simon Kertonegoro, and thus part of Enjin's NFT movement since its inception in 2017.

The MyMetaverse Collator commits to 100% uptime and to be carbon-neutral with carbon-sink NFTs. It also commits to use transaction fees earned by the collator within the Enjin and Efinity ecosystems.

My Meta Studio is a game development company that specializes in building creator-led metaverses with NFT mechanics. They've recently launched the Grand Theft Auto (GTA) RP server NFT integration

Efinity x Acala:
First planned integration across parachains

- Efinity aims to be the first parachain to integrate with Acala.
- The immediate goal is to allow ready transfer of EFI tokens to Acala, making EFI much more accessible within the Polkadot ecosystem.
- The vision is the free transfer of tokens to and from Acala and Efinity, and the use of Acala tokens such as the aUSD stablecoin with EFI.
- Polkadot was designed for interoperability and shared security. It aims to provide greater security from the relay chain for transfers across parachains (such as Acala and Efinity) than bridges linking typical blockchains. Polkadot removes the need to secure bridges in addition to the actual blockchains.
- Efinity supports the US$250M Acala aUSD ecosystem fund.

"At Acala, we are always looking to work with top engineering teams. We couldn't be happier to welcome Efinity to Polkadot, with their strong team and vibrant ecosystem. We look forward to building many integrations together across both parachains to improve user experience and bring new capabilities to users."

– Dan Reecer, Chief Growth Officer at Acala

NFT.io and Enjin Wallet 2.0

Community Driven Marketplace

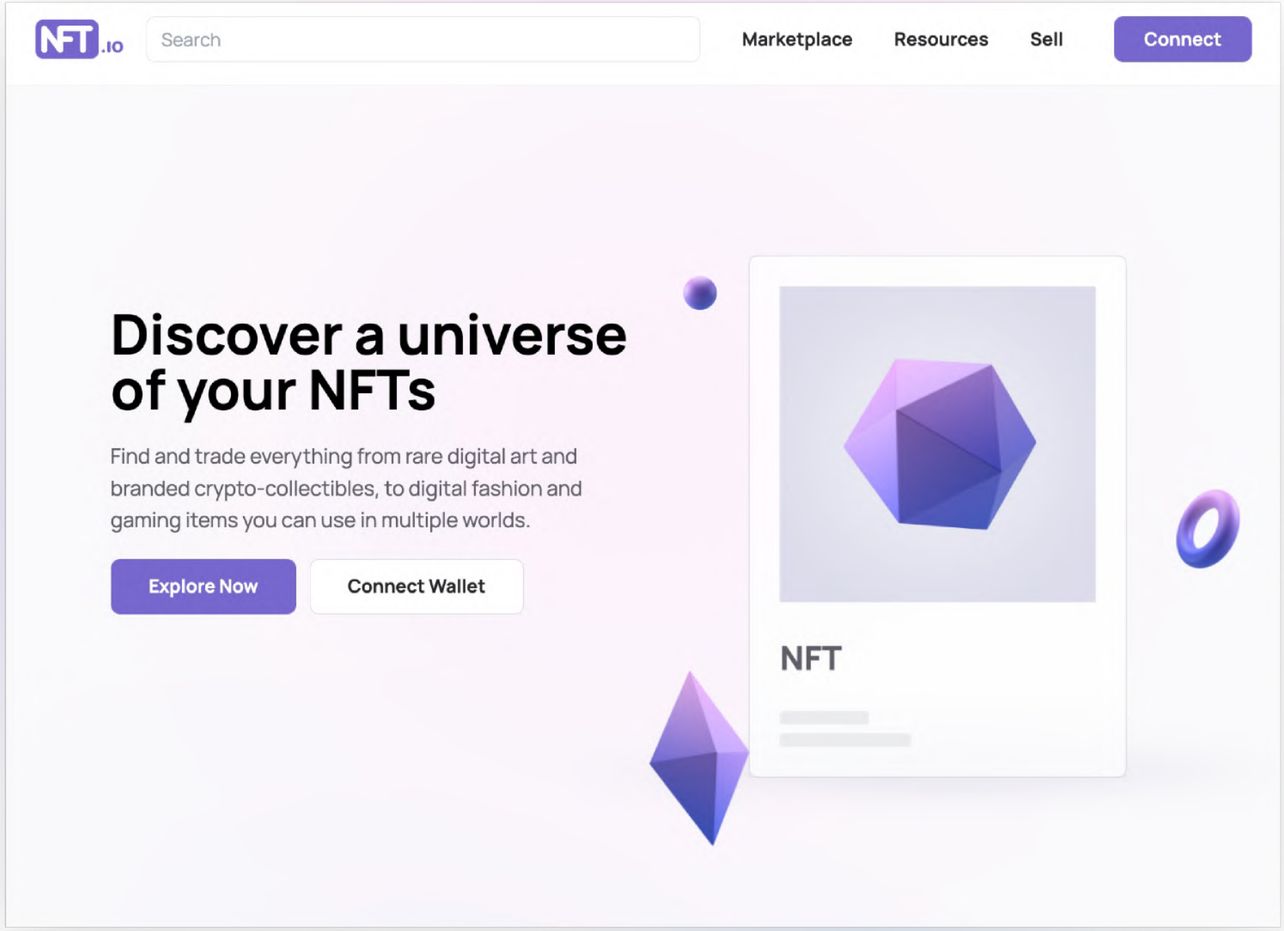
NFT.io will launch in 2022 to anchor the Enjin ecosystem. An Efinity reward and community driven NFT marketplace, NFT.io will be integrated with Enjin Wallet 2.0 and allow anyone to tokenize and sell their digital creations.

NFT.io

Currently in closed beta testing for internal partners and game adopters

Completed internal testing party for patching and pre-deployment, wallet connections, marketplace, tags, search filtering, activity, auctions, and other features

Currently in staging and closed beta development for generic ERC-721 and ERC-1155, with support for Efinity



NFT.io: Features that make NFT trading easy

NFT.io will give individuals and companies a place to easily convert their digital goods to NFTs and sell and purchase in a global marketplace.

Buy & Sell

Users will be able to buy and sell digital goods, including ERC-721s and ERC-1155s.

Auctions & Bidding

Users can list their NFTs for a fixed price, or hold auctions and receive bids.

Rewards (EFI)

Supporting creators and attracting the wider ecosystem with Efinity rewards as a core feature of the NFT.io marketplace.

1.67M

Wallet downloads as of April 2022

increased from 717K as of September 2021 and 1.19M as of December 2021

4.5 rating on Google Play Store

4.4 rating on Apple App Store

Enjin Wallet 2.0 : Efinity Integration

Enjin Wallet 2.0 features a revamped native app design, code, and wallet API. The updated app boasts features like unlimited wallets, portfolio view, collectibles, sending and receiving assets, and access to exchanges in Pancakeswap and other DApps browsers. The Enjin Wallet 2.0 upgrade is completely backward-compatible with Enjin Wallet 1.0.

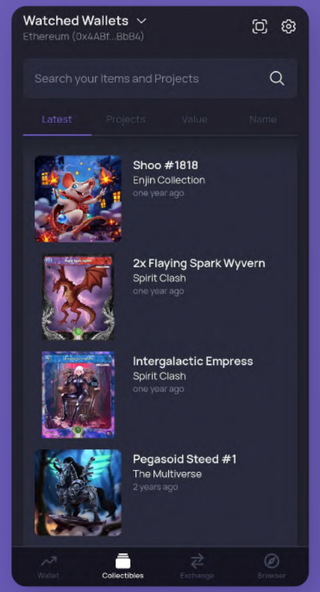
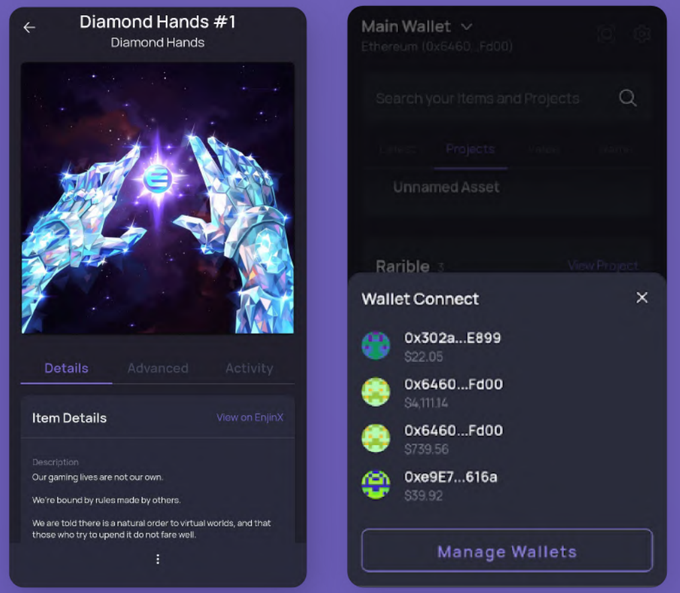
BSC Blockchain Support



ERC721 NFT Support



WalletConnect Support

Enjin Wallet v2.0: Long-Awaited Features

We reviewed feedback from the Enjin community and benchmarked against other wallets, We are adding Night Mode, BEP20 (BSC) blockchain support, ERC-721 NFT support, and WalletConnect—among other features.

Adopter Feature

BlockTrucks and Enjin Wallet Integration

BlockTrucks is a NFT offroad multiplayer racing game which will use Efinity and uses the Enjin Wallet to store NFT trucks. With Efinity, BlockTrucks aims to ensure that its in-game NFTs will be portable cross-chain and interoperable with other platforms.

The game features four tough racing conditions ranging from sand, mud, and snow to the Ramp Series tarmac events. BlockTrucks states it has fine tuned its semi-realistic physics racing engine over many years of development.

BlockTrucks has launched presales of its first NFTs trucks and stadiums.

Enjin Will Power Polkadot's NFT Marketplace with Efinity

"If you think about Steve Jobs and what he was trying to do in the early days of Apple when everybody else was pointing the other direction in terms of operating systems, this is what I think Enjin is doing, they continue to strive, develop and even win this [parachain slot]."

Events

NFT AWARDS 2021

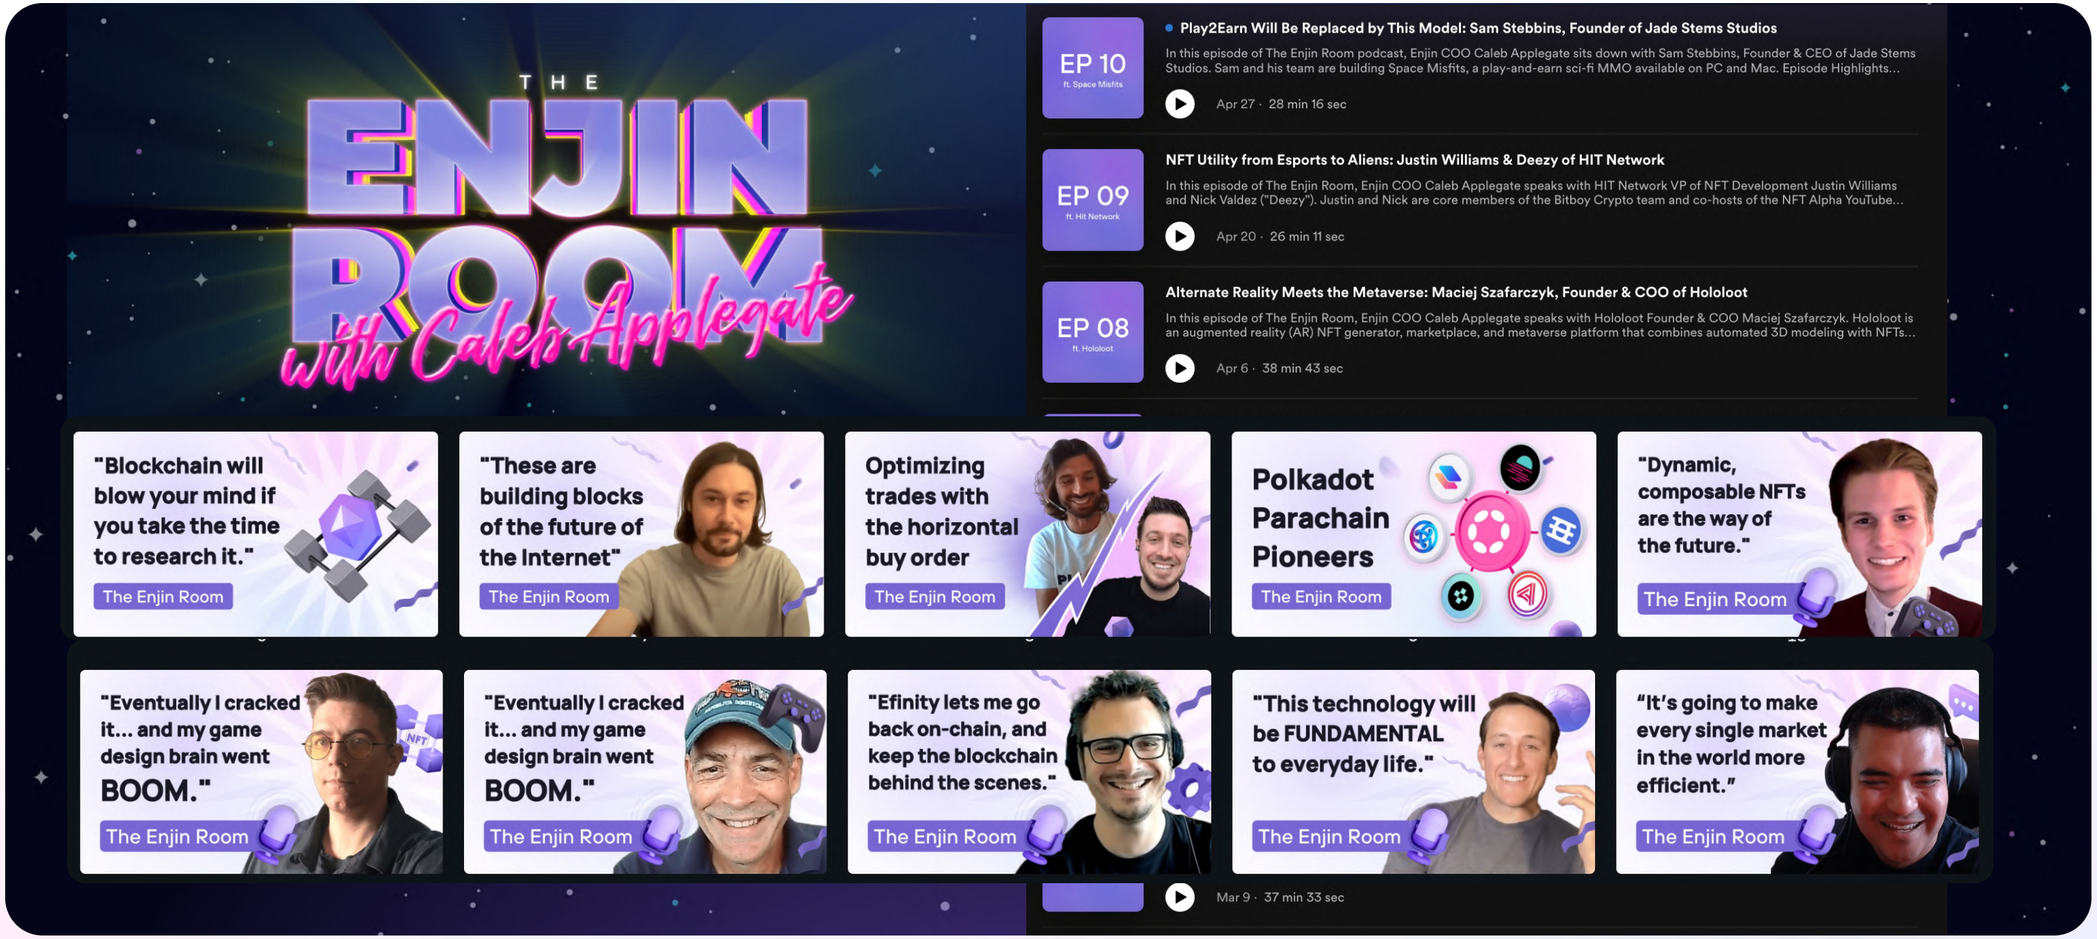
Hosted and founded the 2nd Annual NFT Awards featuring leaders from the tech, gaming, and blockchain industries recognizing and promoting the best, most innovative NFT projects and the people and organizations who created them.

World Economic Forum 2022

Joining Polkadot's delegation to the World Economic Forum's annual meeting in Davos, Switzerland. The conference brings together thousands of leaders and experts from around the world, all committed to a “Davos Spirit” of improving the state of the world.

The Enjin Room

Hosted by Enjin COO Caleb Applegate, The Enjin Room is a weekly podcast dedicated to engage thought-leaders, innovators and builders in the Metaverse, Blockchain Gaming and Web3.



Sustainability Commitment

There’s a lot of speculation and guessing and even some confusion about the metaverse, but every product team on the planet should be asking now: ‘How can we responsibly participate?‘

– Caleb Applegate, Chief Operating Officer

Sustainability Commitment

In our continued commitment on sustainability, we built Efinity on Polkadot, the blockchain that has the smallest footprint with only 70k kWh/year (more than 250% lower than other blockchains). With Polkadot, Efinity builds the metaverse on an interoperable, secure and customizable platform, and does so sustainably.

Ecosystem Token Purchases

Token Purchase

Gamepad.co

Gamepad.co is a decentralized accelerator platform for metaverse projects. It features a platform that curates and nurtures then accelerates top NFT gaming, guild, and metaverse projects. It has an incubation program, an IDO launchpad, NFT sales platform, and various components to support projects' long term fundamentals and community strength.

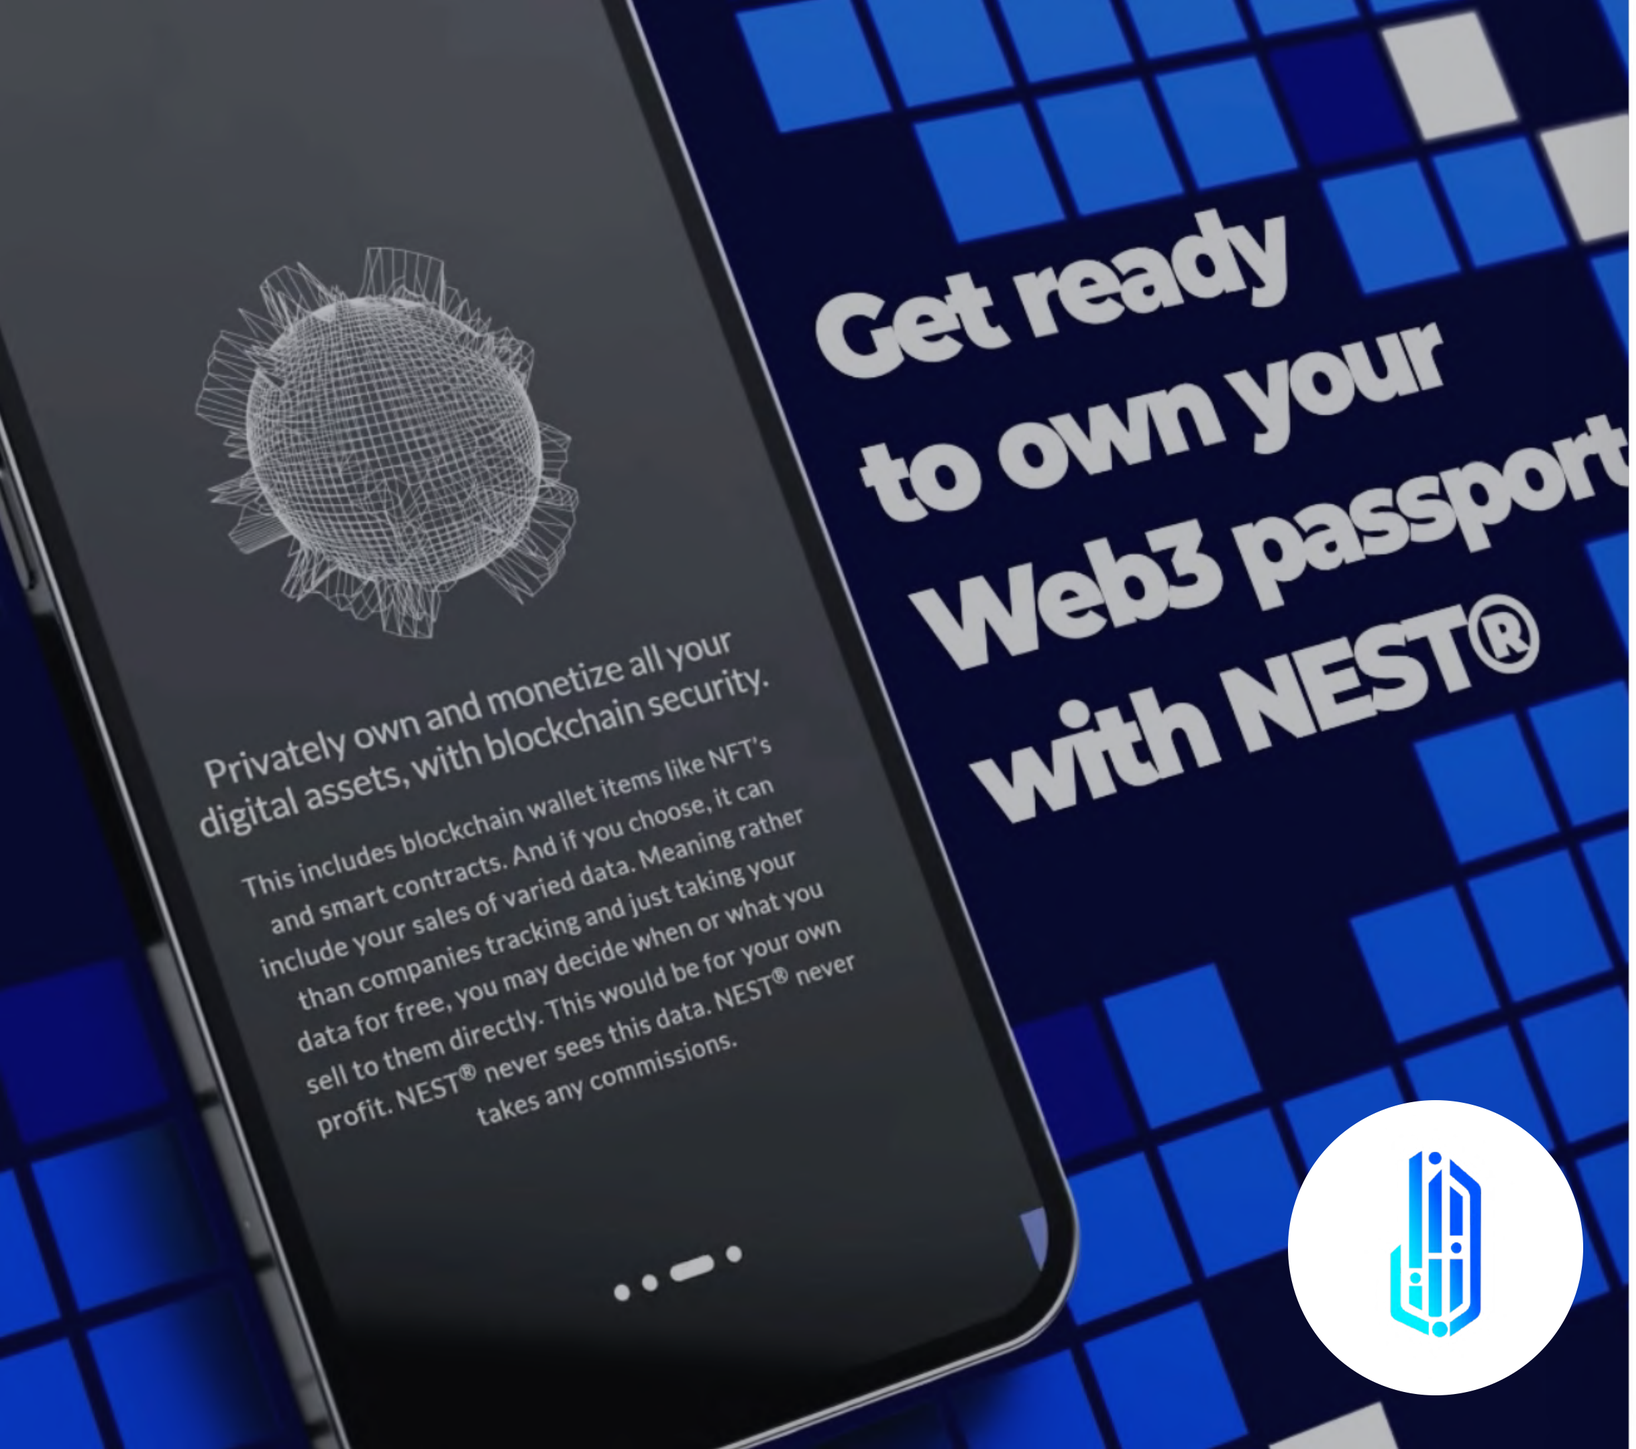
The presale token purchasers were led by Enjin and OKX Blockdream Ventures.

Token Purchase

VR JAM

VRJAM, the UK-based creator of live music experiences in virtual reality, empowers creators, platform owners and brands to effortlessly create inspiring computer graphical content that redefines fan experience by making content beautiful, interactive and immersive. The demand for remote-friendly immersive music content has increased substantially in recent years.

Enjin joined the seed round with Sky Vision Capital, NGC Ventures, AU21 Technology, Valhalla Capital, and EnjFi.



Token Purchase

Nest

Naturally Encrypted, Secure Tech (NEST) is a mobile-first, Web 3.0 passport and direct Distributed Ledger Technology (DLT) service ecosystem filled with click-to-create options that allow users to uniquely secure, own and earn from their digital assets.

The seed round was led by Fenbushi Capital and BridgePort Group including support from Enjin, First Digital Trust, LD Capital, SparkLabs, NVC, Next Chymia, Big Brain Holdings, Serafund, DWeb3, Vespertine, Double Peak, Enzac Research and select family offices.

Adopter Feature

Hololoot

Hololoot is marketed as the world's first augmented reality (AR) NFT generator. It is the first project planning to use Efinity to transfer proprietary AR 3D NFTs through the metaverse.

Hololoot aims to empower users of AR-ready devices to generate their own AR digital assets and mint these as NFTs. It aims to enable them to use and trade AR NFTs using the same app.

Hololoot launched its HOL token generation event (TGE) in December 2021, supported by Enjin and launchpad EnjinStarter. Hololoot released the beta version of its AR NFT marketplace for beta testing in March 2022.
