

SUPPLEMENT PELLET

AIM

GENERADE Optimum (CS) PT

Method

Mix With Hay or Grain

Dose Rate

Cattle: 750 g/h/day | Sheep: 280 g/h/day

Unit Size

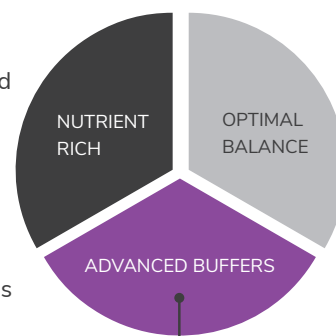

25 Kg or 1,000 Kg Bulk Bag

STRESS MANAGEMENT

For Cattle & Sheep. Ruminants undergoing changes to feed, water, weather or during transport and handling may be at risk of deficiencies in a range of vitamins and minerals. Designed by Australian experts for Australian conditions and to be fed on its own or mixed with supplementary feeds such as hay or grain, Generade Optimum is a convenient, concentrated Vitamin & Mineral Supplement Pellet containing a specific combination of Macro and Micro nutrients important to animals experiencing transition stress.

GENERADE Optimum (CS) PT

A high specification Supplement Pellet designed to deliver key Micro and Macro nutrients to animals experiencing Transition Stress. Can be fed on its own or applied to supplementary feed such as hay or grain.

FAQ'S

When should I use this Pellet? Generade Optimum is designed for use in the lead up to transport, processing, yarding, shearing, or any other event that may cause stress. For best results treat animals at least twice during the 24 to 36 hours prior to the stress event.

How much Generade Optimum should I use? The Pellet is designed to be fed at the rate of 750 grams per cattle per day, or 280 grams per sheep per day, and may be fed on its own or mixed with hay or grain. To optimise the productive benefit, we suggest you speak to an Accredited A.I.M. Advisor.

How do I mix the Pellet with grain? The most effective way to mix the Generade Pellet with grain is via a vertical paddle or ribbon mixer. This will ensure even distribution of the Pellet through the mix. If you don't have a mixer, adding Generade Pellet at a proportional rate to grain as it is being augered can often be quite successful, however care and diligence is required in order to ensure even distribution.

Does Generade Optimum contain products that limit/prevent grain poisoning? Yes. Generade Pellet contains Buffers - compounds that help to control or prevent Acidosis. However due care during Feedlot Induction and Feeding is a critical part of managing the risk associated with Acidosis.

Can I add other additives to the grain ration whilst using Generade Optimum? Yes, but this is usually completely unnecessary and may often reduce the effectiveness of the Pellet by upsetting the nutrient balance it contains. We strongly suggest that you discuss your options with an Accredited A.I.M. Advisor before proceeding with including additional additives to the grain diet.

When mixing Hay with Generade Optimum, what quality of hay should I use? The quality of the hay is not critical, however we suggest that you ensure it is clean, dry and does not contain mould or contaminants.

Composition Nutrient Sources

Inorganic Minerals and/or Mineral Chelates, Vegetable Oil and/or Molasses, Starches and/or Di- and/or Polysaccharides.

Nutrient Profile

Macro Minerals	Calcium, Magnesium, Phosphorous, Potassium, Sodium, Sulphur.
