

SUPPLEMENT PELLET

WEANERMAX Catalyst (S) PT

Method

To Be Mixed With Grain

Dose Rate

Lambs: 140 g / hd / day

Unit Size

25 Kg or 1,000 Kg Bulk Bag

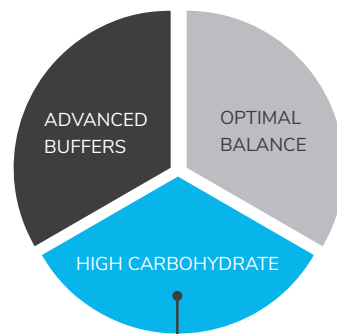

WEANING MANAGEMENT

For Lambs (Only). Freshly weaned animals exposed to diets that are low in nutrients critical to proper growth and health are at risk of poor weight gain, reduced immune response and retarded physiological development. Designed by Australian experts for Australian conditions, Weanermax Catalyst (S) Pellet is a comprehensively formulated blend of Macro & Micro minerals, Vitamins and Carbohydrates specifically engineered to help optimise the supply of those key nutrients to young ruminants in that critical immediate-post-weaning period.

WEANERMAX

Catalyst (S) PT

A medium dose Supplement Pellet containing a rich blend of Vitamins, Micro and Macro Minerals and soluble Carbohydrates for use with young animals in the immediate post weaning period.

FAQ'S

When should I introduce Weanermax Catalyst (S) Pellet? Ideally Weanermax Catalyst (S) Pellet should be used as part of a complete Weaning Program for a period of a minimum 21 days starting on the day of weaning. To facilitate imprinting, it is also important to feed a small quantity (50 grams / Ewe & Lamb / day) to Ewes and Lambs in the 3 to 4 days leading up to weaning.

Can I feed grain with Weanermax Catalyst (S) Pellet? Yes. Weanermax Catalyst (S) Pellet is designed to be used in combination with starchy grains (i.e. corn, wheat or barley) where the total amount of grain fed DOES NOT EXCEED 500 grams per weaner per day.

Does Weanermax Catalyst (S) Pellet contain products that limit or prevent grain poisoning? Yes. Weanermax Catalyst (S) Pellet does contain some compounds which can help to control Acidosis - up to a maximum feeding rate of 500 grams per weaner per day. However due care when feeding any grain is always a critical part of managing the risk associated with Acidosis.

How much Weanermax Catalyst (S) Pellet should I use? Weanermax Catalyst (S) Pellet is designed to be fed at the rate of 140 grams per Lamb per day, or to be included in a Complete Weaning Ration at 280 kilograms per tonne finished ration where that ration is to be fed at 500 grams per Lamb per day. To optimise the productive benefit from the Pellet, we strongly suggest that you speak to an Accredited A.I.M. Advisor.

Can I add other additives to the grain ration whilst using Weanermax Catalyst (S) Pellet? This is usually completely unnecessary and may often reduce the effectiveness of the Pellet by upsetting the total nutrient balance.

Will it matter if I'm already feeding other supplements? It may. If you're using Weanermax Catalyst (S) Pellet we assume you've already spoken to an Accredited A.I.M. Advisor to ascertain its suitability for your application. If you haven't, please contact an Accredited A.I.M. Advisor to discuss.

Composition Nutrient Sources

Vitamins and/or Vitamin Precursors, Inorganic Minerals and/or Mineral Chelates, Vegetable Proteins and/or Amino Acids, Salt, Vegetable Oil and/or Molasses, Starches and/or Di- and/or Polysaccharides.

Nutrient Profile

Macro Minerals	Calcium, Magnesium, Phosphorous, Sodium, Sulphur.
Trace Elements	Cobalt, Copper, Iodine, Manganese, Selenium, Zinc.
Vitamins	Vitamins A, D, E and B Group
Other	Advanced Buffer Complex, Lasalocid Sodium.

Calculated Analysis (M.F.)

Crude Protein	%	8.10
Crude Fat	%	3.50
Carbohydrate	%	32.00
Calcium	%	3.40
Phosphorous	%	1.10
Sodium	%	0.68
Sulphur	%	1.75
Lasalocid Sodium	mg/kg	171
