

Nemesis 600 Series

Perfect for simple museum exhibit, corporate setup, small entertainment venue, and anywhere redundant hosting is limited to a few subsystems.

Overview

ISAAC is a hosting platform that brings sensible IT concepts and technologies within the more conventional Audio Video workflow. Its ability to run multiple applications and operating systems inside the same physical unit creates an incredible opportunity for hardware consolidation and redundancy while favoring efficiency and sustainability. Its embedded software suite lets you effortlessly manage your AV system from one unified interface.

Nemesis 600 Series

The Nemesis 600 Series is based on a cluster configuration providing cost-effective automated hardware redundancy. It allows hardware resources to be utilized more efficiently and for the cluster to simultaneously run different operating systems.

Nemesis 600 Series comes as two 1U rack mount servers and a 2U storage unit offering redundant power supply, raid configured storage, dual storage controller, and out-of-band management controller card on all configurations.

Nemesis 610

Nemesis 610 is perfectly sized to host up to 2 control, AV, or other solutions using virtualization technology. One of the hosted VMs can run in Fault Tolerant mode for mission critical application. As a compact cluster it is ideally suited for simple museum exhibit, corporate setup, small entertainment venue, and anywhere redundant hosting is limited to a few subsystems.

Sustainability

With ISAAC, we are committed to providing more efficiency at all levels. Reducing the amount of physical infrastructure in use leads to savings in technical room floor space and power consumed. In addition, there is a commensurate reduction in cooling system power consumption and other ancillary technical room services that is proportional to the AV system's overall operational efficiency.

Nemesis 600 series and our platform underneath is proof of our dedication to environmental sustainability.
