

Fitting and Sizing

All for one. One for all.

AFO1 Products are designed with an industry first all-sizes-in-one design. The trimmable footplates and calf cuffs are combined with simple height adjustment to comfortably fit most patient demographics.

Footplate Adjustment

Trim to size.

Cut the fiberglass area along the trimlines or trace the user's insole. Trimmable in the toe, heel and arch areas.

Accommodates foot sizes from 8.5 to 12 inches in length.

Vertical Adjustment

Slide. Fasten. Fit.

Slide the calf cuff along the carbon fiber strut to the desired height and fasten in place. Height can be adjusted independently of the footplate to accommodate patients with foot to leg discrepancies.

Fits users with calf heights of 11.25 to 15 inches from the ground.

Technical Specs

FreeFlow

Product Weight
10.1 ounces

Maximum User Weight
275lbs

Packaging
On-the-go box with all fitting tools inside
(except scissors)

Not made with natural rubber latex.
