

Reduce Admin Headaches with Virtual Tenants & Perfect Permissions

Offload up to 30% of IT tasks by delegating Microsoft 365 administration – while maintaining full oversight and consistency.

Does Your Microsoft 365 Environment Fit Your Business Model?

Large organizations are managing complex, often disparate Microsoft 365 environments. Typically, this either means managing everything in one centralized Microsoft 365 tenant – and having to support everything through central IT, or managing many separate tenants and the headaches that separate management brings.

Delegate with Virtual Tenants & Perfect Permissions

What if you could slice and dice a single M365 tenant in almost unlimited ways, empowering local IT specialists or admins to add, manage and support their own users while maintaining control and ensuring compliance?

With CoreSuite, it's all under control

- ✓ **FULL VALUE**
Get more from your Microsoft 365 investment by optimizing licenses and driving adoption across the enterprise.
- ✓ **FULL OVERSIGHT**
Identify and manage security and compliance gaps with real-time visibility into everything from breach attempts to policy violations.
- ✓ **FULL SPEED**
Turn hours (or days) of work into just a few clicks, with a platform that does the heavy lifting on manual, mundane tasks.

With CoreView Virtual Tenants, you can segment your tenant by almost any criteria – from agencies to departments or teams, or even by role or other criteria. Want to put all users with area code 352 into a separate group? With Virtual Tenants you can, and any new users who fit the criteria will be automatically included.

Then, you can assign incredibly granular, specialized “perfect permissions” for each Virtual Tenant to the proper admins. Want to allow a marketing operations person to add new users and assign licenses, but only within his or her department? No problem. Want to enable only managers to create new teams in Microsoft Teams? Virtual Tenants combined with granular role-based access controls create unlimited combinations to support your specific needs.

Jefferson County Library Cooperative was able to empower its 22 separate libraries while centralizing into a single M365 tenant through delegated administration with Virtual Tenants. They went from unhappy libraries that had to wait for support to happy libraries that can handle most requests themselves.

What Would Happen If You Got It All Under Control?

With CoreView, you can delegate administration while maintaining full oversight of your environment, and layer in automation that helps your team move at full speed.

And all those departments or regions you support? Instead of supporting everyone in a single tenant, handling hundreds of requests a day and struggling to keep up, you’ve granted department admins the ability to address requests themselves. This means offloading most requests to local admins, so central IT can focus on the more complex or higher-level issues. And freeing up time to do the more strategic tasks, like monitoring compliance with internal policies and optimizing license usage, supported by readily available reporting and automation to alert you if something unusual occurs.

This is the power of getting it all under control with CoreView.

CoreView cuts the chaos and gets Microsoft 365 under control. The CoreView Microsoft 365 Management Platform helps IT teams get full value from their Microsoft 365 investment, gain full oversight of their environment, and move at full speed. More than 10 million users and the world’s largest organizations rely on CoreView to craft perfect privileges, eliminate wasted licenses, drive adoption, and automate repetitive tasks. A Microsoft Gold Partner, CoreView is Co-Sell Prioritized and available on the Azure Marketplace. CoreView | Now It’s Under Control.
