Teaching at the Right Level: Summary of Interventions

**Summary:** Evaluations of Teaching at the Right Level (TaRL) programs consistently demonstrate substantial impacts on student learning outcomes across varied contexts and through multiple implementation models. TaRL requires a shift of focus away from grade-level curriculum completion to ensure that children are taught from the level at which they are, regardless of their grade in which they are currently enrolled and are allowed to progress at their own pace. This approach is based on the understanding that children in countries like India, are often several grade levels below where they are expected to be. Pratham has used the TaRL approach in India for working with children in grades 3 to 5 to enable them to reach basic reading fluency and the ability to recognize numbers and do basic arithmetic operations. At its core, the approach involves identifying children’s current learning levels, grouping them by level, assigning teachers to different groups after providing them with level appropriate learning materials (as well as training on their use), and monitoring student progress. TaRL has been shown to work through a range of implementation models, such as: through community volunteers either during or outside of school (i.e., remedial pull-out programs and after-school reading camps), and with government teachers within the regular school day or in an out-of-school context (i.e., the integrated classroom model and summer camps). Evidence from TaRL evaluations has contributed to the scale-up of Pratham’s Read India Program in 19 states in India.

<tbody>
<tr>
<td><strong>Balsakhi</strong></td>
<td>2001-2003 Maharashtra and Gujarat (urban, cities of Mumbai and Vadodara)</td>
<td>Paid community instructors</td>
<td>2 hours per day within school, but outside the regular classroom (over the course of the school year)</td>
<td>Language(^i) (Gujarati in Gujarati; Hindi and Marathi in Mumbai), Math Grades II - IV</td>
<td>- Average test scores (overall) increased by 0.14 sd in first year, 0.28 sd in second year. - Children who were sent to the balsakhi gained the most (0.6 sd on overall test score in the second year)</td>
<td>Instruction tailored to a child’s learning level and delivered through community instructors during school is an effective and low-cost way to improve learning outcomes.</td>
</tr>
<tr>
<td><strong>Community-based classes for improving reading and arithmetic</strong>  (^iv)</td>
<td>2005-2006 Uttar Pradesh (rural, Jaunpur district)</td>
<td>Community volunteers (unpaid)</td>
<td>2 hours per day, outside of school hours (2-3 months of the school year)</td>
<td>Reading (Hindi), Math Children aged 7-14, irrespective of grade</td>
<td>- At endline, children in treatment who could not read at baseline were 7.9 percent more likely to read at least letters - At endline those who could read only letters at baseline were 3.3 percent more likely to read stories</td>
<td>The study shows that this pedagogy is effective when used by community volunteers. Results led to the idea that reaching the maximum number of children may require scaling-up via in-school interventions given that attendance at classes was low (less than 1/5(^{iv})) of targeted children attended. In addition, community-based interventions did not lead to any changes in school attendance or better school functioning.</td>
</tr>
<tr>
<td><strong>Read India</strong></td>
<td>2008-2010 Bihar (rural, West Champaran district)</td>
<td>Community volunteers</td>
<td>Around 60 teaching days, outside of school hours (over the course of each school year)</td>
<td>Reading (Hindi), Writing (Hindi), Math Grades I-V</td>
<td>- No overall impact of ‘material only’ and ‘material plus teacher training’ - The intervention with teacher training, materials and volunteers improved overall average test score by 0.11 sd - Improvement on all tests</td>
<td>The only intervention that significantly improved test scores was a combination of teacher training, materials and village volunteers (who taught target children outside of school hours).</td>
</tr>
<tr>
<td><strong>methods and materials to be used during school hours</strong></td>
<td>2008-2010 Uttarakhand(^{xii}) (rural, Dehradun and Haridwar)</td>
<td>Community volunteers</td>
<td>Around 50 teaching days , during school hours (over the course of the school year)</td>
<td>Reading (Hindi), Writing (Hindi), Math Grades I-V</td>
<td>None of the interventions had an impact on average overall score</td>
<td>This model was not effective probably because teachers exerted less effort (and volunteers became substitutes rather than supplements), or volunteers were asked to perform other tasks rather than support teaching. There were also teacher strikes during this time.</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>---</td>
<td>---</td>
<td>---</td>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td><strong>Read India I – Summer camp</strong></td>
<td>As part of the intervention described above, remedial education was provided to children in a one-month summer camp led by government teachers.</td>
<td>2008 Bihar (rural, West Champaran district)</td>
<td>Gov’t teachers and para teachers supported by unpaid community volunteers</td>
<td>3-4 hours a day, 5 days a week, for 1 month (during the summer)</td>
<td>Reading (Hindi), Writing (Hindi), Math, Grades III-V</td>
<td>- Reading score increased by 0.08 sd, Math score by 0.08 sd - Effects on reading concentrated on children at letter-reading level or below at baseline</td>
</tr>
<tr>
<td><strong>Learning Enhancement Programme</strong></td>
<td>Children in Grade 3-5 were re-grouped according to learning level and then taught by trained teachers within the regular school day</td>
<td>2012-13 Haryana (rural, Mahendragarh and Kurukshetra districts)</td>
<td>Gov’t teachers, monitored by Gov’t Assistant Block Resource Coordinators</td>
<td>1 hour per day, within the regular classroom (over the course of the school year)</td>
<td>Reading (Hindi) Grades III-V</td>
<td>- Basic oral Hindi score(^{xxi}) increased by 0.15 sd - Basic written Hindi increased by 0.135sd - No spill-overs from Reading to Math</td>
</tr>
<tr>
<td><strong>Learning Camps</strong></td>
<td>Short-intensive bursts of instructional activity based on children grouped by level. Children taught by Pratham team members and village volunteers.</td>
<td>2013-14 Uttar Pradesh (rural, Sitapur and Unnao districts)</td>
<td>Pratham staff + Village volunteers</td>
<td>3 hours per day within school, but outside the regular classroom. 10 or 20 day camps (50 days total instruction) occurring in 1-2 month intervals.</td>
<td>Reading (Hindi), Math Grades III-V</td>
<td>Both 10 and 20 days programs had a strong effect - Endline Hindi scores: - 10 day: 0.71 SDs higher; 20 day: 0.61 SDs higher - 20 – 22 percentage point increase - Endline Math scores: - 10 day: 0.69 SDs higher; 20 day: 0.61 SDs higher - 17 – 18 percentage point increase Students in the camps moved up roughly 0.9 to 1.3 learning levels</td>

other half did so randomly. Contract and civil-service teachers were randomly assigned to each new class.

points more likely to be in class and teaching when they are assigned to the top section in tracking schools than when they are assigned to non-tracking schools.

1 All results reported in this table are significant at the 10% level and below, and ITT estimates (except for italicized text, which is ToT)

ii ASER Reading and Math tools were used after 2005

iii Since the ASER reading tool did not exist at the time of this evaluation, language includes reading, writing and activities such as choosing the right spelling etc.

iv Treatment 1: facilitating village meetings, discussions, information gathering; Treatment 2: Treatment 1 + training community members to test children on reading and math and create ‘report cards’ on enrolment status and learning in the village; Treatment 3: Treatment 2 + training village volunteers to conduct classes outside school hours

v 12% of the children attended the camps, and this group saw an increase in ASER reading score by 0.6 sd. The impact on treated villages was one-tenth of this (Kapuscinski lecture by Esther Duflo, 24 September 2013)

vi Treatment 1: CAMaL material only (M); Treatment 2: Treatment 1+ teacher training and monitoring (TM); Treatment 3: Treatment 2+ unpaid village volunteers (TMV)

vii Treatment 1: CAMaL material + teacher training and monitoring (TM); Treatment 2: Treatment 1+ unpaid village volunteers (TMV)

viii Preliminary results

ix Treatment 1: Only material delivered periodically to the village; Treatment 2: Treatment 1+ 20-day learning camp every 2 months; Treatment 3: Treatment 1+ 10-day learning camp every month

x Treatment 1: TCAs provide remedial curriculum during school; Treatment 2: TCAs teach remedial curriculum after school; Treatment 3: TCAs randomly split class with teacher to review the teacher’s lessons for a few hours; Treatment 4: civil service teachers are trained to provide small-group instruction targeted at pupils’ actual learning levels

xi Other results that are not so significant are not reported here (see presentation by Jessica Kiessel “Research to Practice”, Kenya, 8 February 2013)

xii And 0.18 sd more after controlling for baseline scores and individual-level covariates
