

LEWIS WINCH

Portable Chainsaw Winch

The Lewis Winch has shown its ability and proven to be robust and reliable as the most widely used portable winch around the world for over 25 years.

Able to be used anywhere you can carry a chainsaw the Lewis Winch is the original and the world's most popular truly portable winch. The LEWIS CHAINSAW WINCH is more than just a handy tool. It forms an essential part of the kit for many hands-on applications. It can go anywhere you can carry a chainsaw and with nothing more than a bit of petrol it'll haul loads all day. Councils use it for clearing gullies and streams, power companies and forestry workers haul cables and lines with it, contractors of all types use it for getting materials into difficult sites. Every tree arborist, selective timber mill and firewood operator either has one or needs one. Perfect for navigating rivers in a jet boat, how else will you get around that waterfall? Landscapers, farmers, and fencing contractors put them to use every day, hauling rocks and materials into position, retrieving livestock, and clearing up after storms. Lewis Winch is the go-to machine when portable pulling power is what's required.

Pulling capacity depends entirely on the size of the powerhead. Maximum single line pull is about 4000 lbs and will be reached with a 90cc saw. Pulls of up to 8,000lb can be achieved by using a pulley block to create a double purchase. The Lewis Winch comes with 150' of 3/16" aircraft cable as standard and all the adapters so you can be sure it'll bolt up to whichever saw you choose, and it'll do so as easily as changing a bar.

FEATURES

- Universal chainsaw adaptor (fits all chainsaws)
- Rugged aluminium housings
- Oil bathed gearbox on precision ball bearings
- Anchor shackle on winch
- Freespool clutch and mechanical band brake

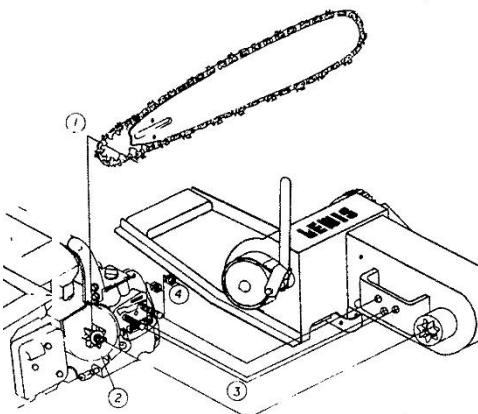

SPECIFICATIONS

- | | |
