

Team Logic IT of Des Moines, IA: Protect your business from disaster with Managed IT

Hurricanes, tornadoes, fires, mudslides and other front-page disasters cost businesses billions in lost time, revenues, and recovery efforts each year. But did you know that a better approach to managing your information technology (IT) can protect your business AND start saving you time and money right now?

As your IT solution provider, we'll help you prepare for sudden or predictable events, and get your systems-and people-back online quickly in the wake of disruptions. Our managed IT services offer you:

- An instant network upgrade—with no upfront cost
- Comprehensive cybersecurity kept up to date at all times
- Proactive management—we fix it before users find it
- Secure remote access so users can work from home without risk

**Avoid costs of up to \$3,000
per site, per disaster**

That's how much it typically costs to install new routers and firewalls at each business location. We can help you get back up and running faster and make sure all of your threat intelligence stays current without the upfront equipment cost.

Why wait for something to break? Upgrade and protect your business assets now.

Why wait for disaster to strike? Upgrade now—without breaking the bank.

Expert help is always available, and looking out for you

Your PCs, servers, Wi-Fi, and cloud services are kept up to date

Staying current with security patches and antivirus systems

Protection against data loss, Ransomware, even natural disasters

Better, safer, "always on" technology experience that makes it easy to manage more locations

How you benefit

In times of emergency, firms with fewer than 20 employees face the greatest challenge because they lack the big IT and facilities budgets. Not to mention the fact that larger companies often take priority when it comes to restoring service.

Our remotely managed services can alert you when service is restored and get your business back online faster, often without anyone coming onsite. We'll help get things back to normal, which means finding and fixing potential issues and threats before they affect your employees and customers.

Computer and Network Management

- ✓ Desktops / systems / application installed
- ✓ PCs and servers kept up to date
- ✓ Remote management prevents issues; speeds resolution
- ✓ Issues resolved before they impact employees and customers

Wi-Fi

- ✓ Secure guest access for waiting areas
- ✓ Continuous, office-wide coverage
- ✓ Tiered employee access for security

Security

- ✓ Firewalls
- ✓ Anti-virus, anti-malware
- ✓ Patch management
- ✓ HIPAA Compliance Report
- ✓ Protection against Ransomware
- ✓ Secure backup
- ✓ Control user access to data, equipment, and Internet

Storage/backup

- ✓ Safeguards data against accidents and catastrophes
- ✓ Secure onsite & offsite backup
- ✓ Long-term data storage

Turn IT from "problem" to "advantage"

For most businesses, having the Internet or phones go down brings virtually everything-billing, data entry, appointment setting, guest access-to a grinding halt. Our service is built to lower your risk, cost, and downtime with an important business advantage: Reliable, flat rate IT solutions that are kept up to date to avoid costly outages.

Remote (VPN) Access

- ✓ Let administrators work from home or other locations—without the usual risk
