

TOP DRIVEN PILING UK & EUROPE

For over 30 years, John Lawrie has been supplying high quality tubulars to the UK and Europe piling markets, making it one of the industry's largest suppliers. During this time, we have supported our clients on a range of projects from housing building and commercial foundations to major infrastructure foundations in the rail and highway sectors.

We hold over 400,000 meters of tubulars across two locations: Montrose, Scotland and Scunthorpe, England. This gives us the capability to respond to any piling requirements quickly and effectively anywhere in the UK and Europe. Our stock sizes range from 73mm diameter to 914mm diameter with a range of wall thickness and lengths.

We provide a range of in-house services along with the tubulars we supply including:

- Inspection
- Cleaning
- Saw Cutting
- Welding/Fabrication
- Threading

These services are all offered in-house from our Montrose facility. If you require our repurposed tubulars to be tested, we offer lab testing from certified third parties.

With a combined knowledge of over 60 years supplying tubulars into various piling sectors our team is well experienced in handling enquiries as well as dedicated to exceptional customer service, offering you the best possible products for your requirements.
