

## Durable, Totally Sustainable Natural Slate

Incomparably durable, distinctively beautiful, definitively authentic and unexpectedly affordable, natural slate is the world's leading natural cladding solution and CupaClad is its leading producer. CupaClad combines the natural benefits of this renowned material with traditional craftsmanship, expertise and environmentally-friendly production methods to create this elegant and durable material.

### MATERIAL

Slate is a material that has withstood the test of time, entirely formed by nature over 500 million years. Each slate panel is truly unique with its individual texture telling the story of the forces that created it.

### SOURCE OF QUALITY SLATE

All CupaClad slate is extracted from one of Cupa's 20-owned quarries in Northern Spain. To put this into perspective, the world's second largest producer of slate oversees just four quarries.

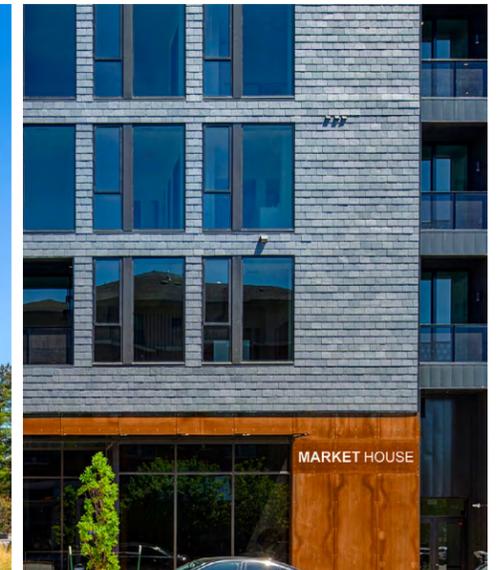

### SUSTAINABILITY

Cupa is a carbon-neutral company offering an ecological option with a lower environmental impact than any other cladding alternative.
