

# Five Tips

## ON PICKING THE RIGHT COLOR SCHEME

### 1 Pick a Color From Your Furniture

The easiest way to pick a color scheme is from starting with something you love. Start with the main piece of furniture whether that be the couch, kitchen table or your favorite vintage piece. Once you have found the key item, start to build your color scheme around it. Mix in colors from patterns or pictures and your space will never be better.

### 2 Showcase Your Personal Style

The most important thing to remember is your home should represent you. A unique house that is filled with colors you love will make you enjoy your space that much more. Take a color from your favorite shirt, or your favorite throw pillow. Picking a color scheme that is unique to you will set you up for success with the rest of the house.

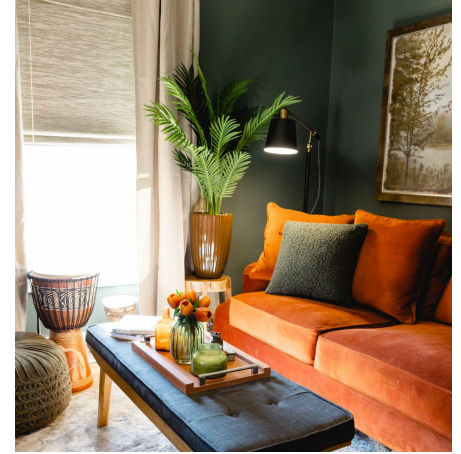

### 3 Start with Asking Questions

Before you decide on any colors, ask yourself what is the goal for the house? For example ask yourself are you wanting it to be vintage or farmstyle? For individual rooms, ask how do you want it to make you feel? Are you going to using the room to relax or entertain? Use all of these questions as a starting point to put together a meaningful color scheme.

### 4 Cool vs Warm Colors

One the most important decisions you can make before decorating is determining whether you prefer cool vs. warm colors. The answer is completely up to you, there is no right or wrong answer. Warm colors are typically more vivid, bright and bold including red, orange and yellow.. Cool colors are associate more with calm, relaxing and soothing such as blues, greens and purples. Pick the set of color that matches you.

### 5 Follow the Rule of Three

To make things easy, you can always follow the rule of three, pick one primary color, and two other complementary colors. This more of a guideline than a rule, it has been said that groups of three are more visually appealing to our eyes and that having a balance of symmetry and asymmetry is key. The three colors can also be thought of in terms of numbers you want 60% of your primary color, 30% of your secondary and a little 10% hint of of your last color.
