

# LSO CONTROL

## WHAT IS LSO CONTROL?

LSO-Control is a liquid plant food containing major, macro, and micro nutrients. This liquid fertilizer is formulated to provide a fast method to boost plants under nutrient stress periods and for correction of nutrient deficiencies. The micro nutrients correct

deficiencies in row crops, and ornamental plants ranging from high organic matter to very low organic matter, and strong acid soils to high alkaline soils.

### Guaranteed Analysis:

- Total Nitrogen . . . . . 12%
- Available Phosphoric Acid . . . . . .4%
- Soluble Potash . . . . . . . . . . 4%
- Sulfur . . . . . . . . . . . . . . . .2%
- Molybdenum . . . . . . . . . . . . 0.0045%

### Derived From:

Ammonium Phosphate, Potassium Nitrate, Potassium Sulfate, Urea, and Sodium Molybdate. Also contains Humic Acid, Seaweed, and other natural plant growth stimulants.

**Not for use in organic crop and organic food production in the State of California**

## Benefits of Using LSO-Control

LSO-Control helps correct nutrient deficiencies. It gives your plants a jump-start and gets them growing quickly during early stages of growth or with pre-bloom sprays.

### Application

LSO Control may be applied by conventional ground rig sprayers or by air. For general use on all crops, apply LSO Control 2-6 quarts per acre for nutrient maintenance. For light deficiency apply 4-8 quarts per acre, and for severe deficiency apply 2-4 gallons per acre.

For additional application directions for alfalfa, broccoli, brussel sprouts, carrots, cauliflower, cabbage, citrus plants, corn, cotton, cucumbers, deciduous fruit and nut trees, grapes, lettuce, celery, melons, onions, peas, beans, peppers, garlic, potatoes, spinach, squash, sugar beets, tomatoes, and eggplant, please see our product label.
