

TRANSPLANT POWDER 20-16-10

WHAT IS TRANSPLANT POWDER?

The main purpose for Transplant Powder is to relieve the stress that plants go through during transplanting. Land & Sea Transplant Powder is a unique blend of natural plant enhancers, also used to stimulate root growth

and provide a healthier beginning for the plants. The natural ingredients in this solution also provide an excellent soil conditioner, promote nutrient uptake, and helps hold moisture in the soil.

BENEFITS OF USING LAND & SEA TRANSPLANT POWDER

Using Land & Sea Transplant Powder will relieve stress due to transplanting, stimulate root growth, help mineralize soil nutrients, regulate nutrient uptake to the plant, and stimulate the biological activity in the soil, plus provide an immediate source of soluble nutrients to get the plant off to a good start.

APPLICATION

Preplant: Add 2 to 3 lbs. mixed with one gallon of water/lb. per acre in the preplant blend or preplant fertilizer. Dilute minimum of 1 to 1 and maximum 100 to 1 for best results.

Transplant or Water Run: Water run 3-5 lbs. per acre twice during early growing stages or during high stress periods. Mix 1 lb./gallon of water.

Land & Sea Transplant Powder contains:

- * 20-16-10 + Micros
- * Humic Acids
- * Seaweed

**Not for use in organic crop and organic food
production in the State of California**
