

# Sciffer Analytics Strengthens Security and Compliance Leveraging Axiom's Services

## Introduction

Reflexion.ai is a comprehensive AI based content analytics platform developed by Sciffer Analytics, where you can upload your videos and dig deeper into the science and art of it.

The client reached out to the Axiom team to secure their platform proactively.

## Customer Requirements

### Web Application, Infrastructure and Source Code Security

The client required to secure their application infrastructure and code to safeguard from vulnerabilities and attacks.

They also wanted to avail pentesting services for their web application.

### ISO Compliance

The client has consulted the Axiom team to get ISO 27001 compliance certified.

## The Solution

The Axiom team is currently conducting penetration testing, providing assessment reports and remediation steps that the client must take to protect their web application and its infrastructure.

The Axiom team also built a DevSecOps framework, implementing security in the DevOps pipeline of the client with the integration of SonarQube and OWASP-ZAP.

To comply with the ISO 27001 certification, the team has deployed the core set of Azure policies that is required for any Azure-deployed architecture that must implement ISO 27001 controls.

## About Sciffer Analytics

Sciffer Analytics is a Singapore based startup that has created Reflexion.ai, an all-in-one platform for broadcasters and media companies to collaborate on content, extract metadata and storyboard.

## Why Axiom?

Axiom, being an Azure Partner, has been providing security solutions to startups and SMBs for more than 5 years.

The company has skilled engineers who are adept at performing security assessments and identifying the security posture of an environment. Using automated and manual processes, the engineers ensure that all risks and vulnerabilities are identified, and a roadmap is created for remediation.

**“Axiom’s team has worked hard and helped us implement DevSecOps and also made our company SOC compliant.”**

**- Karan Kabra**

Co-founder, Sciffer Analytics

## Next Steps

The client will need to implement the recommended security measures to improve the security posture of their applications and to protect themselves from cyberattacks.

## What Our Customer Says

“We needed our security problem to be solved quickly and in the best possible way. Thanks to Axiom’s capable team, we are only days away from a highly secure platform with end-to-end user privacy as well.”

- Karan Kabra  
Co-founder, Sciffer Analytics
