

Axiom Enables TargetClose to perform penetration testing on infrastructure and applications

Challenges

TargetClose required penetration testing performed on its infrastructure and applications. They also needed a vendor who could support them fix the identified issues and train their tech team to avoid the root cause of the problems.

Solution

Axiom has performed penetration testing for three weeks and identified over 30 vulnerabilities. We have also completed CIS Foundational benchmarks for the customer AWS setup. Additionally, we fixed the identified issues and trained the team on OWASP's top 10 best practices.

Outcomes & Results

Identified over 30 vulnerabilities and fixed them. Trained 10+ developer teams on OWASP top 10 Best practices

AWS Tools Used

- AWS Security Hub
- AWS WAF
- Amazon Inspector
- Amazon GuardDuty
- Amazon Macie
