

Are your cloud workloads secure?

The AWS Cloud Security Assessment is a packaged offering from Escala24x7 that examines the security of your AWS environments based on the AWS Cloud Adoption Framework and industry best practices. Escala24x7 Cloud Security experts will assess the maturity of your cloud security and provide prioritized recommendations on what can be improved to secure your business.

Outcomes

Awareness

A summary of security processes and technologies showing the current status of your cloud environments across 90+ aspects

Benchmarks

A comparison between your security performance and industry best practices gleaned from thousands of engagements

Improvement

Identified areas of improvement and next iterations for business and application architectures on AWS

Roadmap

Prioritized task list based on the AWS Cloud Adoption Framework to improve your security maturity

Activities

Key activities led by the Escala24x7 Cloud Security experts:

Person-to-person interviews

- Review of current security posture, controls, and processes
- Discuss possible changes, mitigations, enhancements

Maturity assessment report

- Detailed ratings of processes and technology
- Heat maps, radar charts, table of results for reference
- Prioritized, customized recommendations on next steps
- Organized around 5 core Cloud Adoption Framework categories

Identity & access management

Detective controls

Infrastructure protection

Data protection

Incident response
