

This Garden Window features the all new FlexScreen screen.
The world's first flexible window screen!

Simple Design

No mounting hardware required. FlexScreen is a high performance spring steel frame that is captured in the screen track and can easily be removed from inside the home.

Damage Resistant

FlexScreen is a solid, one-piece frame unlike traditional screens that are hollow frames joined with corner keys. The durable PVC coating is similar to that found on dishwasher racks and outdoor park benches.

Field Serviceable

Torn mesh in the field...no problem. FlexScreen can be re-screened in the field.

Effortless Installation

Simply hold the full screen in your hands...flex the long sides in the middle...and fit FlexScreen into your screen track. For double hung windows, the screen will load into the head first, and for slider windows, the screen will load into one of the jambs first.

Beautifully Invisible

FlexScreen hides in the window screen pocket. You will no longer see the screen frame and will gain more viewing area through the glass. Drastically improves the curb appeal of your windows.

Go to FlexScreen.net and watch the video to see how easy it is to work with!

FLEXSCREEN

Everything you want a screen to be.
