MISSION

Data is now understood as vital for enabling governments, international organizations, civil society, and the private sector to make informed decisions and measure progress in achieving the Sustainable Development Goals. Data itself, however, presents a number of technical, ethical, and political dilemmas, which require a multidisciplinary, inclusive, and cross-sectoral dialogue.

Organized in partnership between the Geneva Graduate Institute, the SDG Lab, and Deloitte, the **Geneva SDG Data Forum** provides a space and facilitates such dialogues in Geneva, a city with a unique ecosystem of organizations working on sustainable development issues.
