Cabbage tree
Ti kouka
Cordyline australis
Photo courtesy of New Zealand Plant Conservation Network

Kauri
Agathis australis
Photo courtesy of New Zealand Plant Conservation Network

Bream Head Conservation Trust has established a planting programme which has seen the planting of over 37,000 trees and plants between 2002 and 2015. Together with pest control, the planting programme has been responsible for the growing health of its forests and profusion of birds in the last decade. See which of the above forest trees you can identify on your next visit.
