

# TURNKEY OFFSHORE INSTALLATIONS

## INTRODUCTION

Conbit provides turnkey installation services for complicated platform extensions and modifications. Our team starts well before the manufacturer or fabricator completes the new module or structure. Our engineers advise on the ability to install during every stage of the process.

In general it can be said that the sooner Conbit gets involved, the smoother the installation will be completed. We pick up the module at the manufacturer and do not leave it out of sight until it is installed at its offshore location.

## ENGINEERING

Conbits' structural engineering background enables us to support the client in major decisions regarding structural integrity during and after the installation. In case the changes require re-certification of the complete offshore asset, Conbit even offers complete Life Time Extension programs.

## PROJECT

- ✓ ENGINEERING
- ✓ PROCUREMENT
- ✓ INSTALLATION

### TRANSPORT & INSTALLATION

Conbit has extensive experience in special lifting. The combination of T&I engineering and well-trained offshore teams offer the offshore industry lifting services with an unique quality assurance. We feel comfortable to work with the lifting resources available offshore, but also with temporary lifting solutions.

Conbit has developed all kinds of lifting systems, which are specifically designed (or configured) to complete a specific installation. We often work with lightweight lift configurations, which deal with weights exceeding 45 metric tons. These lifting configurations are operated with high speed winches to enable the possibility to perform offshore lifts.

### PROJECT MANAGEMENT

Throughout a challenging installation process Conbit offers the required project management. Our project managers are experienced in coordinating all different aspects of the assignment, including transport and sea fastening, offshore crew arrangement, HAZID or other safety aspects, etc. They also coordinate the activities in relation to the different 3rd party certification bodies, such as DNV and Lloyds.

### CONCLUSION

The Conbit team is highly motivated to offer turnkey installation services for the most challenging projects safe and efficient. Our responsibility ends when the module or structure is installed without damages and injuries and with a satisfied customer. This is the objective of every project we start.
