Monthly Report

## Investment approach and Objectives

BDL Rempart is an Equity Long Short fund invested in equities listed on the regulated markets of the European Union and the OCDE Countries. The fund performance relies on a stock picking process, on the long and short sides of the book, driven by fundamentals and a proprietary research. Exposures result from investment ideas.

*The use of these instruments can lead to a leverage effect. This mechanism amplifies the investment capacity. This leverage effect leads to an increased risk of capital loss or potential return.*

## Risk and Return profile

Lower risk, potentially lowr return — Higher risk, potentially higher return

1 2 3 4 5 **6** 7

This indicator represents the risk profile as displayed in the DICI. The risk category is not guaranteed and may change during the month

The investor's attention is drawn to the risk factors of the fund, in particular equity risk, credit risk, liquidity risk, counterparty risk, and risks related to derivatives and counterparties

| | 1 year | 3 years | 5 years |
|---|---|---|---|
| Performance of the fund | 5.1% | 14.8% | 10.0% |
| Fund volatility | 10.8% | 20.7% | 16.5% |
| Sharpe ratio | 0.5 | 0.2 | 0.1 |
| Sortino ratio | 0.7 | 0.2 | 0.1 |
| Calmar ratio | 0.6 | 0.1 | 0.1 |
| Fund Max. drawdown | -9.3% | -32.1% | -34.8% |
| Recovery (in working days) | 161 | 343 | 392 |

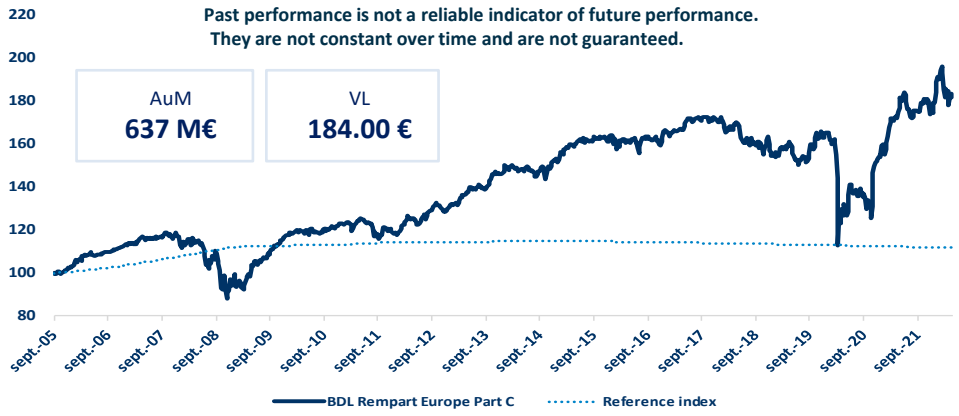
## Monthly Comment

During the period (30/03 - 27/04), the BDL Rempart fund posted a performance of -0.4% against 0.0% for the €STR. The short side generated alpha (1.9%) while the long side and the positive net exposure to the European market (SXXR) destroyed alpha (-1.2% and -1.1% respectively).
During the month, due to the macroeconomic context, the net exposure of the fund was reduced. The managers are hedging the portfolio but still see a dislocation in market valuations. We expect the upcoming first quarter results to help close these gaps.
On the long side, over the period, the SSXR market declined and Telecom Italia was the main detractor (-1.4%) following the withdrawal of the buyout offer by KKR. Just Eat was the second negative contributor (-0.8%) due to downward pressure on technology stocks.
On the shorts side, our baskets covered the portfolio and generated performance. As in February and March, a thematic basket of very expensive companies was the best contributor in April (0.9%). It was followed by a second basket on the same theme (+0.6%). The short position initiated on the CAC 40 index in order to protect itself before the French elections contributed to the performance (+0.3%).



## Calendar Performances

## Monthly Report

### GLOSSARY

**Alpha :** The alpha measures the performance of a portfolio compared to its benchmark. A negative alpha means that the fund has done less well than its indicator (e.g. the indicator has risen by 10% in one year and the fund has only risen by 6%: its alpha is equal to - 4). A positive alpha characterizes a fund that has done better than its indicator (e.g. the indicator has risen by 6% in one year and the fund has risen by 10%: its alpha is equal to 4).
**Bottom-up approach :** Bottom-up investment : Investment based on the analysis of companies, where the history, management and potential of the companies in question are considered more important than the general trends of the market or the sector (as opposed to top-down investment).
**Beta:** Beta measures the existing relationship between fluctuations in the fund's net asset values and fluctuations in the levels of its benchmark. A beta of less than 1 indicates that the fund is "cushioning" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index decreases by 10%). A beta greater than 1 indicates that the fund "amplifies" the fluctuations of its index (beta = 1.4 means that the fund rises by 14% when the index rises by 10% but also falls by 14% when the index falls by 10%). A beta lower than 0 indicates that the fund reacts inversely to the fluctuations of its index (beta = -0.6 means that the fund falls by 6% when the index rises by 10% and vice versa).
**Sharpe ratio:** The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of that return. It is a measure of the marginal return per unit of risk. When it is positive, the higher it is, the more risk is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio has had a negative performance but that it has been lower than a risk-free investment.
**SICAV: Société d'Investissement à Capital Variable (open-ended investment company)**
**Investment rate/exposure rate:** The investment rate corresponds to the amount of assets invested expressed as a % of the portfolio. The exposure rate corresponds to the investment rate plus the impact of derivative strategies. It corresponds to the percentage of real assets exposed to a given risk. Derivative strategies may be designed to increase exposure (boosting strategy) or reduce exposure (immunizing strategy) to the underlying asset.
**Net asset value:** Price of a unit (in the case of a mutual fund) or a share (in the case of a SICAV).
**VaR:** The value at risk (VaR) represents the maximum potential loss of an investor on the value of a portfolio of financial assets given a holding horizon (20 days) and a confidence interval (99%). This potential loss is represented as a percentage of the portfolio's total assets. It is calculated from a sample of historical data (over a period of 2 years**)**
**Alpha** : Bloomberg data.
**Cyclical stocks:** A cyclical stock is, as its name indicates, a stock that will follow a cycle. It is linked to the economic cycle. It will take off in good times of economic recovery or growth and will decline at the slightest downturn. Cyclical stocks therefore have a cyclical evolution.
**Short selling:** Selling forward an asset that one does not hold on the day the sale is negotiated but that one is in a position to hold on the day it is expected to be delivered. If the value of the asset declines after the short sale, the seller can buy it back for cash and realize a capital gain. The potential gain is limited to the value of the asset. If the value of the asset rises, the seller is exposed to an unlimited risk of loss.

### DISCLAIMER

The purpose of this commercial document is to give information in a simple way on the fund's caracteristics. It is intended for French professional investors. This document has been prepared for information purposes only and does not constitute an offer to sell. This document is not and shall not be interpreted or perceived as an offer or solicitation to invest in the fund presented, nor as investment, legal, tax or other advice, nor shall it inspire any investment or decision whatsoever.
