

Lumos AppManager Data Sheet

Get visibility into all your SaaS applications – even those not managed by IT.

25% of app licenses that companies pay for go unused (source). Save your team time and your company money by getting better visibility into all of the apps your employees are using.

With Lumos AppManager, you can discover shadow IT apps, calculate the savings potential, and auto-remove unused licenses all from a single dashboard.

Get a Complete Picture of Your SaaS Spending

Shadow IT Discovery

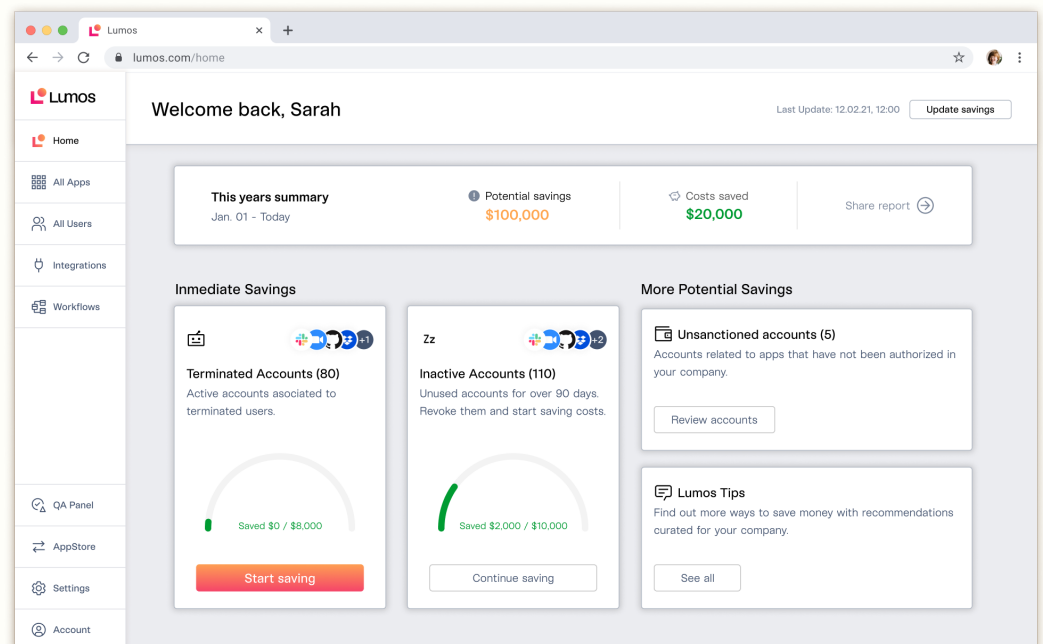

Find apps and identify possible app admins in minutes with AI-powered discovery.

Discover Unused Licences

Identify unused licenses and reallocate them before spending money on upgrades.

SaaS Spend Reporting

Identify unused licenses of active employees or active licenses of terminated users. Reallocate them before spending money to upgrade your license tiers.

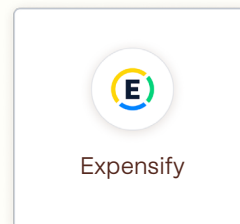

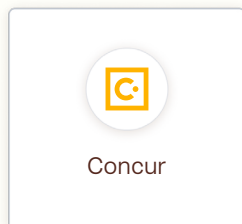

Activity-Based License Removal via Slack

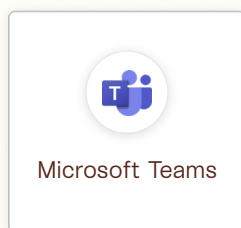

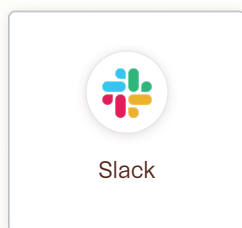

Message employees or app admins to reclaim unused software licenses through email or Slack. Once approved, Lumos automatically downgrades or de-provisions the account.

Integrate with Finance and Expense Tracking Tools

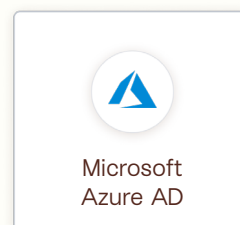

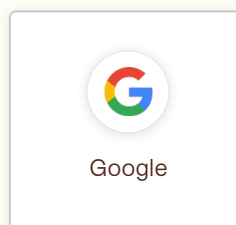

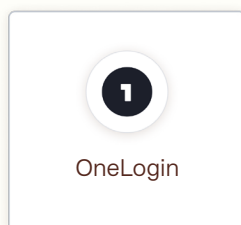

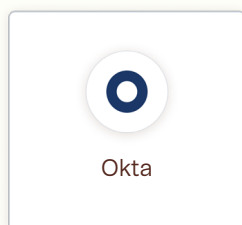

Financial Services & Expense Tracking

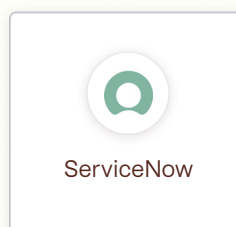

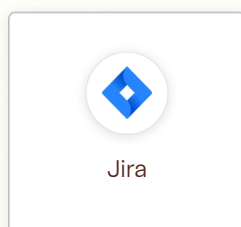

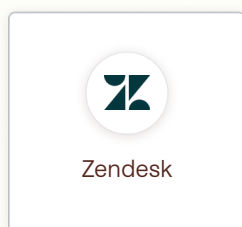

Communication

Identity Providers

IT Service Management

Lumos is a security platform that tackles a crucial problem: driving employee productivity while ensuring compliance. We help fast-growing companies automate processes by combining the power of an enterprise-grade identity governance and administration tool with the visibility and cost management controls of a SaaS management solution. With Lumos, companies get a single solution that enforces compliance and drives employee productivity. [Learn More at Lumos.com](https://lumos.com)
