- 7 An historical example may illustrate this tension. Pope Benedict XVI was widely criticized by the HIV/AIDS and public health communities for his observation that the strategy to reduce HIV/AIDS in Africa via promoting condom use "aggravates" the problem. Nick Pisa, "Anger as Pope Benedict XVI Says Condoms Make AIDS Worse," *The Telegraph*, March 17, 2009, <http://www.telegraph.co.uk/news/worldnews/africaandindianocean/cameroon/5007124/Anger-as-Pope-Benedict-XVI-says-condoms-make-Aids-worse.html>. He focused on the effectiveness of, and morally preferable, behavioral change. A leading HIV/AIDS researcher eventually concluded that the Pope was correct. Edward Green, "Condoms, HIV-AIDS and Africa – The Pope Was Right," *Washington Post*, March 29, 2009, <http://www.washingtonpost.com/wp-dyn/content/article/2009/03/27/>

bioengagement

BIOENGAGEMENT:

6

The promise and perils of advances in technology, science, and medicine have long been fertile fodder for creative works in literature and cinema. Consequently, a variety of resources exist exploring the realm of medical humanities as well as those providing in-depth analysis of a given cultural medium or particular artifact. This column seeks to offer a more expansive listing of contemporary expressions of bioethical issues in the popular media (fiction, film, and television)—with minimal commentary—to encompass a wider

spectrum of popular culture. It will be of value to educators and others for conversations in the classroom, over a cup of coffee, at a book club, or around the dinner table. Readers are cautioned that these resources represent a wide spectrum of genres and content, and may not be appropriate for all audiences. For more comprehensive databases of the various cultural media, please visit our website at cbhd.org/resources/reviews. If you have a suggestion for us to include in the future, send us a note at msleasman@cbhd.org.
