

# Crossover and Walkway Structures

## Safe, Convenient, and Reliable Access

Conveyor and equipment crossovers provide access to floor areas obstructed by conveyors or other industrial equipment. They can be provided with IBC-compliant staircases for egress routes, or steeper OSHA-compliant stairs, ship's ladders or rung ladders for maintenance-only access. Intermediate stairs or ladders can provide user access to aisles between multiple conveyor lines. Choose from bar grating or diamond plate decking, or composite wood flooring over corrugated steel deck.

## Improved Efficiencies

In addition to providing convenience for maintenance and essential egress for employee safety, our conveyor and equipment crossovers increase efficiency by creating direct access to areas that otherwise might only be accessible by taking a longer route around the obstruction.

## Cross a Single Conveyor or Multiple Conveyors

Crossovers are custom designed to cross single or multiple conveyor lines as needed, and are high enough to clear conveyors and product. Crossovers can be designed with a variety of angles of climb to suit your specific application and space requirements.
