

# Kevin Dunbar

+27 82 528 3656 / [hello@kevindunbar.design](mailto:hello@kevindunbar.design)

I have a passion for working alongside like minded individuals to solve real-world problems and bring magical ideas to life.

## EXPERIENCE

### / Product Designer

Names & Faces (YC Company)

**2019-Present**   **3 Years**   **Cape Town/Remote**

I currently lead the design team at Names & Faces where we build visual employee directories and org charts for large companies. In my role, I facilitate the complete design process while working directly with CPO, CEO, and engineering teams. My involvement in new feature development is end to end, personally getting on calls and listening to feedback from our customers, prioritizing feature requests, wireframing & rapid prototyping new ideas. Then I begin with final designs and work with the engineering team to bring the design to life.

The product we built is both a web and mobile app experience, which caters to a variety of use cases and user personas. Other projects for Names & Faces include the creation of the base Names & Faces design and component system in Figma, our admin dashboard, the onboarding process, and the creation of our org chart. I also lead the project to design and build our marketing websites.

### / Product Designer

Peach Payments

**2018**   **1 Year**   **Remote**

Lead the UI & UX for the Peach Payments Shopify Payment Gateway from start to finish for both mobile & web. Starting with wireframing, prototyping, and testing, to designing and working alongside the engineers to build and launch on Shopify. I also Initiated the core components of the Peach Payments Design System on Sketch.

### UI Designer

No Name Yet Studio

**2019**   **1 Year**

- Motion Design
- Rapid Prototyping
- Project Mangement
- UI Design
- Design Systems
- Wireframing
- Communication
- Leadership

## TOOLS

- Figma
- Sketch
- After Effects
- Illustrator
- Webflow
- HTML & CSS
- Photoshop
- Zapier

### / Side Project

Restaurantdeals.co.za

**2021-Present**   **1 Year**   **Cape Town**

In an attempt to learn new tools and processes in the no-code movement, I created a web tool called Restaurant Deals. It is a platform that aims to aggregate all the food and drink specials in my local hometown of Cape Town.

The project aimed to make it as easy as possible to filter restaurant deals based on the day, location, and food type you where looking for. It was built with a strong focus on UX and mobile usability. I built the entire end-to-end platform using zero code.

I designed and built the website in Webflow, managed my database through Airtable & used Zapier to run syncs between the two systems making it easy to manage the 150+ deals.
