

Deliver Immediate Impact and Faster Results Across Your Organization With Customized Dashboards and Mobile Apps.

How does white labeling work?

Ecanvasser's white-label feature enables your team to increase brand credibility with a customizable dashboard and mobile apps.

By adding your logo and colors to your dashboard, apps, emails, and more, your users can log in to a custom interface that has an appropriate and intuitive design.

What can I customize?

- ✓ Direct users to your dashboard with a custom subdomain.
- ✓ Customize your dashboard, Android and iOS apps with your brand's logo and colour scheme.
- ✓ Invite users to your accounts with a branded email and login screen.
- ✓ Send branded emails to customers.
- ✓ Receive a custom favicon with your brand logo.

✓ Build Brand Visibility

Harness the power of white labeling and increase your brand visibility amongst users with your branding and colours throughout the dashboard and mobile apps.

✓ Increase Software Adoption

Strengthen brand loyalty amongst users with custom brand interfaces. Allow your users to associate quality software with your brand rather than Ecanvasser, increasing the stickiness of the tool.

✓ Take Advantage of Expert Work

Eliminate the strain of troubleshooting and the occasional bug fix. The Ecanvasser team will keep improving the white-label solution, so you can keep focusing on organizing with branded products.

✓ Save Development Time and Money

Reduce the resources necessary to develop a new product from scratch. Customize the readily available Ecanvasser software with your branding and gather insights faster.
